Devon School Aged Immunisation Pathways for the 2021/22 academic year
Introduction

This information aims to support local practices in understanding the school aged immunisations programme for the 2021/22 academic year, including any changes to the schedule. We hope you find this information useful and clear: if you have any comments, suggestions or queries please contact the South West Screening and Immunisations Team on england.swscreeningandimms@nhs.net.

COVID-19

During the 2020/21 academic year, due to the impact of COVID-19 and school closures, the school aged immunisation provider offered catch-up doses of MenACWY, Td/IPV and HPV to those cohorts that missed their scheduled doses in the 2019/20 academic year. Recovery activity has now been completed, and the provider will return to business as usual activity for the 2021/22 academic year. Further details are provided below.

Overview of School Aged Immunisations

From September 2021, the following immunisations will be delivered by the school aged immunisation provider:

- Influenza: Reception up to Year 11 in mainstream schools, and reception up to but not including 18 years old in special schools
- HPV dose 1: Year 8 girls and boys
- HPV dose 2: Year 9 girls and boys
- Men ACWY: Year 9 girls and boys
- Td/IPV: Year 9 girls and boys

Devon school aged immunisation clinic schedule

The community clinic schedule for the Devon school aged immunisations provider is available on the school aged immunisation provider’s website:
https://wiltshirechildrensservices.co.uk/immunisation-service/
GP Checklist

☐ Check that all data on immunisations delivered by the school aged immunisation provider that has been sent to you has been uploaded onto your GP practice patient records.

☐ Check that all data on immunisations you have given in your practice has been sent to the Child Health (CHIS) team. This includes any vaccination from the routine schedule given as a travel vaccination. If you are unsure, send it again or contact the Child Health (CHIS) team to discuss this with them.

☐ You will receive a summary report of any students with routine immunisations outstanding who are now outside of the school programme. These children will receive a letter from CHIS asking them to make an appointment with their GP practice.

☐ Review how young people are invited for vaccinations at your surgery and whether this meets their needs. Points to consider:

- Are the sessions outside of school hours?
- Can the young people get to your surgery for the appointments?
- Consider evening or weekend sessions for parents to be able to attend appointments too.
- Are you sending patient information leaflets (PILs) to ensure young people are aware of what they are being invited for?
- Are you using text messaging reminders?

☐ Make sure you are promoting school aged immunisations through leaflets, posters and through links on your website.
Which flu vaccine should children and young people have?

There are 3 types of flu vaccine available for children and young people in 2021 to 2022 – the nasal spray live attenuated influenza vaccine (LAIV), the injected inactivated egg grown influenza vaccine (QIVe) and the injected inactivated cell grown influenza vaccine (QIVc). This chart indicates which vaccine they should have.

**What is the child or young person’s age?**

<table>
<thead>
<tr>
<th>under 6 months of age</th>
<th>6 months to under 2 years</th>
<th>2 years to less than 16 years of age</th>
<th>16 years to less than 18 years of age</th>
</tr>
</thead>
<tbody>
<tr>
<td>Under 6 months of age they are too young to have the flu vaccine (this is why it is important that expectant mothers have a flu vaccination; pregnant women can have the flu vaccine at any stage of their pregnancy)</td>
<td>Are they in an at-risk group?</td>
<td>Is the nasal spray vaccine contraindicated or otherwise unsuitable?</td>

- **They should have the injected inactivated quadrivalent influenza vaccine QIVe (egg-grown).** Children in this age group who have never had a flu vaccination will need 2 doses 4 weeks apart.
- **They should have the injected Quadrivalent influenza vaccine cell grown (QIVc)**. Children aged up to 9 years in an at-risk group who have never had a flu vaccination will need 2 doses 4 weeks apart.
- **They should have the nasal spray vaccine**.
- **They are not eligible for the flu vaccine**.
- **They should have the injected Quadrivalent influenza vaccine cell-grown (QIVc)**.
- **They should have the nasal spray vaccine**.

- Green Book Influenza Chapter 19

The vaccine will be offered to girls and boys in school year 8 (12 to 13-year-olds) as part of the school-aged immunisation programme from 1 September 2021.

**Vaccination process for HPV**

**Year 8 children**, both boys and girls will be invited to attend a vaccination session for their first HPV dose. If they miss this session, they will be invited to a mop-up session by the school aged immunisation provider.

**Child misses HPV**

**Child attends session and receives HPV**

Any year 8 child who misses HPV will be called to a mop-up session run by the school aged immunisation team.

**Information passed to CHIS**

**Year 9 girls and boys** will be invited to attend a vaccination session for their second dose. If they miss this session, they will be invited to a mop-up session by the school immunisation team. If a year 9 child has not received a HPV dose before, the school aged immunisation provider will try to deliver both doses by the end of year 9.

**Child misses HPV**

**Child attends session and receives HPV**

The school aged immunisation team will attempt to catch-up any child who misses HPV up to the end of year 9.

**Information passed to CHIS**

Once in **Year 10**, any young people who have missed their HPV vaccinations must contact their GP to be immunised.

GP practices can provide HPV vaccinations to adolescent girls and boys who have attained the age of 14 years but who have not attained the age of 25 years who have missed vaccination under the schools programme. Please note that vaccination of boys commenced in 2019/20 without a catch-up programme, therefore GPs should only vaccinate boys born on or after 1st September 2006.

**NOTE**: Those starting the vaccination on or after the age of 15 years will require three doses of vaccine to complete the course.
Vaccination Process for Meningitis ACWY

Older groups eligible through opportunistic vaccination

Men ACWY vaccination should be offered by GP practices to eligible young adults aged 17 or older on an opportunistic basis or who self-present at the GP practice; unless immunisation is contraindicated.

Eligible patients must be under the age of 25 years at the time of vaccination and include:

1. those attending university/further education for the first time at the time of vaccination;
2. those aged 19 years on 31 August 2021;
3. those eligible from August 2015 remain eligible up to the day before their 25th birthday;
4. those vaccinated at any time during the period 1 April 2021 to 31 March 2022.
Vaccination Process for Td/IPV (Teenage Booster)

Children in year 8 or younger should not be routinely offered Td/IPV until they have reached year 9 where this will be offered by the school aged immunisation team.

Td/IPV should ideally be given 10 years after the first booster (around 13 years 4 months). However, there may be circumstances where young people require this before year 9.

Is there a reason that the child should receive vaccination before the school age offer is made in year 9 (e.g. travel abroad)?

Yes

GP Practice to vaccinate with TD/IPV

No

Explain child will be offered vaccination in school year 9

Year 9 children will be invited to attend a vaccination session. If they miss this session, they will be invited to a mop-up session by the school aged immunisation team.

Child misses Td/IPV

The school aged immunisation team will attempt to catch-up any child who misses Td/IPV up to the end of year 9. If the child is in year 10 they can receive vaccination at their GP Practice.

Child attends session and receives TD/IPV

Information passed to CHIS

The GP will be responsible for opportunistic delivery of missed Td/IPV vaccinations in year 10 children and older.

Please refer to the Green Book and the incomplete vaccination schedule for further information.
