

Venous Thromboembolism
(VTE) Risk Assessment data
collection

Quarter 3 2015/16

4 March 2016

**Venous Thromboembolism (VTE) Risk Assessment data collection
Quarter 3 2015/16 (October to December 2016)**

Published 4 March 2016

1. Background

Venous Thromboembolism (VTE), commonly known as blood clots, is a significant international patient safety issue. The first step in preventing death and disability from VTE is to identify those at risk so that preventative treatments can be used. The purpose of this data collection is to quantify the numbers of adult hospital admissions who are being risk assessed for VTE to allow appropriate prophylaxis based on national guidance from NICE¹. Such measures have the potential to save many lives each year.

This data collection is intended to embed VTE risk assessment across the NHS and will be critical in evaluating the impact of the National VTE Prevention Programme on improving health outcomes for patients. The VTE risk assessment is a previous national CQUIN indicator and is a National Quality Requirement in the NHS Standard Contract for 2015/16². It sets a threshold rate of 95% of inpatients should undergo a risk assessment each month.

The data collection asks for three items of information:

1. Number of adults admitted as inpatients in the month who have been risk assessed for VTE on admission to hospital using the criteria in the National VTE Risk Assessment Tool
2. Total number of adult inpatients admitted in the month
3. Calculated from (1) and (2), the percentage of adult inpatients, admitted within the month assessed for risk of VTE on admission

All providers of NHS funded acute care (including foundation and non-foundation trusts and Independent sector providers of acute NHS services) must complete this data collection. Providers of non-acute health services are not asked to complete this data collection, although they should be aware that all patients should be protected from unnecessary risk of VTE. This data collection is a census of all patients – it is not appropriate to use sampling methodologies to produce estimates.

¹ The NICE guidance can be found at the following link: <http://guidance.nice.org.uk/CG92>

² <https://www.england.nhs.uk/wp-content/uploads/2015/08/nhs-contract-partics-v1.pdf>

2. Key findings -

- 95% of all admissions to NHS funded acute care received a VTE risk assessment in Quarter 3 2015/16.
- The percentage of VTE risk assessment was slightly lower for NHS acute care providers (95%) compared to Independent sector providers (99%) in Quarter 3 2015/16.
- For the first time since Quarter 2 2013/14 the percentage of patients risk assessed for VTE has decreased from 96% to 95% in Quarter 3 2015/16.
- All the NHS regions (London, North of England, South of England, and Midlands and East of England) achieved the 95% goal in Quarter 3 2015/16.

3. Findings

Proportion of total admissions receiving a risk assessment

- In Quarter 3 2015/16 all providers of NHS funded acute care, including NHS trusts and Independent sector providers, reported over 3.7 million admissions. Of these, 3.5 million (95%) received a VTE risk assessment on admission, this is a 1 percentage point decrease compared to Quarter 2 2015/16 (see Table 1).
- In Quarter 3 2015/16, the proportion of admissions receiving a VTE risk assessment was slightly lower for NHS acute care providers (95%) compared to Independent sector providers (99%), with NHS acute care providers carrying out 97% of all VTE risk assessments and Independent sector providers carrying out 3%.

Table 1. Proportion of adult hospital admissions risk assessed for VTE (Quarter 3 2015/16, England)

	October 2015	November 2015	December 2015	Q3 2015/16
NHS acute care providers	95.5%	95.6%	95.0%	95.4%
Independent sector Providers	98.9%	99.0%	99.0%	99.0%
All providers of NHS funded acute care	95.6%	95.7%	95.1%	95.5%

- The data collection was first made mandatory on June 2010 with its first publication covering Quarter 2 2010/11 (July-September 2010). A chart showing the proportion of adult admissions risk assessed for VTE since Quarter 2 2010/11 is shown below (see Figure 1).
- There has been a steady increase in the proportion of risk assessments for adult admissions across NHS funded acute care, from 53% in Quarter 2 2010/11 to 96% in Quarter 2 2013/14. This proportion has remained stable from Quarter 2 2013/14 to Quarter 2 2015/16, but has recently undergone a 1 percentage point decrease in Quarter 3 2015/16, to 95%.
- Overall, all NHS England Regions achieved the 95% goal in this quarter (see Table 2).

Figure 1: Proportion of adult hospital admissions risk assessed for VTE, (Quarter 2 2010/11 to Quarter 3 2015/16, England)

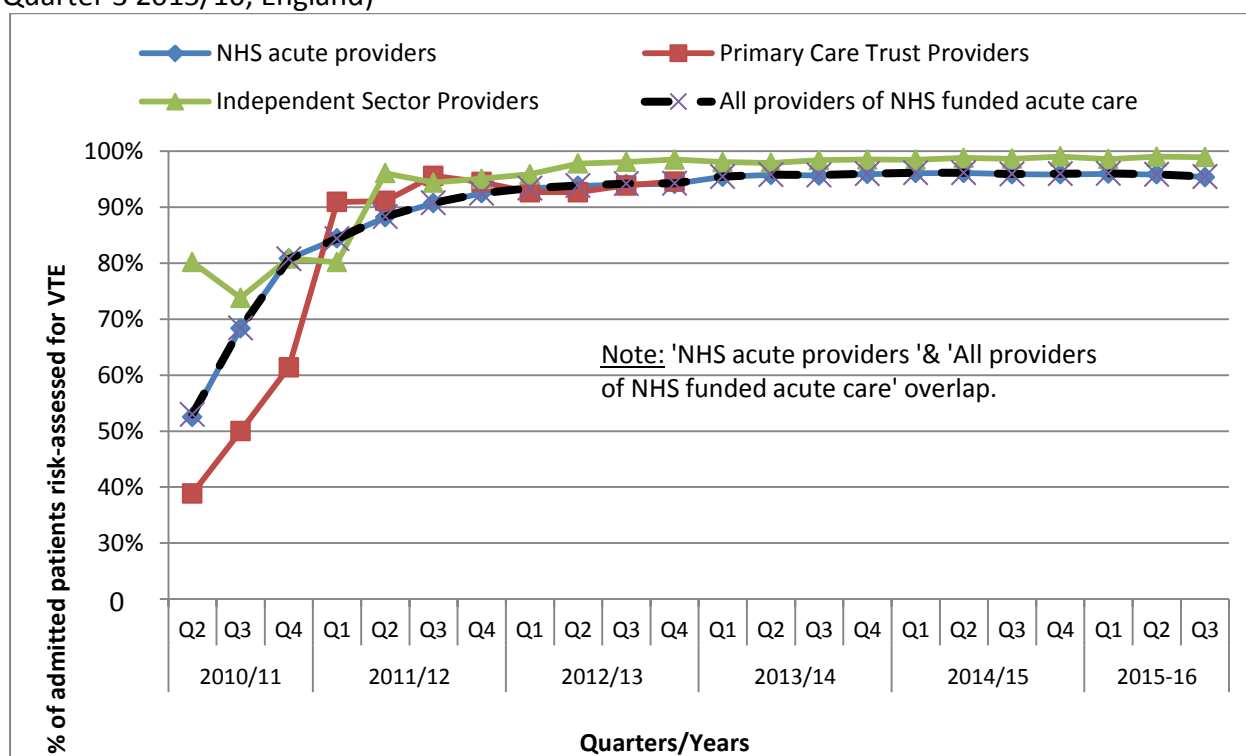

Table 2: Proportion of adult hospital admissions risk assessed for VTE by NHS England Region (Quarter 3 2015/16, England)

NHS Region	All providers	NHS acute care providers	Independent sector providers
North of England	95.2%	95.1%	98.8%
Midlands and East of England	95.8%	95.7%	98.6%
London	95.6%	95.6%	98.9%
South of England	95.3%	95.2%	99.4%

Proportion of providers above and below 95% of admissions receiving a VTE risk assessment

- In Quarter 3 2015/16, 89% of providers (280 providers out 313) carried out a VTE risk assessment for 95% or more of their admissions (the NHS Standard Contract threshold). This is a decrease compared to Quarter 2 2015/16, where 93% (289 of 312) of providers carried out a VTE risk assessment for 95% or more of admissions (see Table 3).
- These percentages are lower for NHS acute care providers compared to Independent sector providers, with NHS acute care providers carrying out around 97% of all VTE risk assessments.
- Of those providers not achieving the 95% threshold, how many are close to achieving the NHS Standard Contract goal? To answer this, the number of providers carrying out a VTE risk assessment from 90% to below 94% of their admissions is assessed. Table 3 below shows

that in Quarter 3 2015/16 there are 33 providers (10% of all 313 trust who submitted data) that were below the 95% threshold, however the majority of these providers (27 out of 33) achieved risk assessments for 90-94% of total admissions for VTE.

Table 3: Providers reporting rates above and below 95% of admissions receiving a VTE risk assessment (Quarter 3 2015/16, England)

	All providers		NHS acute care providers		Independent sector providers	
	Number	%	Number	%	Number	%
90%-94%	27	8.6%	26	16.5%	1	0.6%
Below 95%	33	10.5%	32	20.3%	1	0.6%
95% and above	280	89.5%	126	79.7%	154	99.4%

Number of data returns

- The total number of data returns submitted by all providers of NHS funded acute care over Quarter 3 2015/16 was 313 in each of October, November and December, respectively.
- The number of NHS acute care providers submitting a data return in each month over Quarter 3 2015/16 was 158 in October, November and December.
- For Independent sector providers, it was 155 in each of in October, November and December

4. Further information on how the statistics are produced

Nil returns

Providers are required to provide information based on a census of patients. Providers who submit data based on a sample or audit of patients are not included in the figures below, and are classed as a “nil return”. Providers who did not have any admissions in a particular month in the quarter are also classed as a ‘nil return’ in that month.

Timings and publication

Providers must collect and submit data onto UNIFY 2 by 20 working days after the quarter end. The full data tables can be found: <http://www.england.nhs.uk/statistics/vte/>

Data are submitted and published according to the timings below:

Timing	Process
Month A (e.g. June)	Data are collected from patients in each trust for the quarter.
Month B (e.g. July)	Trusts submit their data quarterly for the previous quarter (e.g. Quarter 1 data is submitted towards the end of July).
Month C (e.g. August)	Data are quality assured during Month C.
Month D (e.g. September)	Data for the quarter are published in the NHS England website and in UNIFY 2.0 in the beginning of month D (e.g. quarter 1 are published in

early September).

Guidance

Guidance on the data collection is included in the 2015/16 NHS Standard Contract and can be found at: <http://www.england.nhs.uk/statistics/wp-content/uploads/sites/2/2015/04/NHS-Standard-Contract-2015-16-Technical-Guidance.pdf>

Information on the 2015/16 NHS Standard Contract can be found at:
<http://www.england.nhs.uk/nhs-standard-contract/15-16/>

Quality assurance

Data quality assurance focusses on identifying missing data, data errors (e.g. the numerator should not be greater than the denominator) and data consistency over time. Any issues identified are discussed with providers who have the opportunity to clarify or resubmit their data within the quality assurance period.

Data Quality Issues

As from Quarter 3 2015/16 for the purposes of transparency we will report on any data quality issues reported to us from trusts.

Warrington and Halton Hospitals NHS Foundation Trust

Warrington and Halton Hospitals NHS Foundation Trust's Quarter 3 2015/16 data contains some data quality issues due to a local IT system change.

5. Additional Information

Data for individual organisations are available at: <http://www.england.nhs.uk/statistics/vte/>
