

Dorset School Aged Immunisation Pathways for the 2021/22 academic year

Introduction

This information aims to support local practices in understanding the school aged immunisations programme for the 2021/22 academic year, including any changes to the schedule. We hope you find this information useful and clear: if you have any comments, suggestions or queries please contact the South West Screening and Immunisations Team on england.swscreeningandimms@nhs.net.

COVID-19

Due to the impact of COVID-19 in 2020 many doses of HPV1 were unable to be given for the 2019/20 cohort. Further delays due to school closures in the first few months of 2021 meant that it was not possible to give both doses of HPV by the end of the 2020/21 academic year and ensure a gap of at least 6 months between them. As a result those students who were scheduled to receive their HPV2 dose in 2020/21 season and were not able to will be caught up by the programme in this 2021/22 academic year.

Overview of School Aged Immunisations

From September 2021, the following immunisations will be delivered by the school aged immunisation provider:

- Influenza: Reception up to Year 11 in mainstream schools, and reception up to but not including 18 years old in special schools
- HPV dose 1: Year 8 girls and boys
- HPV dose 2: Year 9 girls and boys (and HPV2 for 2020/21 recovery cohort)
- Men ACWY: Year 10
- Td/IPV: Year 10

Please note that the flu clinic schedule for the Dorset school aged immunisations provider is available at the end of this document.

GP Checklist

- Check that all data on immunisations delivered by the school aged immunisation provider that has been sent to you has been uploaded onto your GP practice patient records.**
- Check that all data on immunisations you have given in your practice has been sent to the Child Health (CHIS) team.** This includes any vaccination from the routine schedule given as a travel vaccination. If you are unsure, send it again or contact the Child Health (CHIS) team (DORSET.CHID@nhs.net) to discuss this with them.
- Review how young people are invited for vaccinations at your surgery and whether this meets their needs. Points to consider:**
 - Are the sessions outside of school hours?
 - Can the young people get to your surgery for the appointments?
 - Consider evening or weekend sessions for parents to be able to attend appointments too.
 - Are you sending patient information leaflets (PILs) to ensure young people are aware of what they are being invited for?
 - Are you using text messaging reminders?
- Make sure you are promoting school aged immunisations through leaflets, posters and through links on your website.**

Which flu vaccine should children and young people have?

There are 3 types of flu vaccine available for children and young people in 2021 to 2022 – the nasal spray live attenuated influenza vaccine (LAIV), the injected inactivated egg grown influenza vaccine (QIVe) and the injected inactivated cell grown influenza vaccine (QIVc). This chart indicates which vaccine they should have.

What is the child or young person's age?

under 6 months of age

Under 6 months of age they are too young to have the flu vaccine (this is why it is important that expectant mothers have a flu vaccination; pregnant women can have the flu vaccine at any stage of their pregnancy)

6 months to under 2 years

Are they in an at-risk group?

Yes

They should have the injected inactivated quadrivalent influenza vaccine QIVe (egg-grown). Children in this age group who have never had a flu vaccination will need 2 doses 4 weeks apart

No

They are not eligible for the flu vaccine

2 years to less than 16 years of age⁽ⁱ⁾

Reception class to school year 11

Is the nasal spray vaccine contraindicated or otherwise unsuitable?

Yes

They should have the injected Quadrivalent influenza vaccine cell grown (QIVc)⁽ⁱⁱ⁾⁽ⁱⁱⁱ⁾. Children aged up to 9 years in an at-risk group who have never had a flu vaccination will need 2 doses 4 weeks apart

No

They should have the nasal spray vaccine

16 years to less than 18 years of age

Are they in an at-risk group?

Yes

Is the nasal spray vaccine contraindicated or otherwise unsuitable?⁽ⁱⁱⁱ⁾

Yes

They should have the injected Quadrivalent influenza vaccine cell-grown (QIVc)

No

They are not eligible for the flu vaccine

No

They should have the nasal spray vaccine

(i) • Aged 2 and 3 years on 31 August 2021
 • School aged children from Reception Year up to Year 11 (aged 4 to 15 years on 31 August 2021). Children outside these age ranges (for example, a child has been held back a year) may be vaccinated with their peers
 (ii) This season QIVc (and not QIVe) has been procured for this group
 (iii) If the parent of an eligible child declines LAIV because of its porcine gelatine content (and they understand that it is the most effective vaccine for children), they can request an alternative injectable vaccine. QIVc is available to order from ImmForm for these children

Vaccination Process for HPV

(see page 1 for COVID-19 catch-up cohort details)

The vaccine will be offered to girls and boys in school year 8 (12 to 13-year olds) as part of the school-aged immunisation programme from 1 September 2021.

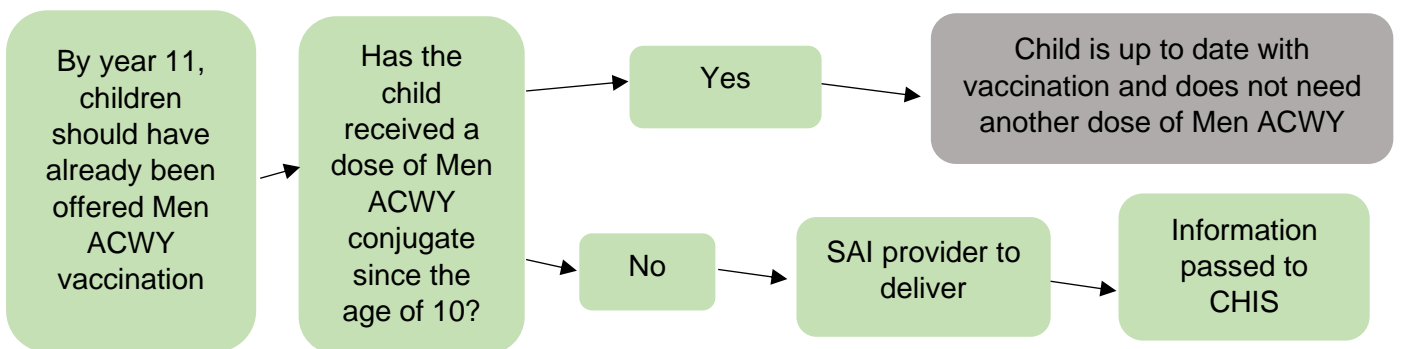

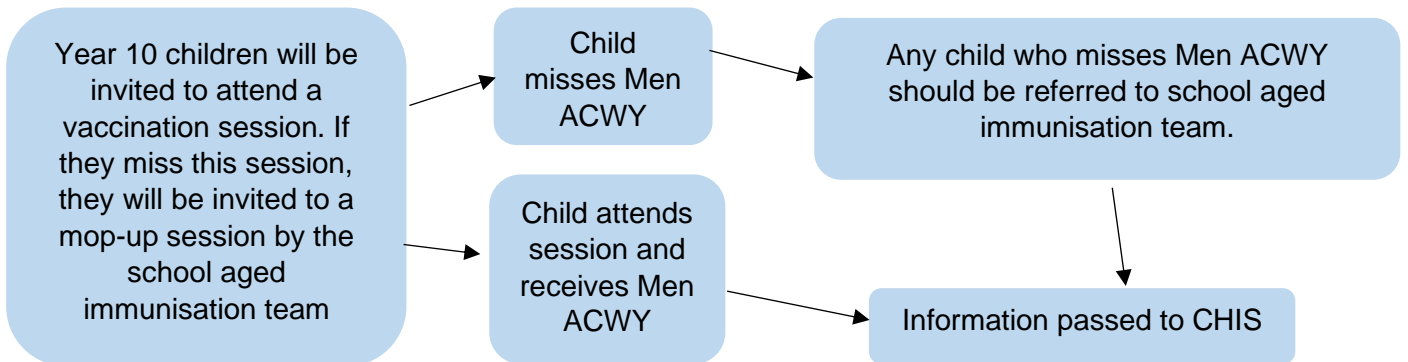

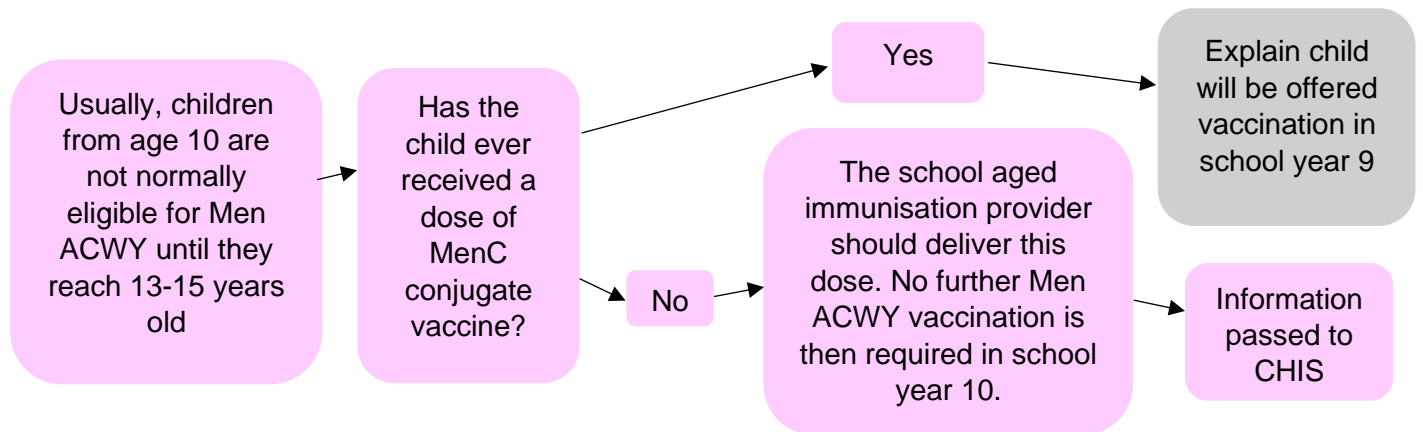

The school aged immunisation provider will deliver any outstanding HPV doses up until Year 11 or a child turns 16. **The GP will be responsible for the delivery of missed HPV vaccinations in Year 11 students and older.**

GP practices can provide HPV vaccinations to adolescent girls and boys who have attained the age of 14 years but who have not attained the age of 25 years who have missed vaccination under the schools programme. Please note that vaccination of boys commenced in 2019/20 without a catch-up programme, therefore GPs should only vaccinate boys born on or after 1st September 2006.

NOTE: Those starting the vaccination on or after the age of 15 years will require three doses of vaccine to complete the course.

Vaccination Process for Meningitis ACWY

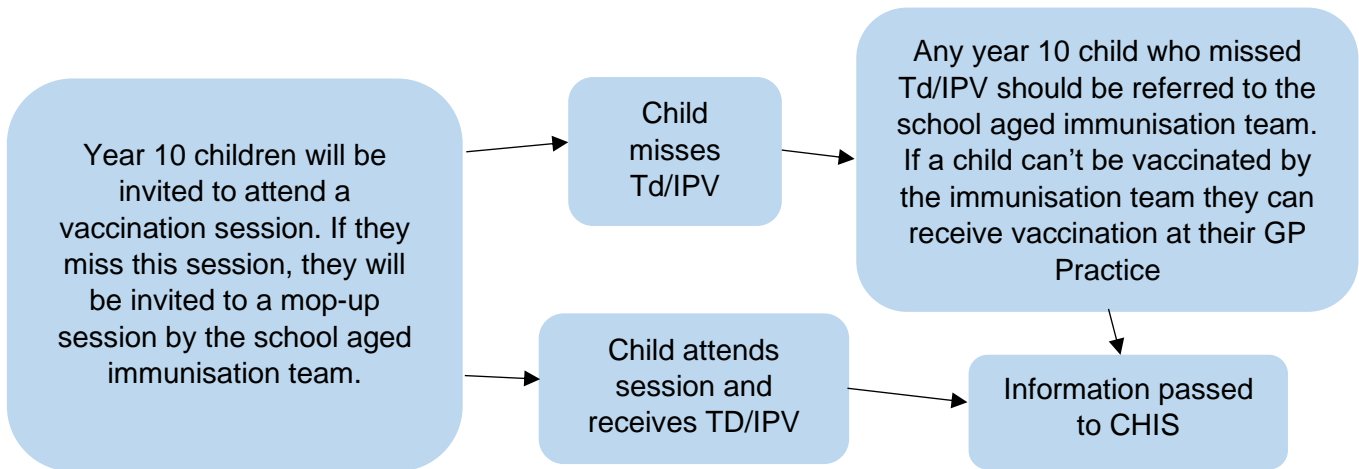

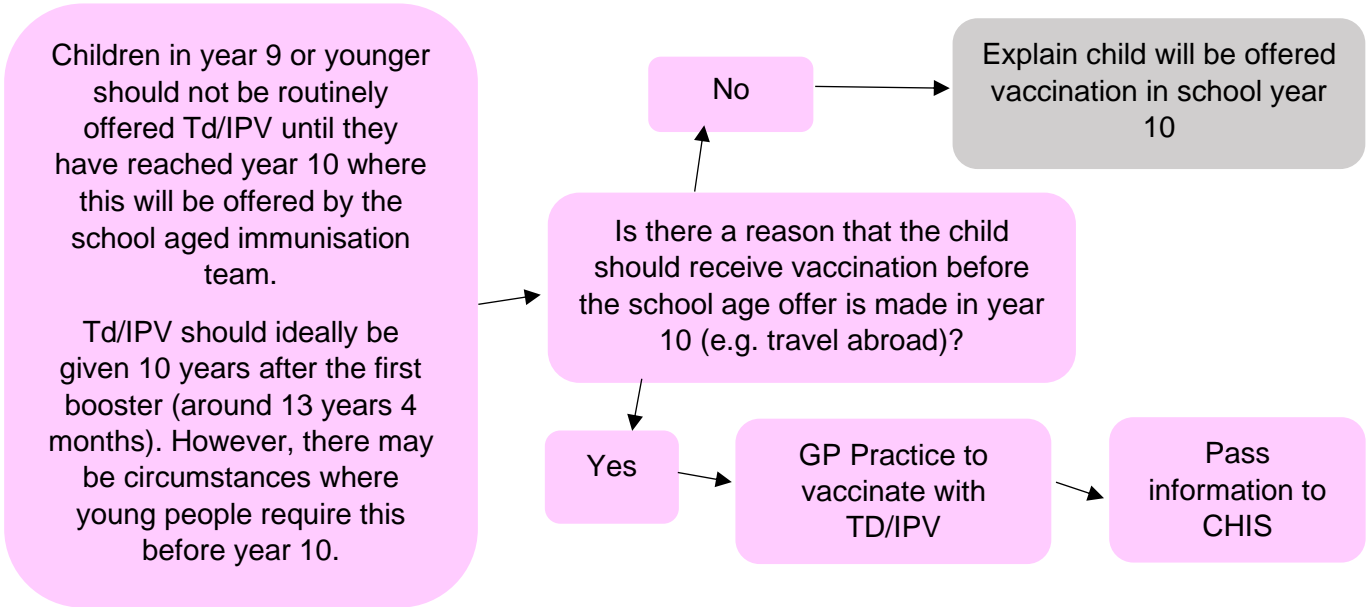

Older groups eligible through opportunistic vaccination

Men ACWY vaccination should be offered by GP practices to eligible young adults aged 17 or older on an opportunistic basis or who self-present at the GP practice; unless immunisation is contraindicated.

Eligible patients must be under the age of 25 years at the time of vaccination and include:

1. those attending university/further education for the first time at the time of vaccination;
2. those aged 19 years on 31 August 2021;
3. those eligible from August 2015 remain eligible up to the day before their 25th birthday;
4. those vaccinated at any time during the period 1 April 2021 to 31 March 2022.

Vaccination Process for Td/IPV (Teenage Booster)

Any older children, young people or adults who have missed any dose of Td/IPV should be vaccinated opportunistically in general practice.

Please refer to the [Green Book](#) and the [incomplete vaccination schedule](#) for further information.

Date of births and year groups for 2021/22 academic year

School Year	Date of birth	Age
Reception	01.09.16 – 31.08.17	4 to 5
Year 1	01.09.15 – 31.08.16	5 to 6
Year 2	01.09.14 – 31.08.15	6 to 7
Year 3	01.09.13 - 31.08.14	7 to 8
Year 4	01.09.12 - 31.08.13	8 to 9
Year 5	01.09.11 - 31.08.12	9 to 10
Year 6	01.09.10 – 31.08.11	10 to 11
Year 7	01.09.09 – 31.08.10	11 to 12
Year 8	01.09.08 – 31.08.09	12 to 13
Year 9	01.09.07 – 31.08.08	13 to 14
Year 10	01.09.06 - 31.08.07	14 to 15
Year 11	01.09.05 – 31.08.06	15 to 16
Year 12	01.09.04 - 31.08.05	16 to 17
Year 13	01.09.03 - 31.08.04	17 to 18
