

## **Primary Care Network: Directed Enhanced Service & Quality Outcomes Framework Quality Improvement**

**Early Diagnosis of Cancer Guidance and Resource Pack  
September 2021**

# How we developed this pack

We have created this guidance and resource pack in collaboration with a number of partners and would like to thank them for providing information and insight.

We would like to acknowledge Dr Chrissie Clayton, Surrey Heartlands Cancer Clinical Lead, for her support in initiating this resource.

**Please note:** the information in this pack is up to date as of August 2021 but may be subject to change. It is advisable to check sources for and further updates.

# Introduction

## Long Term Plan Ambitions

We will continue to transform cancer care so that from 2028:

- An extra 55,000 people each year will survive for five years or more following their cancer diagnosis;
- Three in four cancers (75%) will be diagnosed at an early stage.

The role of primary care across the cancer pathway is vast:

**Improving population health:** teachable moments, lifestyle advice, smoking cessation, encouraging uptake of cancer screening programmes

**Spotting the early signs of cancer and referrals:** people with suspected cancer are promptly referred and informed about their referral pathway

**Safety netting:** putting in place agreed processes, conducting investigative tests, on-going review and follow-up of 2WW non attenders, monitoring of people with non-specific symptoms that do not meet a current referral threshold

**Follow Up and on-going management:** Cancer Care Reviews, acting on treatment summaries, stratified follow-up, secondary prevention, lifestyle advice and managing co-morbidities, spotting recurrence and helping to manage the consequence of treatment

# Introduction to the Surrey and Sussex Cancer Alliance (SSCA)

The Surrey and Sussex Cancer Alliance (SSCA) covers a population of just over 3 million people.

Our members include:

- Surrey Heartlands Health and Care Partnership (ICS)
- Frimley Health Integrated Care System (ICS)
- Sussex Health and Care Partnership (ICS)

The work programme led by SSCA centres on implementing the priorities described in the Long Term Plan relevant to cancer. In collaboration with system partners and through the process of co-production we seek to:

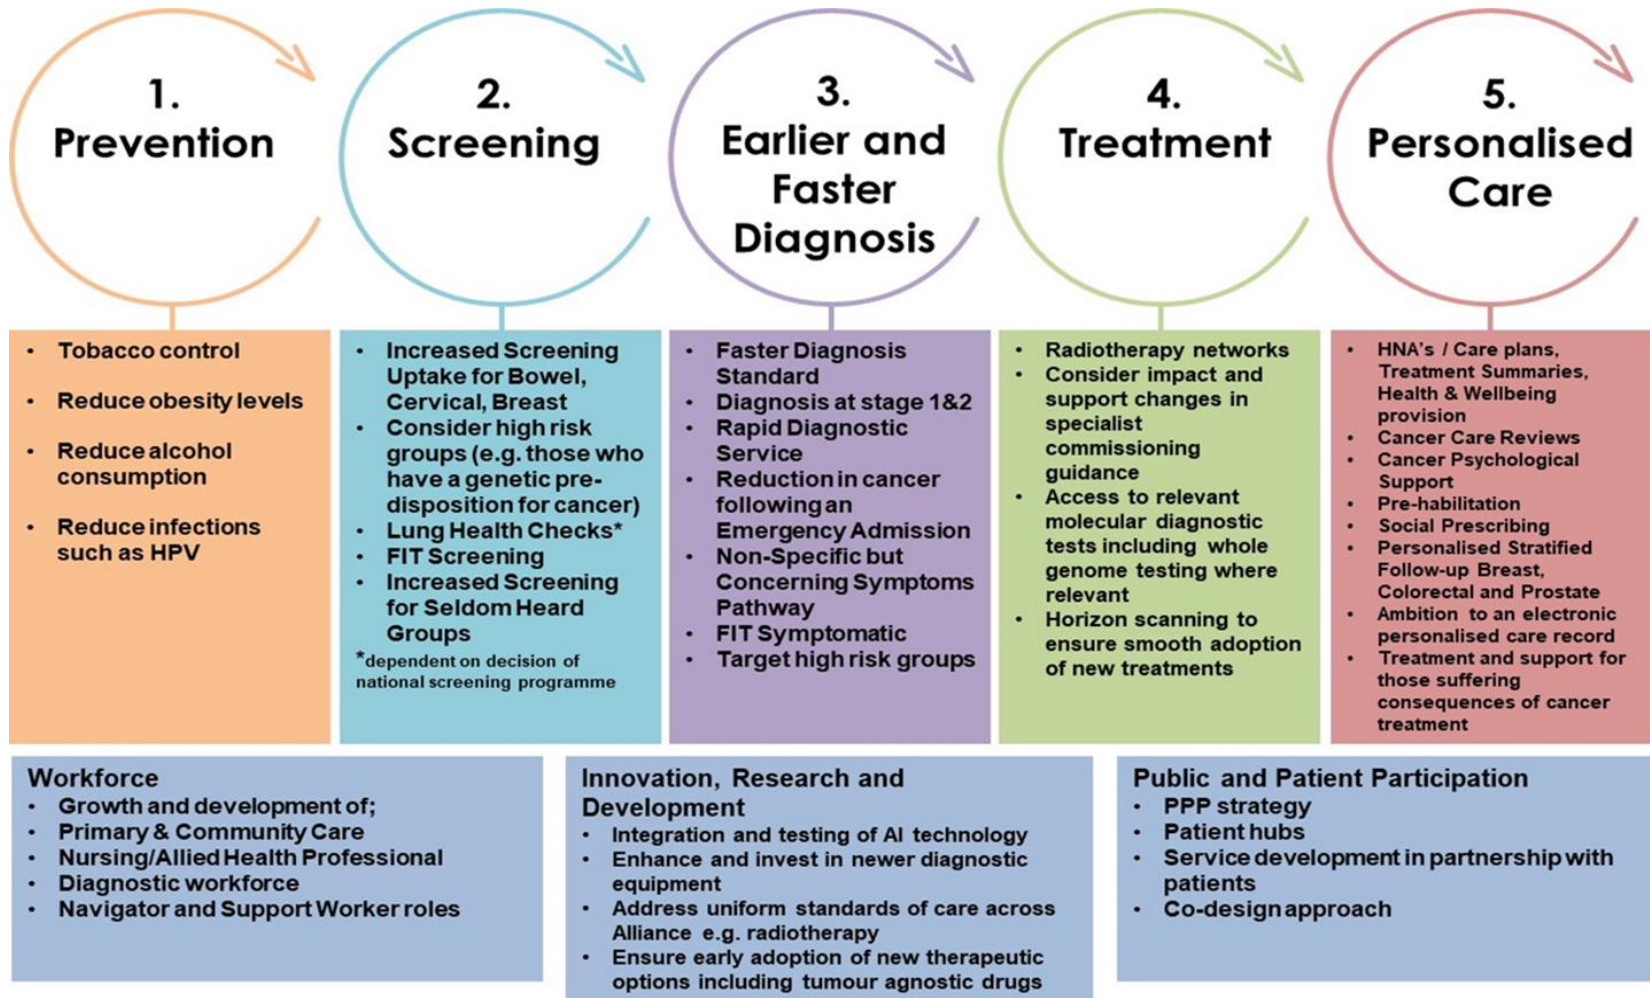

- To reduce variation and inequalities in the delivery of cancer services across Surrey and Sussex
- To improve accessibility of cancer services across Surrey and Sussex
- To improve survivorship and outcomes for patients diagnosed with a cancer
- For patients to have a personalised plan for their cancer treatment and recovery that reflects their wishes

Our response to the Long Term Plan builds on our successes to date and the strong collaboration across our cancer system:

- **Prevention:** We will reduce variation and inequalities in the delivery of prevention services across Surrey and Sussex in order to reduce the incidence of preventable cancers
- **Screening:** We will raise awareness and improve accessibility of screening for bowel, breast and cervical cancers
- **Earlier & Faster Diagnosis:** We will develop Rapid Diagnostic Services and work with our Primary Care Networks to deliver faster and earlier diagnosis
- **Treatment:** We will continue to improve our world-class treatments and services for people with cancer
- **Personalised Care:** We will develop our personalised offer of services and support for people living with and beyond cancer

# Surrey and Sussex Cancer Alliance Workplan 2019-2024

# PCN Directed Enhanced Service & QoF Quality Improvement (QI)

In January 2019, NHS England agreed a new five-year framework for GP contract reform to implement the NHS Long Term Plan. This included a number of improvements to QoF in line with the recommendations of the Review of the Quality and Outcomes Framework in England published in July 2018.

Primary care networks (PCNs) were introduced at the beginning of January 2019 as part of the NHS Long Term Plan, accompanied by significant additional investment.

The Network Contract Direct Enhanced Service (DES) underpins the role of PCNs in empowering general practice within the wider NHS and improving the range and effectiveness of primary care services.

This resource pack has been developed in partnership to provide insights and resources that will support both practices and PCNs as they look to adopt QoF and DES specifications.

[Click here for the PCN DES specification for 2021/22](#)

[Click here for the QoF QI 2021/22 specification](#)

# PCN DES specifications (1)

To achieve the PCN DES specifications, PCNs must review referral practice for suspected cancers, including recurrent cancers and also contribute to improving local uptake of National Cancer Screening Programmes.

## A PCN must:

- Review the quality of the PCN's Core Network Practices' **referrals for suspected cancer**, against the recommendations of NG12 and make use of clinical decision support tools and practice-level data to explore local patterns in presentation and diagnosis of cancer;
- Build on current practice to ensure a **consistent approach to monitoring patients** who have been referred urgently with suspected cancer or for further investigations to exclude the possibility of cancer ('safety netting'), in line with NG12; and
- Ensure that all patients are **signposted to or receive information** on their referral including why they are being referred, the importance of attending appointments and where they can access further support.

## New requirements for 2021/22

- Identify and implement specific actions to **address unwarranted variation and inequality** in cancer outcomes, including access to relevant services.
- Support the restoration of the NHS Cervical Screening Programme by identifying opportunities across a network to provide **sufficient cervical screening sample-taking capacity**

# PCN DES specifications (2)

## They should also:

- Work with local system partners ( Public Health, ICP/CCG and the ICS cancer team) to agree the PCN's contribution to local efforts to improve screening uptake. This should build on any existing actions and must include **at least one specific action** to engage with a group **with low-participation locally**.
- Establish a community of practice between practice-level clinical staff to support delivery of these requirements.
- **New requirement:** Identify successful improvement activity undertaken by constituent practices in support of the 20/21 QOF requirements on early cancer diagnosis. **Ensure that successful practice** is implemented and developed across the PCN.

## A PCN must, through the community of practice:

- Conduct peer to peer learning events that look at data and trends in diagnosis across the PCN, including cases where patients presented repeatedly before referral and late diagnoses.
- Engage with local system partners, including Patient Participation Groups, secondary care, the relevant Cancer Alliance and Public Health Commissioning teams.

# PCN DES specifications (3)

## PCN DES compared with the QoF QI

The PCNs DES and QoF QI are complementary and recognise the pivotal role of primary care within the early diagnosis of cancer.

The QoF QI work is undertaken at an individual practice level whereas the PCN specification applies to a larger population 'at scale' and builds on the QI activity.

At a PCN level, practices can discuss variation, build consensus, implement best practice and hold each other to account. They can potentially benefit from operational economies of scale and a shared primary care workforce.

# PCN DES specifications (4)

## Monitoring and Reporting

The PCN Dashboard on 'NHS ViewPoint' will support PCNs to understand local population health priorities and the benefits they are delivering. It will include indicative data on performance and achievement for the Investment and Impact Fund indicators, as well as PCN service delivery and progress with recruitment. Some indicators draw on data extracted from GP IT systems. The dashboard is refreshed when new data sources are updated providing a consistent and current view. It's accessible to all PCNs and generates shared and comparable views across the country.

### How to access

1. Register for an account with NHS ViewPoint here: [Register through the NHS Insights Platform](#)
2. Complete the registration process
3. Scroll through the list of products and services available, and request access to NHS ViewPoint
4. Once access has been granted navigate to NHS ViewPoint
5. Select 'PCN Report' under the list of reports on the NHS ViewPoint landing page
6. Explore the PCN report

If you have any problems registering please email [england.viewpoint@nhs.net](mailto:england.viewpoint@nhs.net) and they will endeavour to resolve the issue.

Once you are viewing the dashboard, if you have any questions about your local indicators, there is a feedback form and you can email: [england.gpcontracts@nhs.net](mailto:england.gpcontracts@nhs.net)

# PCN DES specifications (5)

## PCN Dashboard Cancer Indicators

- Percentage females, aged 25-49, attending cervical screening within target period (3.5 years) – annual/PHE Fingertips
- Percentage females, aged 50-64, attending cervical screening within target period (5.5 years) – annual/PHE Fingertips
- The proportion of patients who were placed on an urgent referral pathway for suspected cancer where safety netting was recorded – **NEW quarterly CQRS/NCDR extract (using Snomed codes)**

Core Network Practices of a PCN **must use the relevant SNOMED codes** and other agreed approaches, some of which will be included in the Network Dashboard.

Practices will therefore need to ensure that they use the relevant codes and if necessary, re-code patients. The applicable SNOMED codes are available in the relevant business rules published by NHS Digital.

● Cancer safety netting (regime/therapy)

Cancer safety netting (regime/therapy)

Cancer safety netting

### Top Tips

- ✓ Visit the PCN Dashboard and check your local indicators. NB/ this is not currently real time data.
- ✓ Check the new Snomed codes for urgent cancer referrals are coded correctly on your practice system.
- ✓ Review your practice safety netting process and check how each GP codes urgent cancer referrals.

# The QOF QI 2021-22 guidance requires practices to:

## Identify areas for improvement:

This should including assessment of **screening uptake rates**; **referral processes** and **safety netting protocols**

## Create an improvement plan:

This should include increase in the **follow up for screening**; **reduction in inequitable uptake**; increase in **safety netting**; decrease in **time from presentation to referral**

## Implement the plan:

This should include **engagement with external colleagues** (eg. Public health) and **patient groups** where appropriate

## GP Network Peer Review Meetings:

There should be a minimum of **2 GP network peer review meetings**

### Early cancer diagnosis: QOF indicators

**QI005:** The contractor can demonstrate continuous quality improvement activity focussed upon early cancer diagnosis as specified in the QOF guidance (**27 points**)

**QI006:** The contractor has participated in network activity to regularly share activity as specified in the QOF guidance. This would usually include participating in a minimum of two peer review meetings (**10 points**)

# Practice Review

## Screening

- Review screening programme uptake rates for your practice compared to local or national baselines
- You may wish to focus upon inequalities in screening, particularly for those at risk and with low uptake.

## Current referral practice

- You could audit current referral practice by using the National Cancer Diagnosis Audit template or other retrospective audit of recent cancer diagnoses.
- Data sample suggestions: route to diagnosis; referral pathways used, including faster time pathways with tests required in primary care; time from first presentation of symptoms/signs in primary care to referral and investigations; proportion of referrals meeting Faster Diagnostic Standard.
- Aim to audit either a minimum of 20 consecutive cancer diagnoses or a randomly selected sample of at least 20 cases from the previous 12 months.
- Review how the pattern of referrals has changed following the pandemic. Have you seen a reduction and then recovery in the number of referrals for different tumour pathways. Are there differences in referrals for patients seen face to face compared with remote consultations?
- You may want to focus in more depth on cancers such as lung where there is often more unmet need.

## Safety Netting

- Review your current safety netting processes and ensure this is understood by the whole practice team. Consider using the CRUK safety-netting checklist or workbook.

# Creating a plan (1)

## Step 1: Define QI activities that focus on outcomes such as:

- An increase in the follow-up and informed consent/refusal of screening for cervical, breast or bowel cancer.
- A reduction in inequitable uptake of screening in population groups identified by the practice.
- An increase in the proportion of cases where cancer diagnoses are reviewed and learnt from
- A decrease in the time from presentation to referral.
- An increase in the proportion of suspected cancer referrals where a demonstrably robust practice-wide system for safety-netting is used.

We encourage you to seek the views of patients and carers where this will help with quality improvement activity. You could do this through engagement with a patient participation group and/or a survey of patients.

## Step 2: Decide on your AIMS

Write an aims statement of what you want to achieve from your quality improvement project including the timeframe. This will help you to be clear about what your project is and what you want to achieve.

[The NHSEI Guide to developing an AIMS statement is here](#)

Ensure these aims are SMART - specific, measurable, achievable, relevant, and time-bound. Consider what measurements are needed to assess the effectiveness of the change and what data needs to be collected. This should be straightforward to collect regularly.

# Creating a plan (2)

## Step 3: Project Governance

- Project scope – what will and won't be done during the project?
- Establish milestones – What will be done and by when?
- Reporting – who need to see your work? Does it need approval and by which group?
- Project team – who will do what?

PCNs and Practices should implement the improvement plan they have developed to support the objectives they have identified.

## Top Tips

- We recommend that these plans and associated improvement activities should involve the whole team.
- PCNs and Practices are encouraged to engage with colleagues outside the practice where practical, for example public health and the screening service if addressing screening, or secondary care or other local teams e.g. your ICP or ICS Cancer Teams.

# Examples of SMART aims

**1: *Baseline analysis identifies x% of people eligible for screening for y cancer have not responded to invites.***

SMART aim: The PCN/Practice aims to contact z% of non-responders over the next six months providing additional information to support informed decision making about screening.

**2: *Baseline analysis identifies only x% of eligible patients with a learning disability have responded to their screening invite.***

SMART aim: The PCN/Practice aims to contact y% of non-responders with a learning disability over the next six months and provide appropriate support to make informed decisions or best interest decisions as appropriate.

**3: *Baseline analysis identifies only x% of new cancer diagnosis cases are reviewed and learnt from.***

SMART aim: The PCN/Practice aims to increase the % of new cancer diagnosis cases which are reviewed and learnt from, by y% to z%, over the next six months.

**4: *Baseline analysis identifies an average of x days from initial presentation to date of referral.***

SMART aim: The PCN/Practice aims to decrease the time from initial presentation to referral to under y days over the next six months. Consider tests and datasets required for faster timed pathways. (This may not be an ideal choice for smaller practices or where high-quality audit data is not available).

**5: *Baseline analysis identifies the proportion of suspected cancer referrals with systematic safety netting to check they are seen in secondary care as x%.***

SMART aim: The PCN/Practice aims to increase the proportion of referrals with systematic safety netting to y% over the next six months.

# Peer Review

Practices are required to take part in a minimum of two local GP PCN peer review meetings for the QOF QI.

Ideally, the first peer review meeting should take place early in the QI activity and could focus on:

- Sharing the outputs of the audit and baseline work to understand the issues for each PCN/Practice.
- Validation of PCN/Practice improvement plans and targets.
- Alignment with the wider cancer activities and local priorities.

The second peer review meeting should take place towards the end of the QI activity and could focus on:

- Celebrating success and sharing of key changes made in PCN/Practice.
- Encouraging a compassionate, no-blame and active learning culture.
- How these changes have been embedded and will be sustained.

# Safety-netting diagnostic process

Cancer touches the lives of everyone. 50% of all people born since 1960 will be diagnosed with cancer in their lifetime and the other 50% will undoubtedly be affected by the cancer diagnosis of a loved one. In 2014, 17,700 people were diagnosed with cancer in Surrey and Sussex, and cancer was responsible for 7,700 deaths in the region.

Furthermore, patient demand for cancer services is increasing. In 2017/18, almost 2 million patients nationally were referred by their GP for suspected cancer, equating to more than 5,000 patients every day. When compared to five years ago, this is an increase of almost 60%.

## **The challenge of recognising cancer symptoms**

Patients often present with symptoms that could indicate a new cancer diagnosis. Some will be easily recognised as potentially serious and acted upon, but many will be non-specific or vague e.g. fatigue, weight loss or abdominal pain.

The non-specific, undifferentiated nature of cancer symptoms is a key challenge to early diagnosis and part of the reason why so many cancers are diagnosed at a late stage, when the chance of a successful outcome is lower. Safety netting is an essential process to help manage uncertainty in the diagnosis and management of patients by providing information for patients and organising follow-up after contact with a health professional.

Safety netting is the diagnostic management strategy that ensures patients are monitored throughout the diagnostic process until their symptoms or signs are explained and results have been acted upon.

# GP Support Tools (1)

## Source

## Resource

**Ardens is a clinical decision support tool for SystmOne & EMIS Web which:**

- Gives clinicians easy access to the latest evidence-based resources.
- Promotes best practice, medicines management and patient safety
- Improves efficiency, maximises savings and frees up valuable resources
- Ensures localised standardised care is provided with supporting clinical pathways
- Assists contract management and accurate service evaluation
- Provides solutions for referral capacity and demand management
- Supports in upskilling staff including HCAs and nurses

**DXS International provides NHS approved clinical support solutions for clinicians and patients, to improve outcomes, reduce costs and save lives:**

- Point of Care - Clinical decision support – managing information overload in general practice
- Complete Care - Clinical templates and referral forms for EMIS Web and SystmOne – navigating complex consultation workflows

**C the Signs uses the latest, regional and national (NICE) guidelines to help GPs identify and manage patients at risk of early cancer:**

- Sign posting to the most appropriate test, investigation
- Fully localised and configured to CCGs and local Trusts
- Digital 2WW forms are integrated into the tool, ensuring latest forms available
- Automated safety netting to track and monitor patients on cancer pathway
- Embedded patient information leaflets

# CRUK Facilitator Support

## CRUK Facilitator Surrey & Sussex

Building on the work of Cancer Research UK in Surrey and Sussex over the past 5 years, SSCA has funded a CRUK health professional facilitator to work with PCNs to support and promote the early diagnosis of cancer.

Rachel Hinxman can provide free, tailored, facilitation and support at PCN meetings, learning sessions and workshops on the following:

- Practical advice on meeting the PCN DES and QoF QI on early cancer diagnosis
- Help with understanding PCN-specific cancer data (Fingertips Cancer Profiles) and NCDA reports
- Education sessions on safety netting and QI tools
- Awareness sessions for non-clinical staff on cancer prevention and screening programmes
- Assist with quality improvement projects and creating an improvement plan
- Signpost to toolkits and evidence for healthcare professionals
- Access cancer information resources for patients

To find out more about how we might be able to help, please email [rachel.hinxman@cancer.org.uk](mailto:rachel.hinxman@cancer.org.uk).

We hope that you find this pack useful as you start work towards the QoF QI and PCN DES Specifications in 2021-22.

If you have any questions, please contact us through our email:  
[rsch.sscaadmin@nhs.net](mailto:rsch.sscaadmin@nhs.net)
