

## **Dementia Assessment and Referral data collection – Q1 2017-18**

The **June 2017 and Quarter 1 2017-18 data** for the Dementia Assessment and Referral data collection in England by NHS England were released on **6<sup>th</sup> September 2017** according to the arrangements approved by the UK Statistics Authority.

The collection's purpose is to improve the identification of older patients with dementia and delirium, to monitor appropriate assessment and to prompt appropriate referral and follow up after they leave hospital. Three measures are reported – the number and proportion of patients aged 75 and over admitted as an emergency for more than 72 hours:

- i) who have a diagnosis of dementia or delirium or to whom case finding is applied; [Find]
- ii) who, if identified as potentially having dementia or delirium, are appropriately assessed; [Assess/Investigate], and,
- iii) where the outcome was positive or inconclusive, are referred on to specialist services. [Refer]

The Dementia Assessment and Referral collection was retired as a CQUIN collection at the start of April 2016 but has been retained in the standard contract as a mandatory submission for acute trusts. The desired level of performance is at least 90% on each part of the indicator. Data are not collected from community trusts or CCGs. The acute trusts have maintained a good response rate similar to previous months.

### **Monthly Publication –June 2017**

The total number of data returns submitted by NHS Foundation and Non-Foundation Trusts providing acute funded care was 143 in June 2017, compared to 143 in May 2017. There were 3 nil returns, compared to 2 in May. Nil returns are excluded from the results presented below.

#### **Data by Total Patients**

- i) Overall, 88.0% of patients aged 75 and over admitted as an emergency for more than 72 hours were initially identified or given case finding for potential dementia in June 2017, compared to 88.3% in May.
- ii) Of the patients initially identified or found as potentially having dementia, 94.5% were further appropriately assessed in June 2017, compared with 94.4% in May.
- iii) Of the patients whose outcome was positive or inconclusive, 93.2% were referred for specialist services in June 2017, compared with 93.9% in May.

### **Data by Acute Trusts**

- i) 71.4% (100 trusts) achieved at least 90% in June 2017 in carrying out initial identification (using case finding) for potential cases of dementia amongst patients aged 75 and over who were admitted as an emergency for more than 72 hours, compared to 74.5% (105 trusts) in May.
- ii) 76.4% (107 trusts) achieved at least 90% in June 2017 in carrying out further appropriate assessments, compared with 77.3% (109 trusts) in May.
- iii) 75.0% (105 trusts) achieved at least 90% in June 2017 in referring on to specialist services, compared with 71.6% (101 trusts) in May.

76 acute trusts (54.3%) achieved at least 90% in all three measures in June 2017.

### **Quarterly Publication – Quarter 1 2017/18 (April, May, June combined)**

The total number of NHS Foundation and Non-Foundation Trusts providing acute funded care who submitted data returns, in at least one of the months, was 144 in Quarter 1 2017/18, compared to 147 in Quarter 4 2016/17. Two trusts submitted only nil returns, compared to 2 in Quarter 4 2016/17. Nil returns are excluded from the results presented below.

### **Data by Total Patients**

- iv) Overall, 88.5% of patients aged 75 and over admitted as an emergency for more than 72 hours were initially identified or given case finding for potential dementia in Quarter 1 2017/18, compared to 89.0% in Quarter 4 2016/17.
- v) Of the patients initially identified or found as potentially having dementia, 94.5% were further appropriately assessed in Quarter 1 2017/18, compared with 92.7% in Quarter 4 2016/17.
- vi) Of the patients whose outcome was positive or inconclusive, 94.0% were referred for specialist services in Quarter 1 2017/18, compared with 94.6% in Quarter 4 2016/17.

### **Data by Acute Trusts**

- iv) 73.2% (104 trusts) achieved at least 90% in Quarter 1 2017/18 in carrying out initial identification (using case finding) for potential cases of dementia amongst patients aged 75 and over who were admitted as an emergency for more than 72 hours, compared to 74.3% (107 trusts) in Quarter 4 2016/17.
- v) 78.2% (111 trusts) achieved at least 90% in Quarter 1 2017/18 in carrying out further appropriate assessments, compared with 77.8% (112 trusts) in Quarter 4 2016/17.
- vi) 70.4% (100 trusts) achieved at least 90% in Quarter 1 2017/18 in referring on to specialist services, compared with 72.9% (105 trusts) in Quarter 4 2016/17.

74 acute trusts (52.1%) achieved at least 90% in all three measures in Quarter 1 2017/18.
