

STATISTICAL PRESS NOTICE MONTHLY DELAYED TRANSFERS OF CARE DATA, ENGLAND, MAY 2017

Main Findings – May 2017:

Delayed Transfers of Care

- There were 178,400 total delayed days in May 2017, of which 115,600 were in acute care. This is an increase from May 2016, where there were 172,300 total delayed days, of which 115,500 were in acute care.
- The 178,400 total delayed days in May 2017 is equivalent to 5,755 daily DTOC beds. This compares to 5,905 in April 2017 and 5,558 in May 2016.
- 55.5% of all delays in May 2017 were attributable to the NHS, 37.1% were attributable to Social Care and the remaining 7.4% were attributable to both NHS and Social Care.
- The proportion of delays attributable to Social Care has increased over the last year to 37.1% in May 2017, compared to 32.8% in May 2016.
- The main reason for NHS delays in May 2017 was “patients awaiting further non-acute NHS care”. This accounted for 29,800 delayed days (30.2% of all NHS delays). The number of delays attributable to this reason showed a general increase between July 2015 and April 2016, before levelling off for several months. The number of delays attributable to this reason has increased slightly in May after a sharp decrease in April.
- The main reason for Social Care delays in May 2017 was “patients awaiting care package in their own home”. This accounted for 22,300 delayed days (33.9% of all Social Care delays), compared to 20,400 in May 2016. The number of delays attributable to this reason had been increasing steadily since February 2015 and reached a peak in December 2016. Since March 2017, the number of delays attributable to this reason has been decreasing.
- Delays can occur in either an acute or non-acute care setting. The proportion of delays occurring in acute care in May 2017 was 64.8% compared to 67.0% in May 2016.

Table 1 shows information on delayed transfers of care from May 2014 to May 2017.

Table 2 shows the number of delayed transfers of care by type of care, reason for delay and responsible organisation for May 2017.

Details of delayed transfers of care data for individual organisations are available at:

Notes:

1. NA means the combination of reason and responsible organisation is not permitted.
2. As of April 2017, a new 'Other' category has been added for non-acute delays. This category is used for delays reported in NHS Digital's Mental Health Services Data Set (MHSDS v2.0) which cannot be mapped to existing codes within the NHS England Delayed Transfers of Care collection.

Statistical Notes to Editors

1. Delayed Transfers of Care data

A delayed transfer of care occurs when a patient is medically fit for discharge from acute or non-acute care and is still occupying a bed. For a more detailed definition please read the guidance on NHS England's website at:
<http://www.england.nhs.uk/statistics/delayed-transfers-of-care/>

The daily DTOC beds measure is calculated by dividing the total number of delayed days in the month by the number of calendar days.

As of April 2017, the count of patients delayed on the last Thursday of the month is no longer being collected. Historical data for this measure will remain available on the NHS England Statistics website.

Data on delayed transfers of care is collected from providers of NHS funded care and is split by:

- Local Authority that is responsible for each patient delayed
- Agency responsible for delay (NHS, Social Services or both)
- Type of care that the patient receives (acute or non-acute)
- Reason for delay

A detailed breakdown of the data can be found on NHS England's website in CSV format at:

<http://www.england.nhs.uk/statistics/delayed-transfers-of-care/delayed-transfers-of-care-data-2016-17/>

2. Trust and Local Authority level data

Delayed transfers of care data covers NHS patients in English Hospitals, who may or may not reside in England and is published on both a trust and Local Authority basis.

Trust level reflects data at organisation level for those organisations that provide NHS funded care, for example acute Trusts, community providers, mental health trusts and Social Enterprise organisations.

Local Authority data reflects data on a regional population basis, i.e. Councils with Adult Social Services Responsibility (CASSRs) that are responsible for all patients who reside in their region.

3. Data Quality

Monthly delayed transfers of care data has been collected and published since August 2010. Prior to August 2010, data was collected weekly and was un-validated management information.

Delayed transfers of care data published during the early months of the collection from August 2010 to October 2010 should be treated with a degree of caution as a change from a weekly to a monthly data collection led to data quality issues. Since October 2010, there has been a significant improvement in the coverage and accuracy of this data.

4. Data Availability

Delayed Transfers of Care data is published approximately 6 weeks after the end of the reference period. The next publication of this report and accompanying data will be 10th August, 2017.

5. Revisions

Revisions to previous month's data are made in line with NHS England's revisions protocol for performance monitoring data. Future revisions will be made on a six monthly cycle. The revisions protocol can be found on the NHS England website at: <http://www.england.nhs.uk/statistics/code-compliance/>
