STATISTICAL PRESS NOTICE NHS OUTPATIENT REFERRALS February 2022

The following statistics showing the number of referrals for first consultant-led outpatient appointments were released today by NHS England and NHS Improvement:

NHS Outpatient referrals (February 2022)

The key points for referrals for specific acute first consultant-led appointments from the latest release are:

- GP referrals made during February 2022 were 937,651, a decrease of 9.0% per working day compared to February 2020 (1,030,152).
- Other referrals (non-GP) made during February 2022 were 678,699, a decrease of 0.7% per working day compared to February 2020 (683,212).

The outpatient referrals data for individual months can be affected by the number of working days. Therefore, where appropriate growth figures are adjusted for the number of working days for comparison: February 2020 and February 2022 both had 20 working days.

From March 2020, referral levels have been significantly impacted by the Covid-19 pandemic. Therefore, comparisons have been made with 2019/20 data (pre-pandemic). Whilst the number of referrals has increased since April 2020, they are still lower than levels seen prior to Covid-19 for GP referrals (see chart below).

Restricted access until 9.30am Thursday 14th April 2022

Full tables showing data for England and individual organisations are available at the link below:

<https://www.england.nhs.uk/statistics/statistical-work-areas/outpatient-referrals/>

Data Quality

All NHS providers submitted data this month.

No providers submitted an estimated return this month.

Revisions

Along with February 2022 data, revisions covering April 2021 to September 2021 data were also published in April 2022. 10 providers submitted revisions across this period resulting in 44 resubmissions in total across these periods. A correction was also published for October 2021 data to amend for a processing error which artificially inflated Northern Care Alliance NHS Foundation Trust's data following its merger with Pennine Acute Hospital NHS Trust.

The revisions have had a minimal impact on the data at a national level. The table below summarises the revisions to the England level figures for Specific Acute GP and Other Referrals.

Period	GP Referrals Made (Specific Acute)		Other Referrals Made (Specific Acute)	
	Original	Revised	Original	Revised
Apr-21	908,586	908,874	703,674	703,557
May-21	921,482	922,045	700,956	701,510
Jun-21	1,017,801	1,018,386	767,408	768,315
Jul-21	968,635	968,740	721,874	722,040
Aug-21	897,617	895,297	662,332	663,424
Sep-21	996,710	993,777	725,835	726,884
Oct-21	971,804	963,295	706,056	698,434

Statistical notes

The data represents a count of outpatient referrals made in a given month.

A consultation took place to seek feedback from users regarding proposals to terminate the Quarterly Activity Return (QAR), and significantly reduce the scope of the Monthly Activity Return (MAR). The rationale was that much of the information could be similarly derived from patient-level data sets, thereby reducing the NHS data collection burden. Responses to the consultation were reviewed and a decision made to retire QAR following the publication of Q4 2019/20 and reduce the scope of MAR to collect referrals information only following the publication of May 2020 data. The consultation and outcome document with further details can be found [here](#).

Restricted access until 9.30am Thursday 14th April 2022

From June 2020 data, the Monthly Referrals Return (MRR) replaced MAR and QAR. Click the link [here](#) to visit the MRR webpage. The MRR is a streamlined version of MAR and QAR focusing on referral elements only. New guidance for Monthly Referral Return was published on the MRR webpage to reflect updated definitions in line with the NHS Data dictionary.

Replacement information covering the consultant-led outpatient and inpatient activity previously collected in MAR and QAR will be published as part of NHS Digital's existing monthly official statistics publication series ([Monthly Hospital Episode Statistics for Admitted Patient Care, Outpatients and Accident and Emergency](#)) released on the same day as the previous MAR data.

Provider and Commissioner based data

Monthly Referrals Return (MRR) is a Provider Commissioner (Prov Comm) collection with Trust and Independent Sector providers submitting their data broken down by Clinical Commissioning Group (CCG) responsible for the patient. Data can therefore be broken down by provider, commissioner or provider and commissioner.

Commissioner-based webfiles show referrals broken down by the commissioner responsible for the patient. They also include data for specialised commissioning. These are separate from the CCGs as there are different arrangements for commissioning specialised services.

Provider-based webfiles cover all English NHS commissioned referrals for patients who were treated in hospitals in England.

GP referrals made (specific acute)

This is a count of the referrals made by GPs (whether doctors or dentists) to consultants for a first outpatient appointment in specific acute treatment functions.

Other referrals made (specific acute)

This is a count of the other (non-GP) referrals made to consultants for a first outpatient appointment in specific acute treatment functions.

Guidance and Definitions

Detailed guidance and technical definitions for the Monthly Referrals Return (MRR) can be found at the link below:
