

Monthly performance statistics, November 2016

Performance statistics for November 2016 were released at 9.30am on Thursday 12 January 2017 covering the following:

- the NHS 111 service;
- ambulance quality indicators;
- A&E attendances and emergency admissions;
- waiting times for diagnostic tests, referral to treatment for consultant-led elective care, cancer services;
- delayed transfers of care; and
- Early Intervention in Psychosis.

This document provides an overview of those results. More detail can be found within each individual release.

The long-term trend is one of greater volumes of both urgent and emergency care and elective activity, with A&E attendances up 4.5%, emergency admissions up 3.5%, diagnostic tests up 4.8% and consultant-led treatment up 4.4%.

In the case of urgent and emergency care in November 2016, the NHS constitution standards were not met for A&E waiting times.

In the case of elective care, the standards were met for seven of the eight cancer standards, but not for referral to consultant-led treatment within 18 weeks, diagnostic tests, or 62-day wait from urgent GP referral to treatment for cancer.

Urgent and Emergency Care

NHS 111

- In November 2016, there were 1,170,452 calls offered to the NHS 111 service in England, a 1% increase on the 1,160,300 in November 2015.
- The proportion abandoned after waiting longer than 30 seconds was 2.5%, similar to 2.4% in October 2016.
- Of calls answered by NHS 111, 88.2% were answered within 60 seconds, similar to 88.5% reported in the previous month.
- Of calls answered, 14% were offered a call back.
- Of call backs offered, 38% were within 10 minutes, the same as October 2016.
- Of calls answered, 21.6% were transferred to a clinical advisor, similar to 21.4% in October 2016.

- Of calls triaged, 14% had ambulances dispatched, 9% were recommended to A&E, 59% were recommended to primary care, 4% were recommended to another service and 14% were not recommended to attend any other service. Since February 2014 (when data were first available for NHS 111 across all of England), this is the highest proportion of ambulance dispatches.

Ambulance response times

In England, since June 2016, only eight of the eleven Ambulance Services, covering 70% of the population, still use the Red 1 and Red 2 classification. In those eight Trusts in November 2016:

- 67.8% of Red 1 calls had an emergency response within 8 minutes. The standard of 75% was last met in May 2015.
- 63.4% of Red 2 calls had an emergency response within 8 minutes. The standard of 75% was last met in January 2014.
- 90.3% of Category A calls had an ambulance response within 19 minutes. The standard of 95% was also last met in May 2015.

A&E attendances

- There were 1,906,784 attendances at A&E in November 2016, 1.7% more than in November 2015. Attendances over the latest twelve months are higher than levels in the preceding twelve month period (an increase of 4.5%).
- 88.4% of patients were admitted, transferred or discharged from A&E within four hours of arrival, below the 95% standard.
- The standard of 95% of patients spending 4 hours or less in A&E was last achieved in July 2015

Emergency admissions

- There were 489,333 emergency admissions in November 2016, 2.9% more than in November 2015. Emergency admissions over the last twelve months are up 3.5% on the preceding twelve month period.

Elective Care

Diagnostic tests

- A total of 1,846,729 diagnostic tests were undertaken in November 2016, an increase of 1.9% from November 2015 (adjusted for working days). The number of tests conducted over the last twelve months is up 4.8% (adjusted for working days) on the preceding twelve month period.

- 1.1% of the patients waiting at the end of the month had been waiting six weeks or longer from referral for one of the 15 key diagnostic tests, higher than the standard of 1%. The 1% operational standard was last met in November 2013.

Referral to treatment for consultant-led elective care

- 1,435,055 patients started consultant-led treatment in November 2016. The figure for the latest twelve months is up 4.4% on the preceding twelve month period (including estimates for trusts not submitting information and taking account of working days).
- 90.5% of patients on the waiting list at the end of November 2016 had been waiting less than 18 weeks, thus not meeting the 92% standard.
- 1,236 patients were waiting more than 52 weeks at the end of November 2016.

Cancer services

- Seven of the eight cancer standards were met.
- The 85% standard for 62 day cancer waiting times was not met, with 82.3% of patients beginning a first definitive treatment within 62 days from an urgent GP referral for suspected cancer.

Delayed transfers of care

- There were 193,680 delayed days in November 2016, compared to 153,155 in November 2015.
- There were 6,825 patients delayed at midnight on the last Thursday of November 2016. This is the highest number since monthly data were first collected in August 2010.

Mental Health

- The EIP access and waiting time standard requires that, from 1 April 2016, more than 50% of people experiencing First Episode Psychosis (FEP) are treated with a NICE-recommended package of care within two weeks of referral. The data summarised here relates to the waiting time element of the standard.
- 77.6% of patients started treatment within two weeks in November 2016 (935 out of 1,205 patients started treatment within two weeks)
- The number of patients waiting to start treatment (incomplete pathways) was 1,214 at the end of November 2016. Of these 612 were waiting for more than two weeks.
- Providers are continuing to work on data quality, and issues identified by them may ultimately impact on performance against the standard – single month's data should therefore be treated with caution.

- This collection of data via Unify2 is an interim measure and is intended to continue until data collected by NHS Digital via the Mental Health Services Dataset is considered to be robust.
