Context

There is a clear case for investing in services to support breastfeeding as part of a local child health strategy. This is particularly important for mothers from low income groups, as it is known that they are less likely to breastfeed. Breastfeeding protects the health of babies and mothers, and reduces the risk of illness. (NICE, 2008)

Breast milk is the best form of nutrition for infants, and exclusive breastfeeding is recommended for the first six months (26 weeks) of an infant's life. Thereafter, breastfeeding should continue for as long as the mother and baby wish, while gradually introducing the baby to a more varied diet.

In recent years, research has shown that infants who are not breastfed are more likely to have infections in the short-term such as gastroenteritis, respiratory and ear infections, and particularly infections requiring hospitalisation. In the longer term, evidence suggests that infants who are not breastfed are more likely to become obese in later childhood, which means they are more likely to develop type 2 diabetes, and tend to have slightly higher levels of blood pressure and blood cholesterol in adulthood. For mothers, breastfeeding is associated with a reduction in the risk of breast and ovarian cancers. A recent study also suggests a positive association between breastfeeding and parenting capability, particularly among single and low-income mothers.

Results from the UK Infant Feeding Survey 2010 showed that 83% of women in England breastfed their babies after birth, 78% after two days and 57% at six weeks. The differences between the two sets of results is likely to be due to the fact that the Infant Feeding Survey is based on self-reported information from women who agreed to take part in the survey; and the fact that breastfeeding status is not captured for all infants in the statistics covered in this report

Summary of results

The Q1-4 2013/14 collection of breastfeeding initiation and 6-8 week breastfeeding data was collected directly from maternity service providers and child health information system providers.

138 maternity providers were identified for 12 week & breastfeeding initiation submissions. During Q1 14/15 maternity providers who had not submitted during 13/14 were given a final opportunity to do so as a result we have received data returns covering 133 of these providers Q1-3, an uptake rate of 96%, for Q4 136 providers submitted data, an uptake rate of 99%.

As data submissions are now above the validation limits we have sufficient data coverage to publish an England figure for the Q2-4 2013/14 but not the 13/14 OT figure which was still below the annual validation standard.

111 Child Health Information System (CHIS) providers were identified for 6-8 week breastfeeding prevalence submissions. We have received data returns covering 106 of these providers Q1-4, an uptake rate of 95%.

The level of provider submissions at Q4 was 11% higher than during the pilot submission of Q1-3 data.

In 2013/14 the number of eligible children with no breastfeeding prevalence status recorded was 10.4%. As insufficient data passing the 95% data completeness we are unable to publish the 6-8 week breastfeeding prevalence England figures for Q1-4 2013/14.

Initiation of breastfeeding

In England the annual OT breastfeeding initiation rate was not published due to low data coverage. The annual percentage was 73.9% in 2012/13 and 2011/12 (74.0%) and which was slightly higher than 2010/11 (73.7%), 2009/10 (72.8%) and 2008/09 (71.7%). The Q4 13/14 breastfeeding initiation rate was 73.8%. (Table 1)

In England amongst the 143 CCGs that passed validation in Q4, breastfeeding initiation ranged from 35.1% in NHS Stoke On Trent CCG to 92.4% in NHS City and Hackney CCG (Table 6).

In England amongst the 118 NHS Trusts that passed validation in Q4, breastfeeding initiation ranged from 38.1% in University Hospital Of North Staffordshire NHS Trust to 93.2% in Guy's and St Thomas' NHS Foundation Trust (Table 4).

Prevalence of breastfeeding at 6-8 weeks

The 6-8 week breastfeeding prevalence figures are based on the number of infants recorded by CCG's as totally or partially breastfeeding, as a percentage of all infants due a 6-8 week check.

When making comparisons over time, it is best to limit this to those quarters with high and consistent levels of coverage. There is evidence that the significant improvements in data coverage that were achieved in the early quarters of data collection affected the comparability of the prevalence estimates over time. This is because improvements in coverage have resulted in the inclusion in the statistics of a disproportionately higher number of women who are not breastfeeding.

In England the breastfeeding prevalence at 6-8 weeks was not published in 2013/14 due to the number children with no recorded status of 6-8 week breastfeeding prevalence being greater than 5% of all eligible children.

In 2012/13 prevalence at 6-8 weeks was 47.2%, in 2011/12 47.2% of infants due a 6-8 week check were being breastfed at 6-8 weeks. (Table 2).

In 2013/14 30 CCG's failed to pass validation checks. 68 failed as the number of eligible children submitted failed to meet the -10% +20% number of expected children.

An additional 62 CCG's failed due to more than 5% of their eligible children having no breastfeeding status recorded, among the CCG's that failed on 95% recording coverage validation failures was NHS Richmond CCG where the 6-8 week breastfeeding status of 85.3% eligible children was not known.

Amongst the 81 CCGs that passed validation, breastfeeding prevalence as a percentage of infants due a 6-8 week check ranged from 19.9% in NHS Knowsley CCG to 82.9% in NHS Central London (Westminster) CCG

Notes:

1. Red cells mean that no. of maternities does not meet validation criteria (see definitions sheet for details).

2. Blank cells mean that data do not meet validation criteria (see definitions sheet for details).

3. Shaded cells mean that percentage of mothers' whose breastfeeding status was recorded falls short of data quality standard of 95%.

Notes:

1. Red cells mean that no. of maternities does not meet validation criteria (see definitions sheet for details).

2. Blank cells mean that data do not meet validation criteria (see definitions sheet for details).

3. Shaded cells mean that percentage of mothers' whose breastfeeding status was recorded falls short of data quality standard of 95%.

4. Area Team and England actuals and percentages are calculated including the data from those CCGs who have failed the validation criteria.

Notes:

1. Red cells mean that no. of maternities does not meet validation criteria (see definitions sheet for details).

2. Blank cells mean that data do not meet validation criteria (see definitions sheet for details).

3. Shaded cells mean that percentage of mothers' whose breastfeeding status was recorded falls short of data quality standard of 95%.

4. England actuals and percentages are calculated including the data from those CCGs who have failed the validation criteria.

Notes:

1. Red cells mean that no. of infants due for a 6-8 week checks does not meet validation criteria (see definitions sheet for details).
2. Blank cells mean that data does not meet validation criteria (see definitions sheet for details).
3. Shaded cells mean that percentage of infants whose breastfeeding status was recorded falls short of data quality standard of 95%.
4. Area Team and England actuals and percentages are calculated including the data from those CCGs who have failed the validation criteria.

Notes:

1. Red cells mean that no. of infants due for a 6–8 week checks does not meet validation criteria (see definitions sheet for details).
2. Blank cells mean that data does not meet validation criteria (see definitions sheet for details).
3. Shaded cells mean that percentage of infants whose breastfeeding status was recorded falls short of data quality standard of 95%.
4. Area Team and England actuals and percentages are calculated including the data from those CCGs who have failed the validation criteria.

Notes:

- Red cells mean that no. of infants due for a 6-8 week checks does not meet validation criteria (see definitions sheet for details).
- Blank cells mean that data does not meet validation criteria (see definitions sheet for details).
- Shaded cells mean that percentage of infants whose breastfeeding status was recorded falls short of data quality standard of 95%.
- Area Team and England actuals and percentages are calculated including the data from those CCGs who have failed the validation criteria.

Table 13 : Prevalence of breastfeeding at 6 to 8 weeks, 2013/14 Q4, by CCG and Area Team

Notes:

1. Red cells mean that no. of infants due for a 6–8 week checks does not meet validation criteria (see definitions sheet for details).
2. Blank cells mean that data does not meet validation criteria (see definitions sheet for details).
3. Shaded cells mean that percentage of infants whose breastfeeding status was recorded falls short of data quality standard of 95%.
4. Area Team and England actuals and percentages are calculated including the data from those CCGs who have failed the validation criteria.

Notes:

1. Red cells mean that no. of infants due for a 6-8 week checks does not meet validation criteria (see definitions sheet for details).

2. Blank cells mean that data does not meet validation criteria (see definitions sheet for details).

3. Shaded cells mean that percentage of infants whose breastfeeding status was recorded falls short of data quality standard of 95%.

4. Area Team and England actuals and percentages are calculated including the data from those CCGs who have failed the validation criteria.

Notes:

Blank cells mean that data does not meet validation criteria (see definitions sheet for details).

Drop off rates are calculated as follows (Percentage of mothers initiating breastfeeding MINUS Percentage of infants being breastfed at 6-8 weeks) DIVIDED BY Percentage of mothers initiating breastfeeding

Drop off rates are calculated by using the breastfeeding initiation percentage from the previous quarter compared to the 6-8 week breastfeeding percentage from the current quarter.

Data Quality

Q4 Data submissions are outstanding from the following trusts:

Maternity Providers:

RXQ BUCKINGHAMSHIRE HEALTHCARE NHS TRUST, RWH EAST AND NORTH HERTFORDSHIRE NHS TRUST, RXC EAST SUSSEX HEALTHCARE NHS TRUST, RTE GLOUCESTERSHIRE HOSPITALS NHS FOUNDATION TRUST, RVJ NORTH BRISTOL NHS TRUST, RXK SANDWELL AND WEST BIRMINGHAM HOSPITALS NHS TRUST, RA9 SOUTH DEVON HEALTHCARE NHS FOUNDATION TRUST, RTP SURREY AND SUSSEX HEALTHCARE NHS TRUST, RQW THE PRINCESS ALEXANDRA HOSPITAL NHS TRUST

6-8 weeks:

609 SUFFOLK *due to manual collection of data for Suffolk (Excluding Waveney)*

RFS CHESTERFIELD ROYAL HOSPITAL NHS FOUNDATION TRUST, RC3 EALING HOSPITAL NHS TRUST, OAV NHS NORTH YORKSHIRE AND HUMBER COMMISSIONING SUPPORT UNIT, RBN ST HELENS AND KNOWSLEY HOSPITALS NHS TRUST *as CHIS does not hold 6-8 week breastfeeding prevalence data.*

Data failing validation:

For the 6-8 week breastfeeding prevalence data requested from CHIS across England. In undertaking the pilot & quarter 4 collection data quality concerns were highlighted in the following areas:

- Testing of the denominator figures show 32% of data aggregated to CCG level does not meet the -10% +20% validation standards when compared against recorded ONS births figures
- Testing of the numerator data shows that 42% does not meet the required 95% recording coverage standard, this is where less than 5% of eligible children's 6-8 week breastfeeding status is not being recorded on the CHIS.

Data collection and definition

Breastfeeding initiation

Since April 2003, data on the local breastfeeding initiation has been requested on a quarterly basis, historically from all PCTs. This information provides more timely, frequent and local information on breastfeeding initiation than the Infant Feeding Survey.

Since April 2013 this data is now being collected directly from providers via the data collection tool that is part of Unify2, a web based system set up to collect performance and other central returns directly from the NHS. The figures are obtained from maternity providers from midwives in acute trusts and information recorded at deliveries.

For breastfeeding initiation, each provider is required to submit actual figures for the quarter and year end out turn figures for the following three items:

- the number of maternities.
- the number of mothers initiating breastfeeding.
- the number of mothers not initiating breastfeeding.

Data validation

The following validation rules are applied to the data

All numbers must be submitted as integers.

Number initiating Breastfeeding	+	Number not initiating Breastfeeding	<=	Number of Maternities
Number of Maternities	<	Maximum Office of National Statistics (ONS) reported number of maternities for last year PLUS 20%		
Number of Maternities	>	Minimum Office of National Statistics (ONS) reported number of maternities for last year MINUS 10%		
Number initiating Breastfeeding	+	Number not initiating Breastfeeding	>	95% of Number of Maternities

All validation checks must be passed by Providers in order for the data to meet departmental statistical requirements. Where information has not passed these validation checks, this is identified in the tables in this report by conditional formatting.

Data collection and definition

Breastfeeding at 6-8 weeks

Since April 2008, data on the local prevalence of breastfeeding at 6-8 weeks has been requested on a quarterly basis, historically from all PCTs. This is in addition to data collected on initiation of breastfeeding. This information provides more timely, frequent and local information on breastfeeding prevalence after the mother and baby have been discharged from hospital than the Infant Feeding Survey.

Since April 2013 this data is now being collected directly from child health information system providers via the data collection tool that is part of Unify2, a web based system set up to collect performance and other central returns directly from the NHS. The figures are typically derived by child health records from information recorded at infants' 6-8 week check.

For breastfeeding prevalence, each child health information system is required to submit actual figures for the quarter and the year end turnout figures for the following four items:

- The number of infants due a 6-8 week check in each quarter.
- The number of infants being "totally" breastfed (defined as infants who are exclusively receiving breast milk at 6-8 weeks of age - that is, they are NOT receiving formula milk, any other liquids or food).
- The number of infants being "partially" breastfed (defined as infants who are currently receiving breast milk at 6-8 weeks of age and who are also receiving formula milk or any other liquids or food).
- The number of infants being "not at all" breastfed (defined as infants who are not currently receiving any breast milk at 6-8 weeks of age).

Data validation

The following validation rules are applied to the data:

All four numbers must be submitted as integers.

Number of infants due a 6-8 week check	>=	Number of infants "totally" breastfed + Number of infants "partially" breastfed + Number of infants "not at all" breastfed
Number of infants due a 6-8 week check	<	Maximum National Statistics (ONS) reported number of live births for the last year PLUS 20.0%
Number of infants due a 6-8 week check	>	Minimum National Statistics (ONS) reported number of live births for the last year MINUS 10.0%
Percentage of infants being breastfed at 6-8 week	<	Percentage of mothers initiating breastfeeding

All validation checks must be passed in order for the data to meet departmental statistical requirements. Where information has not passed these validation checks, this is identified in the tables in this report by conditional formatting.
