# 1 Executive summary

This report presents a monthly summary of diagnostic waiting times and activity across the NHS in England. This monthly report is part of a routine series of publications produced by NHS England and NHS Improvement.

The data presented in this report measures the current waiting times of patients still waiting for any of 15 key diagnostic tests or procedures at the month end. This data is split by number of weeks waiting and by test. The waiting times reported are for those patients who have been referred for a test, but whose test had not taken place by the end of the reporting period. Referrals may be from a variety of sources including GPs.

One of the main measurements covered in this report is the number and proportion of patients waiting six weeks or more for a diagnostic test, from time of referral.

This six-week diagnostic wait was initially introduced as a 'milestone' from March 2008 towards achieving the standard Referral to Treatment wait of 18 weeks by December 2008, but diagnostic waiting times now form part of the NHS Constitution. This gives patients the legal right to treatment within 18 weeks of referral (18 week RTT) and as part of this, pledges that patients should not be required to wait six weeks or more for a diagnostic test.

NHS England and NHS Improvement's planning guidance states that there is a threshold of 1% for this pledge. The financial penalty for non-delivery of the standard is set out in the NHS Standard Contract 2020/21.

The 15 key diagnostic tests included in this report are:

## Imaging

- Magnetic Resonance Imaging (MRI)
- Computerised Tomography (CT)
- Non-obstetric Ultrasound
- Barium Enema
- Dual-Energy X-Ray Absorptiometry (DEXA) Scan

## Physiological Measurements

- Audiology Assessments
- Echocardiography
- Electrophysiology
- Neurophysiology – Peripheral Neurophysiology
- Respiratory Physiology – Sleep Studies
- Urodynamics – Pressures & Flows

## Endoscopy

- Gastroscopy
- Colonoscopy
- Flexible Sigmoidoscopy
- Cystoscopy

For detailed descriptions of each diagnostic test please see the [collection guidance documentation](#).

Some of the key terms used throughout this report are outlined below:

- **6+ Waits**  
A count of the number of patients waiting six weeks or more for a diagnostic test at month end from referral.
- **Activity**  
A count of the number of diagnostic tests undertaken during the month.
- **Diagnostic Test**  
A test or procedure of which the primary function is to identify a patient's disease or condition to allow a medical diagnosis to be made.
- **Waiting List**  
A count of the number of patients that are waiting for a diagnostic test at the end of the month.

A more comprehensive glossary is available in the Annex.

All England figures quoted are commissioner based. Commissioner based returns reflect data for patients for whom English commissioners are responsible.

## 1.1 National Statistics

The UK Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods; and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

## 2 June 2022 Key Findings

- Diagnostic test activity and waiting times have been impacted by the COVID-19 pandemic, which continues to affect the current reporting period and comparisons with previous years.
- The total number of patients waiting six weeks or more from referral for one of the 15 key diagnostic tests at the end of June 2022 was 430,000. This was 27.5% of the total number of patients waiting at the end of the month.
- Nationally, the operational standard of less than 1% of patients waiting six weeks or more was not met this month.
- Compared with June 2021 the total number of patients waiting six weeks or more increased by 123,900 while the proportion of patients waiting six weeks or more increased by 5.1 percentage points.
- In the last 12 months, the proportion of patients waiting six weeks or more at the end of a month has varied between 23.5% (July 2021) and 29.9% (January 2022).
- At the end of June 2022, the test with the smallest proportion of patients waiting six weeks or more was Barium Enema with 7.0%. The test with the highest proportion was Urodynamics, with 48.3% of patients waiting six weeks or more.
- An alternative measure of diagnostic waiting times is the average (median) waiting time. The estimated average time that a patient had been waiting for a diagnostic test was 3.1 weeks at the end of June 2022.
- There were 1,564,800 patients waiting for a key diagnostic test at the end of June 2022. This is an increase of 197,100 from June 2021.
- A total of 1,952,400 diagnostic tests were undertaken in June 2022. This is a decrease of 23,100 from June 2021.

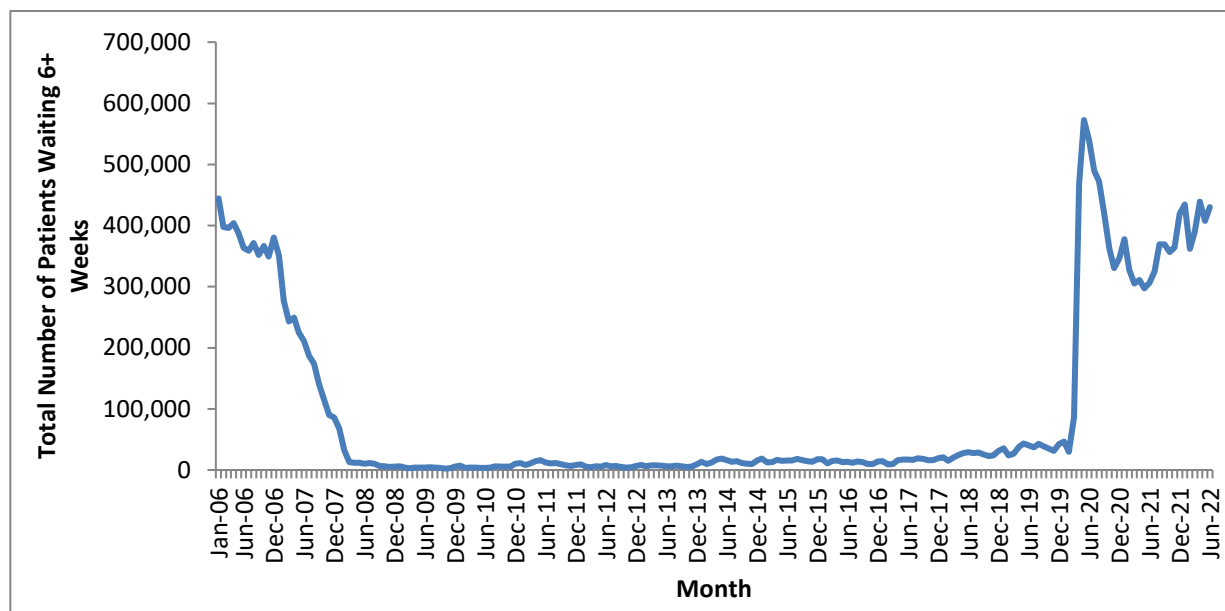

### 3 National Trends

This section analyses trends in monthly diagnostic waiting times and activity data that has been collected since January 2006.

#### 3.1 6+ Week Waits

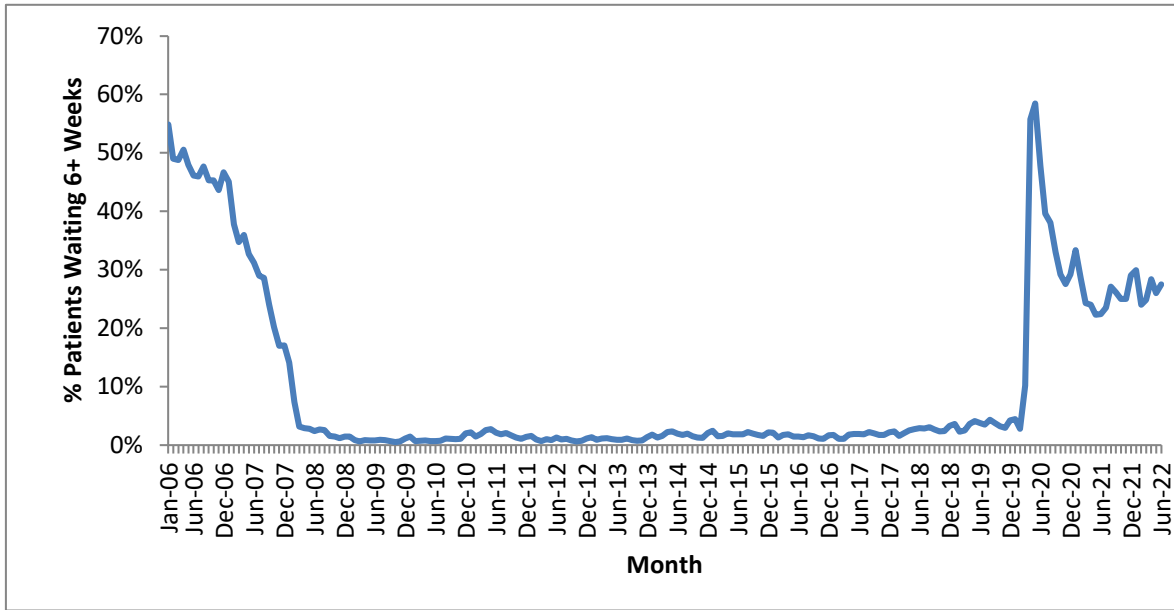

- 3.1.1. The total number of patients waiting six weeks or more dropped sharply between January 2007 and March 2008 (Chart 1), as Trusts worked towards the NHS Improvement Plan (June 2004) milestone that no one should wait six weeks or more for a diagnostic test by March 2008.
- 3.1.2. Since March 2008 there were fluctuations in the total number of patients waiting six weeks or more, with a significant rise between December 2013 and May 2014. The number of patients waiting six weeks or more rose sharply in April 2020 due to the impact of COVID-19. In June 2022 there was an increase of 22,700 in the number of patients waiting six weeks or more from the previous month.

Chart 1: Total number of patients waiting 6+ weeks at month end for all tests  
January 2006 to June 2022

- 3.1.3. The proportion of patients waiting six weeks or more shows a similar drop between January 2007 and the 6-week milestone in March 2008 before stabilising (Chart 2) prior to the COVID-19 period. In the last 12 months, the proportion of patients waiting six weeks or more at the end of a month has varied between 23.5% (July 2021) and 29.9% (January 2022). The 1% operational standard was last met in November 2013.

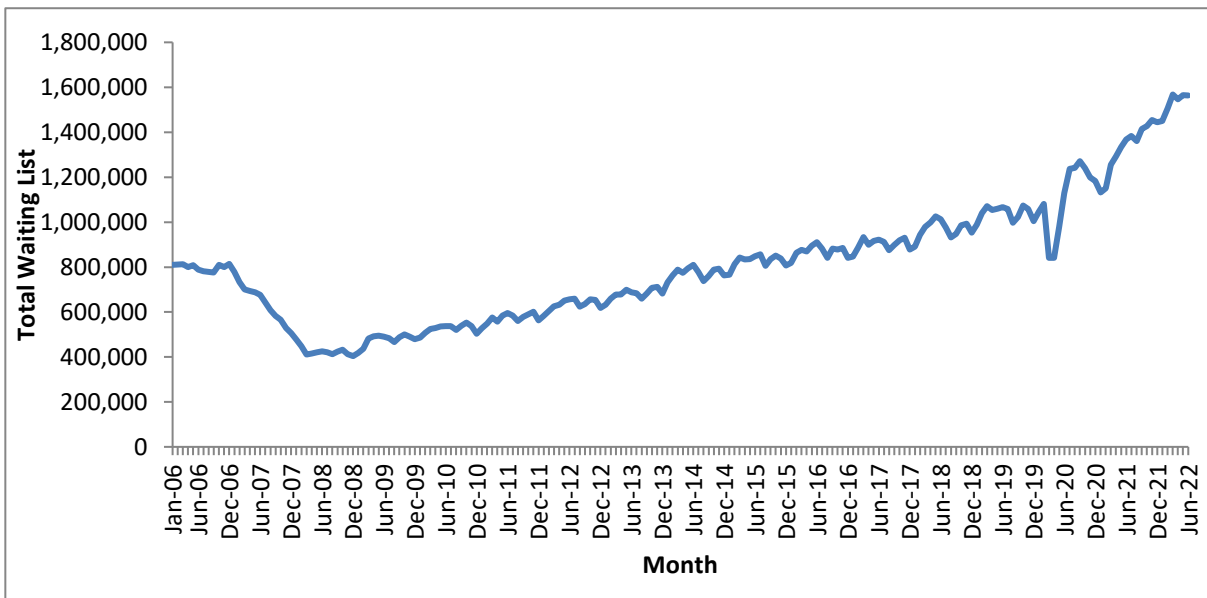

**Chart 2: Percentage of patients waiting 6+ weeks at month end for all tests  
January 2006 to June 2022**

### 3.2 Total Waiting List

3.2.1. As with the number and proportion of patients waiting six weeks or more, the total number of patients waiting at the month end dropped dramatically between January 2007 and the 6-week milestone in March 2008 (Chart 3). Following a period with a stable total waiting list between March 2008 and January 2009, the underlying trend showed a steady increase before dropping sharply in March 2020 and subsequently rising due to the impact of COVID-19.

**Chart 3: Total number of patients waiting at month end for all tests  
January 2006 to June 2022**

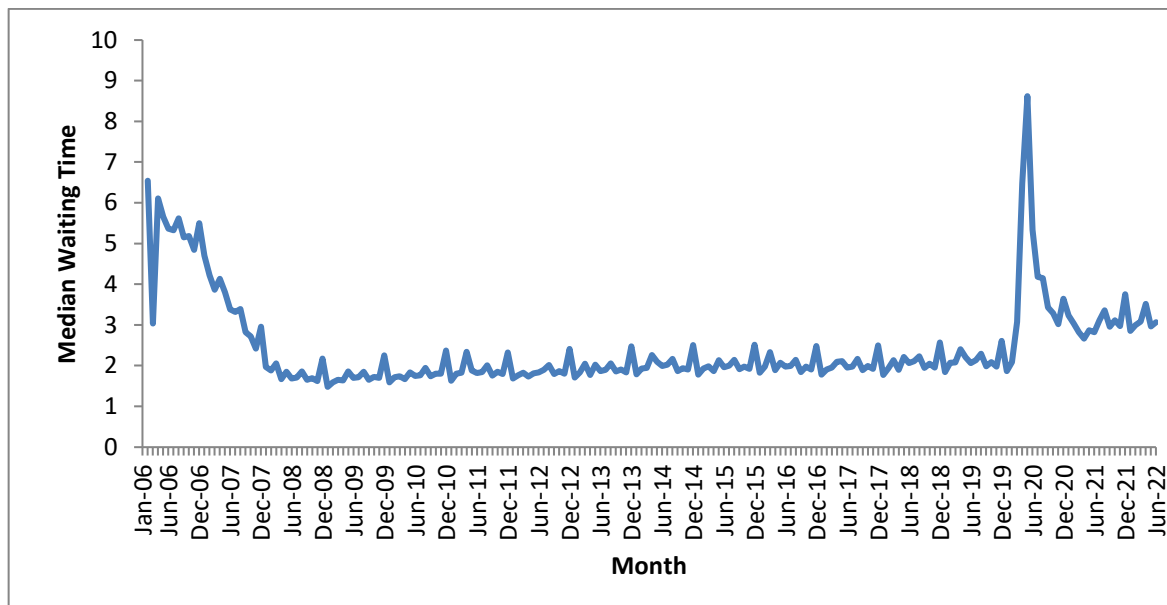

### 3.3 Median Waiting Time

3.3.1. The average (median) waiting time displays a similar trend to the total waiting list and 6 weeks or more waits. After a rapid decrease in the two years leading to the 6-week milestone, the median waiting time remained stable until the COVID-19 period (Chart 4). The data shows significant increases during December every year as a result of the higher number of bank holidays and resulting lower activity. In the last 12 months, the median waiting time had a high of 3.8 weeks (December 2021) and a low of 2.9 weeks (July 2021). The median waiting time in June 2022 was 3.1 weeks.

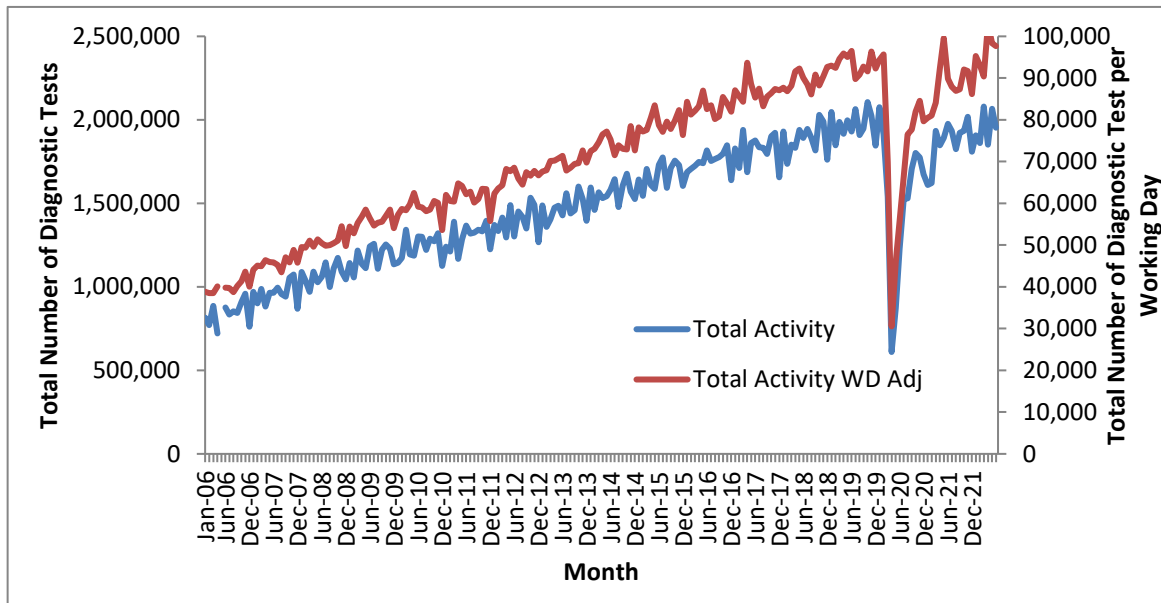

Chart 4: Median waiting time for all tests – January 2006 to June 2022

### 3.4 Total Activity

- 3.4.1. The monthly activity figure can fluctuate significantly month to month, with particularly notable decreases in December due to the bank holidays. However, the underlying trend has shown an increase since January 2006 until the COVID-19 period. If the data is adjusted to show activity per working day, the monthly variation becomes less pronounced (Chart 5).
- 3.4.2. Monthly activity decreased markedly following the start of the COVID-19 pandemic. Total activity in April 2020 fell by 68% compared to April 2019 but subsequently started to recover with some further set-backs.

**Chart 5: Total activity and working day adjusted activity per month for all tests  
January 2006 to June 2022**

Note: Activity data was not collected in May 2006 and all activity time series graphs will show missing values for that month

3.4.3. In the previous 12 months, individual tests have shown differing changes in activity. The tests with the largest decrease in activity were Barium Enema, Urodynamics and Cystoscopy where June 2022 activity was 0.9% lower per month than June 2021 (Table 1).

**Table 1: Total activity, by test – June 2021 and June 2022**

	Jun-21	Jun-22	Average monthly growth
MRI	304,768	311,899	0.2%
CT	588,795	598,375	0.1%
Non-obstetric Ultrasound	626,444	605,463	-0.3%
Barium Enema	3,424	3,079	-0.9%
Dexa Scan	38,111	39,079	0.2%
Audiology Assessments	83,564	82,493	-0.1%
Echocardiography	136,512	131,276	-0.3%
Electrophysiology	732	732	0.0%
Peripheral Neurophysiology	19,716	18,738	-0.4%
Sleep Studies	10,401	10,969	0.4%
Urodynamics	5,890	5,301	-0.9%
Colonoscopy	50,772	47,346	-0.6%
Flexi Sigmoidoscopy	18,019	16,457	-0.8%
Cystoscopy	29,108	26,029	-0.9%
Gastroscopy	59,253	55,179	-0.6%
<b>All Tests</b>	<b>1,975,509</b>	<b>1,952,415</b>	<b>-0.1%</b>

## 4 June 2022 Data

This section analyses the June 2022 diagnostic waiting times and activity data and includes comparisons between tests, regions, providers and commissioners.

6+ week waits performance became significantly worse from March to May 2020 due to the impact of the COVID-19 crisis but started to improve from June 2020.

### 4.1 6+ Week Waits

- 4.1.1. At the end of June 2022, there were a total of 430,000 patients waiting six weeks or more from referral for one of the 15 key diagnostic tests. This was 27.5% of the total number of patients waiting at the end of the month.
- 4.1.2. Compared with June 2021, the number of patients waiting six weeks or more increased by 123,900, while the proportion of patients waiting six weeks or more increased by 5.1 percentage points.
- 4.1.3. Compared with June 2021, the test with the largest increase in the proportion of patients waiting six weeks or more was Electrophysiology, which increased by 21.0 percentage points. The test with the largest decrease was Peripheral Neurophysiology, which decreased by 12.9 percentage points (Table 2).

**Table 2: Proportion of patients waiting 6+ weeks, by test – June 2021 and June 2022**

	Jun-21	Jun-22	Difference (%age points)
MRI	18.3%	24.2%	5.9
CT	15.2%	18.6%	3.5
Non-obstetric Ultrasound	15.0%	22.5%	7.6
Barium Enema	6.7%	7.0%	0.3
Dexa Scan	28.9%	31.8%	3.0
Audiology Assessments	19.7%	30.9%	11.2
Echocardiography	35.8%	45.4%	9.6
Electrophysiology	9.1%	30.1%	21.0
Peripheral Neurophysiology	32.6%	19.8%	-12.9
Sleep Studies	18.2%	33.4%	15.2
Urodynamics	48.3%	48.3%	0.0
Colonoscopy	40.2%	36.7%	-3.4
Flexi Sigmoidoscopy	40.4%	36.5%	-3.9
Cystoscopy	35.8%	33.1%	-2.7
Gastroscopy	40.2%	35.5%	-4.6
<b>All Tests</b>	<b>22.4%</b>	<b>27.5%</b>	<b>5.1</b>

Note: Figures may differ due to rounding.

- 4.1.4. Compared with June 2021, the test type with a reduction in the proportion of patients waiting six weeks or more was Endoscopy with a decrease of 3.9

percentage points. Physiological Measurement increased by 7.4 percentage points, while Imaging increased by 6.1 percentage points (Table 3). See section 5.4 for which tests are included under the different test types.

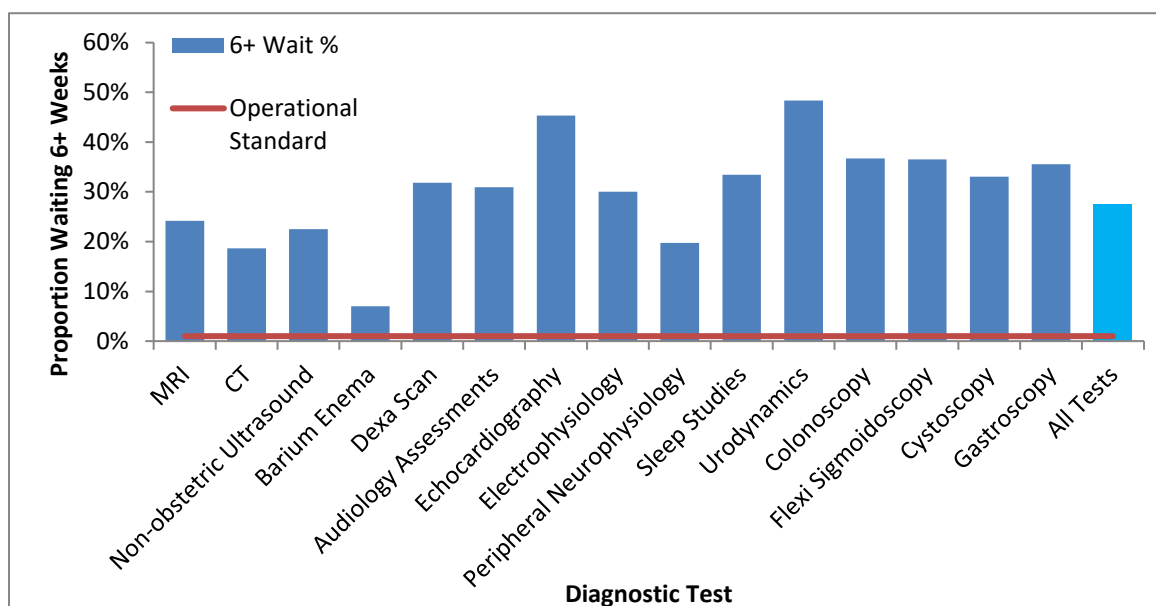

**Table 3: Proportion of patients waiting 6+ weeks, by test type – June 2021 and June 2022**

	Jun-21	Jun-22	Difference (%age points)
Imaging	16.7%	22.8%	6.1
Physiological Measurement	31.4%	38.8%	7.4
Endoscopy	39.7%	35.8%	-3.9
<b>Total</b>	<b>22.4%</b>	<b>27.5%</b>	<b>5.1</b>

Note: Figures may differ due to rounding.

- 4.1.5. The operational standard that less than 1% of patients should wait six weeks or more from referral for a diagnostic test was met in none of the 15 key tests this month. The test with the lowest proportion of patients waiting six weeks or more was Barium Enema (7.0%), whilst the test with the highest proportion was Urodynamics (48.3%) (Chart 6).

**Chart 6: Percentage of patients waiting 6+ weeks, by test – June 2022**

- 4.1.6. 129 of the 136 acute trusts that submitted data for June 2022 failed to meet the 1% operational standard.
- 4.1.7. All 107 Commissioners<sup>1</sup> failed to meet the 1% operational standard.
- 4.1.8. None of the seven NHS England and NHS Improvement Regional Teams met the 1% operational standard. The proportion of patients waiting six weeks or more for a diagnostic test varied by region between 14.3% (London) and 36.0% (Midlands) (Table 4).

<sup>1</sup> Includes NHS England and NHS Improvement

4.1.9. Feedback from NHS trusts has indicated that variations can exist between different regions due to a variety of reasons, from machines breaking down to staff shortages in trusts that usually only affect one region.

**Table 4: June 2022 Diagnostic Waiting Times and Activity by Regional Team\***

Region	Number of patients waiting six weeks or more at month end	Percentage of patients waiting six weeks or more at month end	Total number of patients waiting at month end	Total activity undertaken in month	Median waiting time
London	30,350	14.3%	212,767	322,490	2.4
South West	53,764	33.7%	159,383	183,513	3.7
South East	47,039	22.6%	207,971	275,897	2.8
Midlands	127,349	36.0%	353,530	351,608	3.9
East of England	65,749	32.9%	199,877	217,605	3.6
North West	48,295	24.9%	193,930	279,401	2.8
North East and Yorkshire	56,826	24.2%	234,379	309,169	2.9
<b>England</b>	<b>430,037</b>	<b>27.5%</b>	<b>1,564,840</b>	<b>1,952,415</b>	<b>3.1</b>

\*Includes all independent sector providers and excludes centrally commissioned.

## 4.2 Total Waiting List

4.2.1. At the end of June 2022 there were a total of 1,564,800 patients still waiting for a diagnostic test. This is an increase of 197,100 (14.4%) from June 2021.

4.2.2. The test with the largest waiting list was Non-obstetric Ultrasound, which accounted for 34.6% of the total waiting list, or 541,400 patients. The test with the smallest waiting list was Electrophysiology, which accounted for 0.06% of the total waiting list, or 1,000 patients (Table 5).

**Table 5: Total number of patients waiting at month end, by test – June 2021 and June 2022**

	Jun-21	Jun-22	Growth (%age)
MRI	275,436	285,223	3.6%
CT	163,265	183,153	12.2%
Non-obstetric Ultrasound	447,993	541,383	20.8%
Barium Enema	2,216	1,773	-20.0%
Dexa Scan	52,755	60,052	13.8%
Audiology Assessments	56,467	79,976	41.6%
Echocardiography	142,408	173,360	21.7%
Electrophysiology	638	988	54.9%
Peripheral Neurophysiology	30,416	25,368	-16.6%
Sleep Studies	9,843	17,150	74.2%
Urodynamics	7,841	7,832	-0.1%
Colonoscopy	63,459	72,167	13.7%
Flexi Sigmoidoscopy	24,377	24,607	0.9%
Cystoscopy	20,452	22,771	11.3%
Gastroscopy	70,140	69,037	-1.6%
<b>All Tests</b>	<b>1,367,706</b>	<b>1,564,840</b>	<b>14.4%</b>

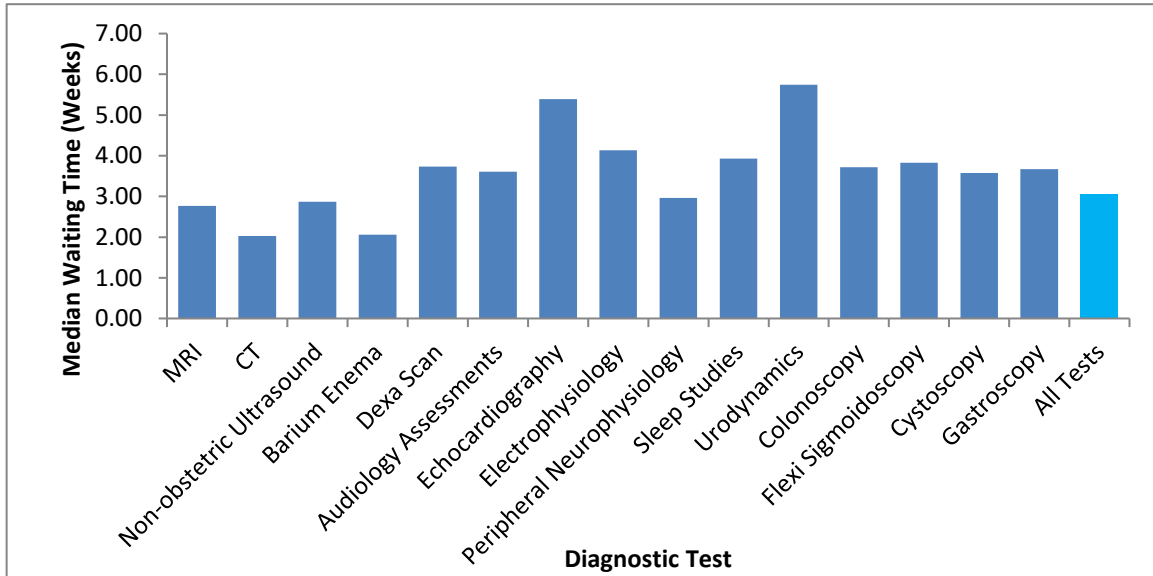

Note: Barium Enema is a test that should be replaced by Colonoscopy or CT Colonography, so the number of tests undertaken should be reducing.

4.2.3. The largest increase in the number of patients waiting by test has been for Sleep Studies where the waiting list grew by 74.2% compared with June 2021.

### 4.3 Median Waiting Times

4.3.1. At the end of June 2022, the estimated median waiting time for all 15 diagnostic tests was 3.1 weeks from the time of referral, up from 3.0 weeks in the previous month. The test with the shortest median waiting time was CT at 2.0 weeks. The test with the longest median waiting time was Urodynamics at 5.7 weeks (Chart 7).

Chart 7: Median waiting time by test – June 2022

## 4.4 Total Activity

- 4.4.1. In total 1,952,400 of the 15 key diagnostic tests were performed during June 2022. This is a decrease of 23,100 (8.7%) from June 2021 (Table 6).
- 4.4.2. The test with the highest activity was Non-obstetric Ultrasound with 605,500 tests taking place. This accounted for 31.0% of all activity in June 2022. The test with the lowest activity was Electrophysiology with 700 tests taking place. This accounted for 0.04% of all activity this month.
- 4.4.3. The number of tests conducted over the last 12 months has increased by 11.7% from the same period last year.

**Table 6: Total activity and growth, by test – June 2021 and June 2022**

Note: Barium Enema is a test that should be replaced by Colonoscopy or CT Colonography, so the number of tests undertaken should be reducing.

	Jun-22	Jun-21	YTD 22/23	YTD 21/22	Growth Jun 22 vs Jun 21	Growth YTD 22/23 vs YTD 21/22	Adjusted Growth Jun 22 vs Jun 21	Adjusted Growth YTD 22/23 vs YTD 21/22
MRI	311,899	304,768	945,420	883,605	2.3%	7.0%	12.6%	10.6%
CT	598,375	588,795	1,795,827	1,730,516	1.6%	3.8%	11.8%	7.3%
Non-obstetric Ultrasound	605,463	626,444	1,810,733	1,806,342	-3.3%	0.2%	6.3%	3.6%
Barium Enema	3,079	3,424	8,738	9,245	-10.1%	-5.5%	-1.1%	-2.3%
Dexa Scan	39,079	38,111	116,174	105,224	2.5%	10.4%	12.8%	14.1%
Audiology Assessments	82,493	83,564	249,977	231,504	-1.3%	8.0%	8.6%	11.6%
Echocardiography	131,276	136,512	395,314	390,629	-3.8%	1.2%	5.8%	4.6%
Electrophysiology	732	732	2,476	2,224	0.0%	11.3%	10.0%	15.1%

Sleep Studies	10,969	10,401	31,694	29,024	5.5%	9.2%	16.0%	12.9%
Urodynamics	5,301	5,890	15,639	17,172	-10.0%	-8.9%	-1.0%	-5.8%
Colonoscopy	47,346	50,772	142,559	147,439	-6.7%	-3.3%	2.6%	0.0%
Flexi Sigmoidoscopy	16,457	18,019	49,729	53,183	-8.7%	-6.5%	0.5%	-3.3%
Cystoscopy	26,029	29,108	79,734	81,801	-10.6%	-2.5%	-1.6%	0.8%
Gastroscopy	55,179	59,253	169,687	174,193	-6.9%	-2.6%	2.4%	0.7%
<b>All Tests</b>	<b>1,952,415</b>	<b>1,975,509</b>	<b>5,869,094</b>	<b>5,715,152</b>	<b>-1.2%</b>	<b>2.7%</b>	<b>8.7%</b>	<b>6.2%</b>

## 5 Annex

### 5.1 Methodology

5.1.1. NHS England and NHS Improvement compiles diagnostic waiting time and activity data through a central return. Data collected includes:

- The number of patients waiting at the month end, split by test and week.
- Total activity classified as either Waiting List tests (excluding planned), Planned tests, or Unscheduled tests.

5.1.2. Providers submit data to NHS England and NHS Improvement via SDCS where it is checked and signed off by commissioners. For further details on how the data is collected and the SDCS system, please refer to the [NHSE Collection Guidance](#).

### 5.2 Data Revisions

5.2.1. Revisions to published figures are released on a six-monthly basis and in accordance with the NHS England's revision policy. For more information on the revision policy please refer to the [SDCS Revisions Policy Document](#). Revisions were last published in August 2022 for the months January 2021 through to January 2022.

### 5.3 Data Availability

5.3.1. Monthly diagnostic waiting time and activity data is published on a monthly timetable. [A full calendar of all statistical publications can be found here](#).

### 5.4 Glossary

#### **Clinical Commissioning Group (CCG)**

A group of GP practices, which working with other healthcare professionals and in partnership with local communities and local authorities, commission NHS services for patients within their local communities.

#### **Endoscopy**

A categorisation of diagnostic tests that include: Colonoscopy; Flexi Sigmoidoscopy; Cystoscopy and Gastroscopy.

#### **Imaging**

A categorisation of diagnostic tests that include: Magnetic Resonance Imaging (MRI); Computed Tomography (CT); Non-obstetric Ultrasound; Barium Enema and DEXA Scan.

#### **Median Waiting Time**

A measurement of the average time patients have been waiting for a diagnostic test. The median is the middle value when waiting times are put in numerical order. 50% of patients have been waiting less than the median. The median is the preferred measurement of average waiting time as it is less susceptible to extreme values than the mean.

## **Physiological Measurement**

A categorisation of diagnostic tests that include: Audiology Assessments; Echocardiology; Electrophysiology: Peripheral Neurophysiology; Sleep Studies and Urodynamics.

## **Provider**

An organisation that provides NHS treatment or care, for example, an NHS Acute Trust, Mental Health Trust, Community provider, or an Independent Sector organisation.

## **Region**

One of seven geographical areas of NHS England and NHS Improvement responsible for the quality, financial and operational performance of all NHS organisations in their region.

## **5.5 Feedback Welcomed**

We welcome feedback on the content and presentation of statistics within this report and those published on the NHS England website.

If you have any comments on this, or any other issues regarding these statistics, then please email [england.nhsdata@nhs.net](mailto:england.nhsdata@nhs.net)

Alternatively, we welcome your comments via our user feedback form [here](#).

Feedback about the user's experiences of using these statistics is available [here](#).

## **5.6 Consultation**

Between 8 February 2018 and 5 April 2018, NHS England and NHS Improvement consulted on the future of the Quarterly Diagnostics Census and Monthly Diagnostics Waiting Times and Activity Returns. The outcome document for the consultation was published 30 March 2020 and confirmed the decision to stop collecting the Quarterly Diagnostics Census on a permanent basis and to continue the monthly diagnostics waiting times and activity return (DM01) in its current form. Find out more at: <https://www.engage.england.nhs.uk/consultation/diagnostics-census-waiting-times-activity-return>

## **5.7 Additional Information**

[Full details of diagnostics data for individual organisations are available here.](#)

For press enquiries please contact the NHS England media team on 0113 825 0958 or 0113 825 0959. Email enquiries should be directed to [nhsengland.media@nhs.net](mailto:nhsengland.media@nhs.net)
