

Appendix F: Were there any complications following treatment?

The pain continued for longer than anticipated and it transpired this was because of an air pocket in the gum. It actually took about twice as long to return to normal as suggested by the leaflet.
Don't know - not been seen yet.
Couldn't remove one tooth so had to go else where
Pain, not been so comfortable
Severe facial abscess that lead to emergency hospital treatment when it started pressing on my wind pipe.
Not had surgery yet
Part of root broke off
I was given a temporary filling which came out after sever weeks so I was given another. I am being encouraged to have a crown but am unclear why a more permanent filling (that was in before) cannot be used.
Excruciating pain, didn't get stitches so didn't heal properly, got dry socket and infection and ended up going to an emergency dentist with no bedside manner. Very traumatic and hope to never have the other wisdom tooth out.
Not had the surgery yet.
I haven't had the extraction yet
I have to pay privately for my dental care.
Fixed the breses
I felt I suffered nerve damage from the extraction...and had pain in my neck shoulder and back area for a long time after...
A splinter of tooth was left in the cavity after extraction. I first noticed it when it worked its way out of my gum
I ended up in hospital for 3 days with a catastrophic infection. Had drains in my Mouth and was in pain for at least a couple of weeks after this being unable to open my Mouth due to muscle atrophy..
Dry socket
Had to then travel 26 miles for more treatment for dry socket in agony
I developed an infection and had to get antibiotics from my doctor as I was too ill to go back to the dentist.
Severe gum bleeding, pain, receding gum line.
My tooth behind was broken and left as a very sharp shard.
There was infection which was a concern as I had heart surgery 6 months previous. I asked if I should have antibiotics after the surgery but was told not, had them after return visit
A lot of pain and swelling still after 10 days but was advised to carry in with painkillers and ring back to see them if it didn't get any better
Still felt tooth bits had been left behind, but after another appointment was seen asap and told it was clear, and was the jaw bone
A second adjacent tooth was removed that could have been dealt with at the same time as the first. It has left me with a need for a new plate which could have been covered as part of the initial cost
I had to attend hospital as I got sepsis following extraction
Tooth left untreated for too long to be saved dentist had to extract tooth. Had to have a very expensive bridge replacement because it took too long to be seen .
Pain
I had a serious case of dry socket that required a couple of repeat visits to sort out, it took over a month for the docket to heal

Still waiting

Everything healed fairly quickly but the complications began as soon as all the swelling went down as the denture fitted on the day soon became loose. Please see reply to question 9.
