

# Venous thromboembolism risk assessment data collection

## Quarter 2 2019/20 (July to September 2019)

4 December 2019

The NHS Long Term Plan says that when organisations work together they provide better care for the public. That is why on 1 April 2019 NHS Improvement and NHS England united as one – our aim, to provide leadership and support to the wider NHS. Nationally, regionally and locally, we champion frontline staff who provide a world-class service and constantly work to improve the care given to the people of England.

# 1. Background

Venous thromboembolism (VTE), commonly known as blood clots, is a significant international patient safety issue. The first step in preventing death and disability from VTE is to identify those at risk so that preventative treatments (prophylaxis) can be given. This data collection quantifies the numbers of hospital admissions (aged 16 and over at the time of admission) who are being risk assessed for VTE to identify those who should be given appropriate prophylaxis based on guidance from the National Institute for Health and Care Excellence (NICE).<sup>1</sup> Such measures have the potential to save many lives each year.

This data collection is intended to embed VTE risk assessment across the NHS and will be critical in evaluating the impact of the National VTE Prevention Programme on improving health outcomes for patients. The VTE risk assessment is a former national CQUIN indicator and is a National Quality Requirement in the NHS Standard Contract for 2019/20.<sup>2</sup> It sets an operational standard of 95% of inpatients aged 16 and over being risk assessed for VTE on admission each month. Prior to April 2019 the operational standard related to adult inpatients aged 18 and over.

The data collection asks for three items of information:

1. number of inpatient admissions (aged 16 and over at the time of admission) reported as having had a VTE risk assessment on admission to hospital using the clinical criteria of a national tool
2. total number of inpatients (aged 16 and over at the time of admission) admitted in the month
3. calculated from 1 and 2, the percentage of inpatients (aged 16 and over at the time of admission) admitted in the month who have been risk assessed for VTE on admission.

All providers of NHS-funded acute care (that is, NHS trusts and foundation trusts and independent sector providers of acute NHS services) must complete this data collection. Providers of non-acute health services are not asked to complete this data collection, although they should be aware that all patients should be protected from unnecessary risk of VTE.

<sup>1</sup> <http://pathways.nice.org.uk/pathways/venous-thromboembolism>

<sup>2</sup> [www.england.nhs.uk/publication/nhs-standard-contract-2019-20-technical-guidance/](http://www.england.nhs.uk/publication/nhs-standard-contract-2019-20-technical-guidance/)

This data collection is a census of all patients – it is not appropriate to use sampling methodologies to produce estimates.

## 2. Key findings for quarter 2 2019/20

- 95% of inpatients (aged 16 and over at the time of admission) admitted to NHS-funded acute care received a VTE risk assessment in quarter 2 (Q2) 2019/20.
- The percentage of inpatients risk assessed for VTE remained at 96% from Q3 2015/16 to Q4 2016/17. It decreased to 95% between Q1 2017/18 and Q4 2017/18. In Q1 2018/19 performance increased to 96% but decreased in Q2 2018/19 to 95%. In Q3 2018/19 performance increased to 96% and remained at 96% in Q4 2018/19 and Q1 2019/20. Performance decreased to 95% in Q2 2019/20.
- The percentage assessed for VTE risk was 95% for NHS acute care providers and 98% for independent sector providers.
- Six regions (North East and Yorkshire, North West, Midlands, East of England, London and South East) achieved the 95% NHS Standard Contract operational standard in Q2 2019/20 (see Table 2). The South West did not meet the operational standard and risk assessed 93.7% of inpatients.

## 3. Findings

### Percentage of total admissions risk assessed for VTE

---

- In Q2 2019/20 all providers of NHS-funded acute care (NHS trusts, foundation trusts and independent sector providers) reported just under 4.0 million admissions. Of these, just over 3.8 million (95%) received a VTE risk assessment on admission (see Table 1).
- In Q2 2019/20, the percentage of inpatient admissions (aged 16 and over at the time of admission) receiving a VTE risk assessment was 95% for NHS acute care providers and 98% for independent sector providers. NHS acute

care providers carry out 97% of all VTE risk assessments and independent sector providers carry out 3%.

- The five NHS acute providers with the lowest percentage of inpatients being risk assessed were Blackpool Teaching Hospitals NHS Foundation Trust, Northern Devon Healthcare NHS Trust, University Hospitals Bristol NHS Foundation Trust, The Rotherham NHS Foundation Trust and University College London Hospitals NHS Foundation Trust.

**Table 1: Percentage of hospital admissions (aged 16 and over at the time of admission) risk assessed for VTE (Q2 2019/20, England)**

	July 2019	August 2019	September 2019	Q2 2019/20
NHS acute care providers	95.6%	95.2%	95.3%	95.4%
Independent sector providers	98.1%	97.8%	98.1%	98.0%
<b>All providers of NHS-funded acute care</b>	<b>95.7%</b>	<b>95.3%</b>	<b>95.4%</b>	<b>95.5%</b>

- From Q4 2015/16 to Q4 2016/17 the percentage of inpatients risk assessed for VTE was stable at 96%. The results for Q1 2017/18 showed a reduction of 1% with 95% of patients being risk assessed for VTE and this remained static until Q4 2017/18. In Q1 2018/19 the percentage of patients being risk assessed for VTE increased to 96% but decreased again in Q2 2018/19 to 95%. In Q3 2018/19 performance increased to 96% and remained at 96% in Q4 2018/19. From April 2019 the data collection changed to include inpatients aged 16 and over at the time of admission. In Q1 2019/20 the percentage of inpatients risk assessed was 96% and in Q2 2019/20 this decreased to 95%.
- Six regions (North East and Yorkshire, North West, Midlands, East of England, London and South East) achieved the 95% NHS Standard Contract operational standard in Q1 2019/20 (see Table 2). The South West did not meet the operational standard and risk assessed 93.7% of inpatients.

**Table 2: Percentage of hospital admissions (aged 16 and over at the time of admission) risk assessed for VTE by region (Q2 2019/20, England)**

NHS region	All providers	NHS acute care providers	Independent sector providers
North East and Yorkshire	95.4%	95.4%	97.5%
North West	95.6%	95.5%	98.9%
Midlands	96.2%	96.2%	96.3%
East of England	95.7%	95.6%	97.7%
London	95.2%	95.1%	99.1%
South East	95.9%	95.8%	98.8%
South West	93.7%	93.6%	97.7%

### **Percentage of providers above and below 95% of admissions receiving a VTE risk assessment**

- In Q2 2019/20, 81% of providers (242 of the 300 providers) carried out a VTE risk assessment for 95% or more of their admissions (the NHS Standard Contract operational standard). This breaks down as 72% of NHS acute providers (108 of 150) and 89% of independent sector providers (134 of 150).
- These percentages are lower for NHS acute care providers compared to independent sector providers, with NHS acute care providers carrying out around 97% of all VTE risk assessments.
- Of those providers not achieving 95%, how many are close to achieving the NHS Standard Contract operational standard? To answer this, the number of providers carrying out a VTE risk assessment for 90% to 95% of their admissions is assessed. Table 3 below shows that in Q2 2019/20 58 providers (19% of the 300 that submitted data) fell below the 95% operational standard; however, 62% of those providers (36 of 58) risk assessed 90% to 95% of their total admissions for VTE.

**Table 3: Providers reporting rates above 95%, between 90% and 95% and below 90% of admissions receiving a VTE risk assessment (Q2 2019/20, England)**

	All providers		NHS acute care providers		Independent sector providers	
	Number	%	Number	%	Number	%
95% and above	242	80.7	108	72.0	134	89.3
90% to 95%	36	12.0	31	20.7	5	3.3
Below 90%	22	7.3	11	7.3	11	7.3

### Number of data returns

- The total number of data returns submitted by all providers of NHS-funded acute care in each month of Q2 2019/20 (July, August and September) was 300.
- The number of NHS acute care providers submitting a data return in each month of Q2 2019/20 (July, August and September) was 150.
- For independent sector providers, it was 150 in each month of July, August and September.

## 4. Further information on how the statistics are produced

### Nil returns

Providers are required to submit information based on a census of patients. Providers that submit data based on a sample or audit of patients are not included in the figures below and are classed as a 'nil return'. Those that did not have any admissions in a particular month in the quarter are also classed as a 'nil return' in that month.

## Timings and publication

---

Providers must collect data and submit it to the Strategic Data Collection Service run by NHS Digital. The deadline is 20 working days after the quarter end. The full data tables can be found at: <https://improvement.nhs.uk/resources/vte>

Data are submitted and published according to the timings below:

Timing	Process
Month A (eg June)	Data are collected from patients in each provider for the quarter
Month B (eg July)	Providers submit their data quarterly for the previous quarter with a deadline of 20 working days after the end of that quarter (eg Q1 data is submitted towards the end of July)
Month C (eg August)	Data is quality assured
Month D (eg September)	Data for the quarter is published on the NHS Improvement website at the beginning of month D (eg Q1 data in early September)

## Guidance

---

Guidance on the data collection is given in the 2019/20 NHS Standard Contract and can be found at: [www.england.nhs.uk/publication/nhs-standard-contract-2019-20-technical-guidance/](http://www.england.nhs.uk/publication/nhs-standard-contract-2019-20-technical-guidance/)

## Quality assurance

---

Data quality assurance focuses on identifying missing data, data errors (eg the numerator should not be greater than the denominator) and data consistency over time. Any issues identified are discussed with providers and they are given the opportunity to clarify or resubmit their data within the quality assurance period.

## Data quality issues

---

As from Q3 2015/16 for the purposes of transparency we report any data quality issues reported to us by trusts.

### No submission/partial submission

Birmingham Women's and Children's NHS Foundation Trust (RQ3) did not make a submission this quarter.

## Data quality issues

Dorset County Hospital NHS Foundation Trust (RBD) reported that while VTE assessments are being carried out the IT system used for recording is not being widely used. The trust is piloting the recording of assessments on a different system that is regularly used by clinical staff for better data capture.

Gloucestershire Hospitals NHS Foundation Trust (RTE) resumed VTE risk assessment reporting in September 2017 after it implemented a new PAS. While the trust is reporting a good compliance, the numbers have changed significantly since the implementation. The trust runs data quality checks and is addressing ongoing problems through the Trak Recovery Group. New operational plans to deliver improvement are underway. Data submitted this quarter was extrapolated from an audit for July to September 2019.

Northern Devon Healthcare NHS Trust (RBZ) reported performance below the 95% operational standard. An internal trust audit provided assurance that at least 95% of patients were being risk assessed but the information was not being recorded on the PAS. Staff are receiving training to improve accurate data entry.

North Middlesex University Hospital NHS Trust (RAP) reported some technical issues with the IT system resulting in a decrease in the recorded performance.

North West Anglia NHS Foundation Trust (RGN) reported that a new PAS had been installed in July 2019 leading to some data quality issues.

## 5. Additional information

Data for individual organisations is available at:
