

# Time to Think Ebola

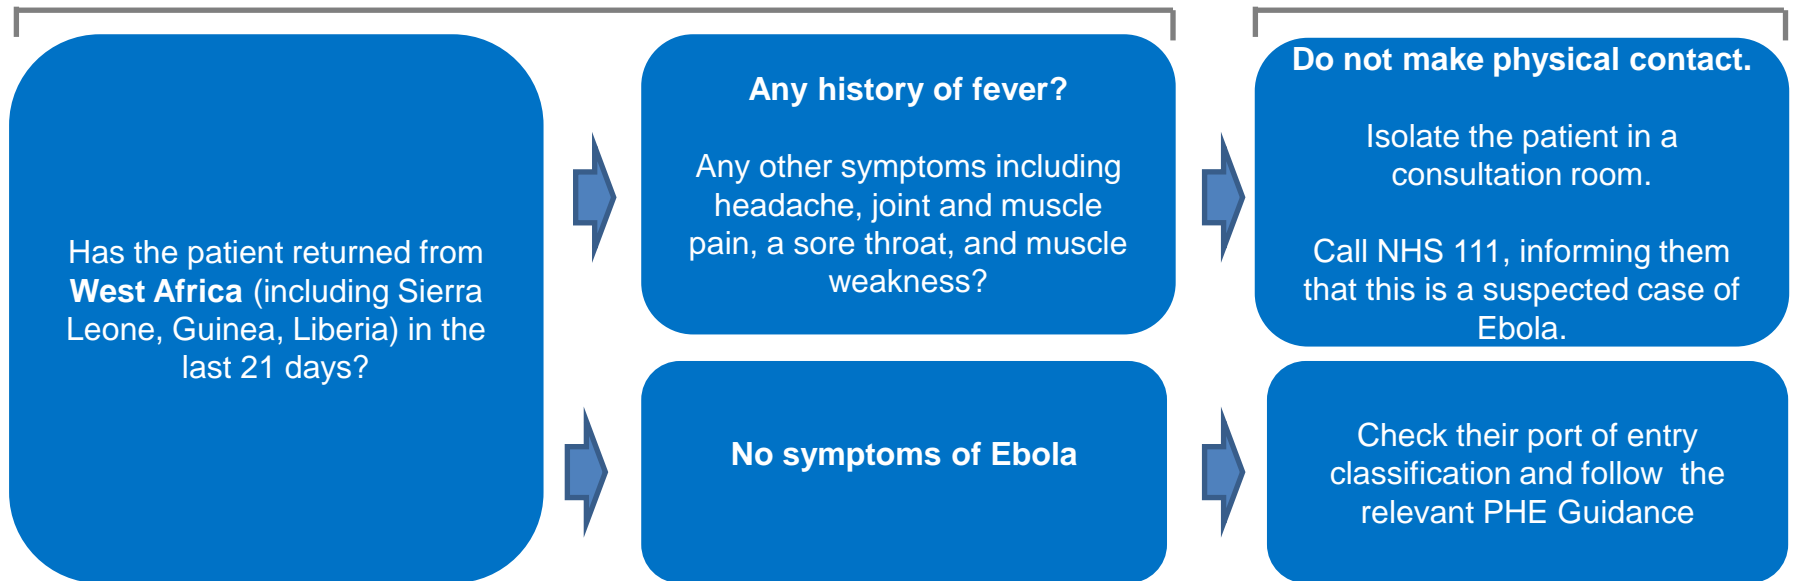

## Information for dental staff

**A message from Professor Sir Bruce Keogh, National Medical Director and Barry Cockcroft, Chief Dental Officer:**

So far over 10,000 cases of Ebola have been recorded and up to 50% of patients have died, making this the worst Ebola epidemic in history. Currently there is no known cure. With extensive global travel, it is important to be mindful and vigilant of Ebola when patients present for dental care.

### THINK

### DO
