

# Nelarabine

## Indication

Treatment of patients with T-cell acute lymphoblastic leukaemia (T-ALL) and T-cell lymphoblastic lymphoma (T-LBL) whose disease has not responded to or has relapsed following treatment with at least two chemotherapy regimens.

Funding must be approved prior to commencing treatment.

## ICD-10 codes

Codes with a prefix C83.5, C91.5

## Regimen details

Day	Drug	Dose	Route
1,3 and 5	Nelarabine	1500mg/m <sup>2</sup> /day	IV infusion

## Cycle frequency

21 days

## Number of cycles

Usually 1-2 cycles

## Administration

Nelarabine is administered as an IV infusion over 2 hours. It is available as 50mL vials containing 5mg/mL and the solution should not be diluted but transferred into an empty infusion bag for administration.

## Pre-medication

Prehydration may be required if bulky disease (e.g. 1000mL sodium chloride 0.9% over 4-6 hours)

## Emetogenicity

This regimen has moderate emetic potential.

## Additional supportive medication

Allopurinol 300mg OD (100mg OD if CrCl < 20mL/min)

Antiemetics as required

Antiviral, antifungal and PCP prophylaxis

## Extravasation

Nelarabine is neutral

### Investigations – pre first cycle

Investigation	Validity period
FBC	14 days
U+Es (including creatinine)	14 days
LFTs	14 days
LDH	14 days
Calcium	14 days
Magnesium	14 days
Glucose	14 days

Viral screen: Hepatitis B core antibody, hepatitis BsAg, hepatitis C antibody, EBV, CMV, VZV, HIV 1+2.

### Investigations – pre subsequent cycles

Investigation	Validity period
FBC	96 hours
U+Es (including creatinine)	96 hours
LFTs	96 hours

### Standard limits for administration to go ahead

If blood results not within range, authorisation to administer **must** be given by prescriber/ consultant

Investigation	Limit
Neutrophils	$> 1.5 \times 10^9/L$
Platelets	$> 50 \times 10^9/L$
Creatinine clearance	$> 50\text{mL/min}$

### Dose modifications

#### • Haematological toxicity

If haematological parameters outside of normal range discuss with consultant prior to go ahead.

#### • Renal impairment

Nelarabine has not been studied in renal impairment. There is insufficient data to support a dose recommendation for CrCl  $< 50 \text{ mL/min}$ . Discuss with consultant.

#### • Hepatic impairment

Nelarabine has not been studied in patients with hepatic impairment. Treat with caution.

#### • Other toxicities

##### Neurological reactions:

Severe neurological reactions have been reported with the use of nelarabine. These reactions have included altered mental states including severe somnolence, central nervous system effects including convulsions, and peripheral neuropathy ranging from numbness and paresthesia to motor weakness and paralysis. There have also been reports of reactions associated with demyelination, and ascending peripheral neuropathies similar in appearance to Guillain-Barré Syndrome. Patients must be closely monitored for such reactions and **nelarabine discontinued at first sign of reaction  $\geq$  grade 2.**

Patients treated previously or concurrently with intrathecal chemotherapy or previously with cranio-spinal irradiation are potentially at increased risk for neurological adverse events and therefore concomitant intrathecal therapy and/or cranio-spinal irradiation is not recommended.

**Adverse effects** - for full details consult product literature/ reference texts

- **Serious side effects**

Myelosuppression  
Severe neurological events  
Rhabdomyolysis

- **Frequently occurring side effects**

Myelosuppression  
Tumour lysis syndrome  
Deranged electrolytes  
Confusion  
Seizures  
Paraesthesia  
Peripheral neuropathy  
Headache  
Blurred vision  
Cough, dyspnoea  
Diarrhoea, constipation  
Nausea, vomiting  
Altered LFTs  
Myalgia, arthralgia  
Oedema  
Fatigue

**Significant drug interactions** – for full details consult product literature/ reference texts

Concomitant administration of nelarabine in combination with adenosine deaminase inhibitors, such as pentostatin is not recommended. Concomitant administration may reduce the efficacy of nelarabine and/or change the adverse event profile of either active substance.

**Additional comments**

This medicinal product contains 1.725 mg/ml (75 micromols) of sodium. To be taken into consideration by patients on a controlled sodium diet.

Patients should be advised to use effective methods of contraception during treatment and for at least three months following cessation of treatment.
