

# COVID-19 Vaccination Statistics

Week ending Sunday 7<sup>th</sup> March 2021

## Overall Vaccination Activity

- In the week ending the 7<sup>th</sup> March an additional 1,783,136 people were reported to have received an NHS vaccination for COVID-19 in England. This took the total number of people vaccinated with at least one dose as of the 7<sup>th</sup> March to 18,962,627.
- Of those vaccinated, 796,574 people have received a 2<sup>nd</sup> dose, taking the total number of vaccinations given to 19,759,201.
- As at 5<sup>th</sup> March, 267 hospital hubs, 1,034 local vaccination sites, 224 community pharmacies and 124 vaccination centres have provided the vaccine.

## Data:

- All data presented in this report has been collected through the National Immunisation Management Service (NIMS) unless otherwise specified. This data system draws on various local point of care immunisation data systems in near real time, such as those used in hospitals and GP practices. It is the System of Record for the COVID-19 vaccination programme. NIMS data used in this release has been developed with Public Health England.
- Figures used in this report are as held in the NIMS database as of the 9<sup>th</sup> March 2021. Note that figures may be updated in future weeks as further information flows from local point of care systems.
- Vaccinations by geographic area are provided by area of residence. This includes by NHS Region, ICS/STP, CCG, MSOA, Lower Tier Local Authority and Parliamentary Constituency.
- Where population estimates are provided, they are based on mid-year 2019 Office for National Statistics (ONS) estimates, or populations drawn directly from the NIMS system. The ONS estimates are the most recent and best available total population estimates and are used to approximate vaccine uptake by national, regional, Integrated Care System (ICS) / Sustainability Transformation Partnership (STP) and Clinical Commissioning Group (CCG) geographies. Where necessary these

populations have been mapped from small area (Lower Super Output Area) to geographies by age band to estimate resident populations.

- For smaller geographies (Middle Layer Super Output Area, Lower Tier Local Authority and constituency), ONS population estimates are less robust. Therefore, NIMS denominators are also provided at these more granular levels. They should be used when calculating vaccine coverage for public health purposes. NIMS denominators may provide an overcount if individuals are no longer resident in England, but may also be subject to some undercounting as they currently do not include individuals without an NHS number. Coverage can be viewed as being 'at least' the figures presented using the NIMS denominator.
- Data on vaccinations of residents of older adult care homes and social care workers, and of care homes visited have been provided by the Department of Health and Social Care, and as held in the Capacity Tracker on the 7<sup>th</sup> March 11:59pm.
