

STATISTICAL PRESS NOTICE

MONTHLY DELAYED TRANSFERS OF CARE DATA, ENGLAND, APRIL 2016

Main Findings – April 2016:

Delayed Transfers of Care

- There were 167,700 total delayed days in April 2016, of which 112,700 were in acute care. This is an increase from April 2015, where there were 138,000 total delayed days, of which 88,700 were in acute care.
- 60.2% of all delays in April 2016 were attributable to the NHS, 32.9% were attributable to Social Care and the remaining 7.0% were attributable to both NHS and Social Care.
- The proportion of delays attributable to Social Care has increased over the last year to 32.9% in April 2016, compared to 29.1% in April 2015.
- The main reason for NHS delays in April 2016 was “patients awaiting further non-acute NHS care”. This accounted for 30,300 delayed days (30.0% of all NHS delays). The number of delays attributable to this reason has shown a general increase from May 2015 with a small decrease in November 2015.
- The main reason for Social Care delays in April 2016 was “patients awaiting care package in their own home”. This accounted for 19,500 delayed days (35.3% of all Social Care delays), compared to 13,100 in April 2015.
- Delays can occur in either an acute or non-acute care setting. The proportion of delays occurring in acute care in April 2016 was 67.2% compared to 64.3% in April 2015.
- There were 5,900 patients delayed at midnight on the last Thursday of April 2016, of which 3,900 were acute patients. This compares to 4,700 patients, including 3,000 acute patients that were delayed at midnight on the last Thursday of April 2015. The 5,900 patients delayed this month is the highest number since monthly data was first collected in August 2010.

Table 1 shows information on delayed transfers of care from April 2013 to April 2016.

Table 2 shows the number of delayed transfers of care by type of care, reason for delay and responsible organisation for April 2016.

Details of delayed transfers of care data for individual organisations are available at:

Notes:

1. A change from weekly to monthly data in Aug-10 led to data quality issues with the first few months of delayed transfers of care data in the monthly collection.
2. Information on the numbers of people delayed on the last Thursday of the reporting period and the total number of Delayed Days are not directly comparable because the first is a 'snapshot' and the second a cumulative total.

Notes:

1. NA means the combination of reason and responsible organisation is not permitted.
2. Information on the numbers of people delayed on the last Thursday of the reporting period and the total number of Delayed Days are not directly comparable because the first is a 'snapshot' and the second a cumulative total.

Statistical Notes to Editors

1. Delayed Transfers of Care data

A delayed transfer of care occurs when a patient is medically fit for discharge from acute or non-acute care and is still occupying a bed. For a more detailed definition please read the guidance on NHS England's website at:
<http://www.england.nhs.uk/statistics/delayed-transfers-of-care/>

Data on the number of patients with a delayed transfers of care is a monthly snapshot taken at midnight on the last Thursday of each month and can fluctuate from month to month. Data on the number of delayed days is a cumulative figure for the month and therefore, the two are not comparable.

Data on delayed transfers of care is collected from providers of NHS funded care and is split by:

- Local Authority that is responsible for each patient delayed
- Agency responsible for delay (NHS, Social Services or both)
- Type of care that the patient receives (acute or non-acute)
- Reason for delay

A detailed breakdown of the data can be found on NHS England's website in CSV format at:

<http://www.england.nhs.uk/statistics/delayed-transfers-of-care/delayed-transfers-of-care-data-2016-17/>

2. Trust and Local Authority level data

Delayed transfers of care data covers NHS patients in English Hospitals, who may or may not reside in England and is published on both a trust and Local Authority basis.

Trust level reflects data at organisation level for those organisations that provide NHS funded care, for example acute Trusts, community providers, mental health trusts and Social Enterprise organisations.

Local Authority data reflects data on a regional population basis, i.e. Councils with Adult Social Services Responsibility (CASSRs) that are responsible for all patients who reside in their region.

3. Data Quality

Monthly delayed transfers of care data has been collected and published since August 2010. Prior to August 2010, data was collected weekly and was un-validated management information.

Delayed transfers of care data published during the early months of the collection from August 2010 to October 2010 should be treated with a degree of caution as a change from a weekly to a monthly data collection led to data quality issues. Since October 2010, there has been a significant improvement in the coverage and accuracy of this data.

4. Data Availability

Delayed Transfers of Care data is published approximately 6 weeks after the end of the reference period. The next publication of this report and accompanying data will be 14th July 2016.

5. Revisions

Revisions to previous month's data are made in line with NHS England's revisions protocol for performance monitoring data. Future revisions will be made on a six monthly cycle. The revisions protocol can be found on the NHS England website at: <http://www.england.nhs.uk/statistics/code-compliance/>
