

## GP Outcome Data

6 December 2013

### Notes to Editors

Most of the information has been available on NHS Choices for some time, and the newer indicators have been in the public domain via the Health and Social Care Information Centre and the GP Patient Survey, but this is the first time that they have all been brought together in an easy-access way.

We have spoken with representatives of RCGP, BMA, CQC, CCGs, HSCIC, NHS Choices Clinical Information Advisory Group (which includes clinicians and patient reps) we have also communicated the developments to National HealthWatch. In the development of the accountability view NHS Choices engaged with patient representatives from charities and local HealthWatch as well as other local accountability forums such as Overview and Scrutiny Committees.

### The 40 indicators newly-available on NHS Choices:

1. Early diagnosis of cancer: percentage of cancer cases referred on the two week wait pathway
2. Cervical smears: percentage of women aged 25-64 who have had a cervical smear in the previous 5 years
3. Diabetes blood pressure levels: percentage of patients with diabetes with blood pressure of 140/80 or less
4. Diabetes cholesterol levels: percentage of people with diabetes with cholesterol less than 5 mmol/l
5. Diabetes retinal screening: percentage of people with diabetes who have a record of retinal screening
6. CHD cholesterol levels: percentage of patients with CHD whose last measured cholesterol is 5 mmol/l or less
7. Atrial fibrillation drug therapy: percentage of patients with atrial fibrillation whose records show they have been prescribed anti-coagulant anti-platelet drug therapy
8. COPD diagnosis: percentage of people with COPD with diagnosis confirmed through spirometry

9. Asthma diagnosis: percentage of people with asthma aged 8 and over diagnosed with measures of variability or reversibility
10. Flu vaccination for older people: percentage of people aged over 65 who have had a seasonal flu vaccination
11. Flu vaccination for at risk groups: percentage of people aged between 6 months and 65 years in clinical risk groups that receive the seasonal flu vaccination
