# Accelerated Access Collaborative

This document explains how NHS England and Improvement and our partners hope to involve patients in our work.

Our team is called the **Accelerated Access Collaborative**.

We are a partnership of lots of health organisations who try to get new treatments to patients faster.

Our work includes supporting research and new technology, medicines or devices to improve healthcare.

# Why is it important to involve patients?

**We want patients to:**

- **Have a say in what research matters most to them.**

- **Help to create new treatments and ways to keep people healthy.**

- **Tell us about new ideas for health care that would matter most to them.**

# The six aims of this Strategy

This strategy is a plan to get more patients and people with lived experience involved in our work.

We have six aims:

1

For lots of people with different lived experience to get involved in our work

2

To focus on health inequalities

3

To work with partners

# The six aims of this Strategy

4

To help people have a positive experience while working with us

5

To understand our impact and outcomes

6

Celebrate our impact

# What will we do?

To achieve our six aims we will:

- Learn from what our partners have found out from listening to patients.

- Support our staff to learn skills to listen to and work with people and communities.

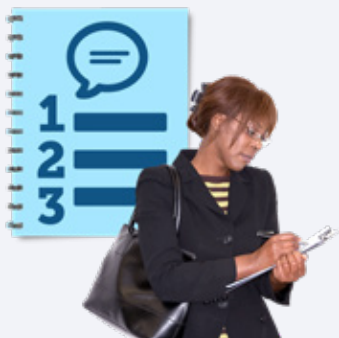

- Provide training and support for our patient partners.

# What will we do?

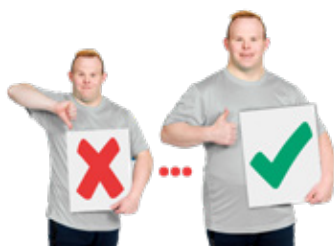

- Make sure that we involve people in lots of different ways so that everyone can take part.

- Keep a record of the all of the involvement work that we do.

This means we can celebrate what is achieved.

We can also learn how to do it better in the future.

# Blue word glossary

## Accelerated Access Collaborative

A partnership of lots of health organisations who try to get new treatments to patients faster.

## Devices

A thing made or adapted for a particular purpose, can be a machine or electronic equipment.

## Health inequalities

Unfair and preventable differences in health.

## Health Research

Trying out ways to get better treatments and health outcomes so that we know what works and what does not work.

## Impact

The effect of an action on someone or something.

# Blue word glossary

## Innovation

A new device, machine or way of doing something.

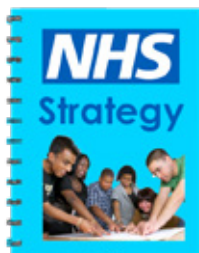

## Lived experience

A person who lives with a health condition and has used health services themselves.

## Patient and public involvement

Involving both patients and the general public in something.

## Strategy

A plan of action designed to achieve a long-term or overall aim.

## Technology

The use of science to invent useful things or to solve problems.
