

Multiples make up approximately 1.5% of pregnancies in UK with numbers rising significantly over the past 20 years. Each multiple birth baby is twice as likely to be stillborn as a singleton, and almost five times more likely to die in neonatal care. The latest figures from the Office of National Statistics (ONS) show multiple birth stillbirth rates rose by 13.6% between 2013 and 2014. Research shows that when the NICE guidelines are implemented in full, the rate of stillbirths, neonatal deaths and C-sections is reduced by up to a third. However only 10-18% of UK units have implemented these guidelines in full.

Multiples specific CPD area

We know that having access to quality training to help with professional development is key for you all, yet there is always pressure on budgets and staff availability. We have developed a very special area on our Tamba website that is only available to our Health Professional community. Its available 24/7 FREE to every health professional that signs up. See below.

Version 1 currently contains 6 videos on Intrapartum Care which includes: **The Management of twins in labour: Intrapartum Manoeuvres: Post-Partum Haemorrhage and more.** Check out our first 'Best Practice Webinar' recorded by a Leeds specialist multiples midwife, and coming soon St George's Hospital share the way they set up their multiples clinic.

Watch the videos, reflect on your practice and download a CPD certificate for your professional portfolio

More videos from recent multiples specific events will be coming online soon. Plus the Tamba Maternity Engagement Team are working on further developing this area over the next 3 years. Sign up, use it and then help us improve it.

Also on this page are ALL Tamba's downloadable resources in one easy to access place

Monthly Newsletter
