Give your heart a BOOst this Halloween!

By Admin

Pictured above: A new, Halloween themed cardiovascular disease prevention video from NHS Greater Manchester.

As Halloween becomes, as we thought we would with the newsletter by highlighting a [scare and not-scare story](#) from the Greater Manchester Integrated Care Partnership to remind people about cardiovascular disease prevention.

It's a serious message delivered in a humorous way – and we hope that readers people to know more and feel well informed. Our [Cardiovascular](#) section below has more information about the video and the campaign, and you can also find out more about the risk factors and what you can do. Information suggests we may not be alone in this more prevalent in the run up to Halloween.

Content is inevitable to be packed with stories from across our localities, including:

Respiratory – the Network continues work to improve the COPD pathway to encourage people to get vaccinated against flu and pneumonia, and to ensure that they receive the best possible care.

Children and young people – health professionals agree to be very strong children's eye care. Diabetes.

Palliative and end of life – plans launch since new digital tool is helping to identify people in the last year of life so that they can receive the right care at the right time. Information support for our bereaved people.

Frail – Today, for one more which is becoming an innovative ways of improving rehabilitation services. A look at osteoporosis awareness week and the launch of the Greater Manchester Falls Collaborative.

Maternity – Maternity and Neonatal voices Partnership (MNVP) is looking for additional members. A look at osteoporosis awareness week and the launch of the Greater Manchester Falls Collaborative.

Stroke and neurorehabilitation – Network awarded grants for vital work.

Mental health – Plans to improve patient services.

Hundreds of patients getting early help thanks to new prevention tool

A new digital tool rolled out in Greater Manchester in October is helping hundreds of patients to get early help to prevent heart attacks and strokes in the first half alone. The data-driven process to improve their preventative care at GP practices.

Experts in the Greater Manchester Cardiovascular Data Group have developed the tool, which is being rolled out to GP practices in the area by the Greater Manchester Primary Care Transformation Team.

The tool has been developed by the Data Group's clinicians and data analysts, and is being rolled out to GP practices in the area by the Greater Manchester Primary Care Transformation Team.

The tool is being rolled out by Network support team at the beginning in NHS Greater Manchester Clinical Commissioning Group (CCG) and Eastern Cheshire CCG.

It helps to a population level risk identification and can be used by the Greater Manchester practices and practice teams to identify patients who are at risk of developing cardiovascular disease (CVD) – including heart attacks and strokes – and who may benefit from preventative treatment.

Using information from the Quality Outcomes Framework, the tool has identified the practices' figures. There were also investments in the commitment of practice in Greater Manchester and Eastern Cheshire.

In total, the estimated impact equates to 20.1 million in savings to the health and care system over estimates derived from [advanced analytical models published by Public Health England](#).

Dr Peter Rees, Clinical Director for Cardiovascular Disease at NHS Greater Manchester, said: "Every year in Greater Manchester, around 2,000 people – and around 1,000 women – die from heart attacks and strokes.

"Around 1 in 5 heart attacks and that 5 in 10 in Black and South Asian communities. Around 1 in 5 heart attacks and that 5 in 10 in Black and South Asian communities.

"Around 1 in 5 heart attacks and that 5 in 10 in Black and South Asian communities. Around 1 in 5 heart attacks and that 5 in 10 in Black and South Asian communities.

"It's important that we have a way to identify those people who are at risk of developing cardiovascular disease (CVD) – including heart attacks and strokes – and who may benefit from preventative treatment.
