

The statistics on Venous Thromboembolism (VTE) Risk Assessment in England for July 2014, produced by NHS England, were released on 3<sup>rd</sup> October 2014 according to the arrangements approved by the UK Statistics Authority.

## **Venous Thromboembolism (VTE) Risk Assessment data collection July 2014**

### **Key Points**

The key results for data collected on the number and proportion of VTE Risk Assessments carried out on adult admissions to NHS funded acute care are as follows:

- Of the 1.2 million adult patients admitted to NHS funded acute care in July 2014, as reported in this data collection, 96% of these received a VTE risk assessment on admission, the same as June 2014.
- In July 2014, the proportion of admissions receiving a VTE risk assessment was slightly lower for NHS acute care providers (96%) than for Independent Sector providers (99%), with NHS acute care providers carrying out around 97% of all VTE risk assessments.
- All the NHS regions (London, North of England, South of England, Midlands and East of England) achieved the 95% goal in this month: 98% for the North, Midlands and East of England and South regions and 97% for the London region.
- In July 2014 there were 28 trusts (9% of all trusts) that were below the 95% threshold, with most of them (24 out of 28) between 90-95%, that is, getting closer to the NHS Standard Contract threshold. This is an improvement from 26 out of 33 trusts in June 2014.
