

E06/S/a

2013/14 NHS STANDARD CONTRACT FOR METABOLIC DISORDERS (ADULT)

PARTICULARS, SCHEDULE 2 – THE SERVICES A. SERVICE SPECIFICATIONS

Service Specification No.	E06/S/a	
Service	Metabolic Disorders (Adult)	6
Commissioner Lead		
Provider Lead		0
Period	12 months	
Date of Review		NOV.

1. Population Needs

1.1 National/local context and evidence base

National Context

Inherited Metabolic Disorders (IMDs) cover a group of over 600 individual conditions, each caused by defective activity in a single enzyme or transport protein. Although individually metabolic conditions are rare, the incidence being less than 1.5 per 10,000 births, collectively they are a considerable cause of morbidity and mortality. The diverse range of conditions varies widely in presentation and management according to which body systems are affected. For some patients presentation may be in the newborn period, whereas for others with the same disease (but a different genetic mutation) onset may be later, including adulthood.

Without early identification and/or introduction of specialist diet or drug treatments, patients face severe disruption of metabolic processes in the body such as energy production, manufacture of breakdown of proteins, and management and storage of fats and fatty acids. The result is that patients have either a deficiency of products essential to health or an accumulation of unwanted or toxic products. Without treatment many conditions can lead to severe learning or physical disability and death at an early age.

The rarity and complex nature of IMD requires an integrated specialised clinical and laboratory service to provide satisfactory diagnosis and management. This is in keeping with the recommendation of the Department of Health's UK Plan for Rare Disorders consultation to use specialist centres.

Approximately 10-12,000 paediatric and adult patients attend UK specialist IMD centres, but a significant number of patients remain undiagnosed or are 'lost to

1

follow-up'. These patients would benefit from early investigation and regular specialist monitoring to minimise major organ crises in later life.

Approximately 1,000 new paediatric and adult IMD patients are identified each year.

IMD clinical disease is lifelong, usually progressive and may affect one or more organ systems. Management requires a co-ordinated approach from the core IMD multidisciplinary team, comprising IMD medical, dietetic, nursing staff, with access to IMD laboratory expertise as well as support from many different medical specialties and professions allied to medicine. Undiagnosed or 'lost to follow-up' patients may present to almost any medical specialty and may be subject to several inconclusive investigations for individual symptoms. Increased professional education, together with expertise concentrated in a limited number of centres, allows for the earlier recognition, diagnosis and treatment of the underlying IMD condition and its potential complications, leading to reduced disease burden.

Current and proposed newborn bloodspot screening programmes identify some IMD conditions; in these circumstances, other family members may require advice or medical investigation. New technologies for diagnosis and more effective treatments promote improved survival rates and quality of life.

The IMD specialty covers the following service specifications:

- Specialised Services for Inherited Metabolic Disorders (paediatrics)
- Specialised Services for Inherited Metabolic Disorders (adults)
- Specialised Services for Inherited Metabolic Disorders (laboratory services) Approved IMD centres will be the primary providers for the IMD service. Individual centres that are unable to fulfill all components of the service specification (for example, the 24-hour telephone advisory service commitment) will form clinical networks with adjacent approved centres

Evidence Base

A major needs assessment, Metabolic Pathways, Networks of Care (Hilary Burton, Public Health Genetics, 2005) (<u>www.phgfoundation.org</u>), concluded that there is wide variation of service provision across the UK, few dedicated IMD consultants, specialist IMD dietitians and specialist nursing staff, and poor outreach clinic provision.

The Department of Health consultation in May 2012 in response to the Genetic Alliance's UK Rare Disease Strategy (<u>www.raredisease.org.uk</u>) highlights the problems of commissioning services where there are low patient volumes, and proposes 'hub and spoke' networks of clinical and laboratory units, and active participation in patient registers for service planning and research purposes.

The specialty's professional bodies for clinical and laboratory services, including British Inherited Metabolic Disease Group (<u>www.bimdg.org.uk</u>) and MetBioNet (<u>www.metbio.net</u>) provide key clinical guidelines.

NICE guidance on Familial Hypercholesterolaemia (FH) recommended that paediatric patients are referred to specialised IMD centres (www.nice.org.uk)

Specialised Metabolic Disorders Services (all ages), Specialised Services National Definitions Set No 36 (3rd ed), 2009 (www.bimdg.org.uk)

Rare Disease Centres Proposal, Advisory Group for National Specialised Services (www.bimdg.org.uk)

Our Inheritance, Our Future: Realising the potential of genetics in the NHS, Department of Health 2003 (<u>www.dh.gov.uk</u>)

2. Scope

2.1 Aims and objectives of service

Aims of Specialised IMD centres

The service aims to identify and diagnose patients who are suspected of having an IMD, to improve life expectancy and quality of life for adults affected by one of the IMDs detailed in Appendix 1 (list of IMD conditions for proposed ICD11 (a global health information standard) codes).

Objectives of specialised IMD centres

The adult IMD Centre will:

- provide 24/7 access to clinical advice in conjunction with other adult and paediatric centres in an agreed service provider network
- provide high-quality clinical expertise in accordance with national policy and guidance where available or in agreement with accepted clinical practice to:
 - provide timely diagnosis with appropriate counselling and psychological support to the patient and family/carers
 - provide dedicated IMD inpatient and outpatient facilities
 - provide high quality proactive diet and/or drug treatment and care
 - agree and monitor compliance of care pathways and treatment protocols (elective and emergency)
 - ensure smooth transition from paediatric to adult care
 - ensure equity of access to services for the IMD population
 - provide in-house training and education for IMD physicians completing Royal College of Physicians and Royal College of Pathology metabolic training programme
- provide expert advice and education to primary, secondary¹ and tertiary care provider units under agreed shared care arrangements where clinically appropriate, and to professionals of other specialised services, e.g. nephrology, cardiology, neurology, linked to IMD conditions

¹ inc Orthopaedics, gastroenterology, urology, gynaecology, etc

• provide expert advice to non-medical professionals, including local authorities and the voluntary sector, to facilitate holistic care for IMD patients and support to their families/carers.

2.2 Service description/care pathway

Overview

IMDs are inherited lifelong conditions and patients will access routine care and ongoing specialised care provided by appropriately trained specialist clinical staff throughout their lifetime. The IMD centre will provide care related to the patient's IMD condition. The configuration of care provision will be based on local prevalence, expertise and availability of designated IMD service providers. The IMD centres will liaise with other NHS Trusts to provide appropriate and sustainable outreach clinics All adult and paediatric IMD centres will establish formal links and referral pathways, and will work co-operatively to ensure 24/7 telephone advice service within agreed network configurations. The centre will agree with the nominated Area Team (AT) of NHS England to:

- take lead clinical responsibility for managing the care of referred IMD patients. register all consented patients on an IMD Centre patient database in preparation for a proposed National IMD Register, and to ensure that individual records are complete and up-to-date
- provide appropriate clinical care in outreach facilities
- generate and publish evidence of effective treatments
- support the production of a national training and development plan for all healthcare staff involved in the delivery of IMD services
- participate in and contribute to national and international research programmes, in collaboration with the IMD Clinical Reference Group (CRG), to enhance professional understanding of individual syndromes.

Patient Pathway

Patients with IMDs will require access to expert care and advice throughout their lives. The patient's condition will require regular monitoring, supported by laboratory and other diagnostic tests. In some circumstances, there may be opportunities for shared care arrangements with primary and/or secondary care providers, but all patients will require regular follow-up attendances and support from the centre or outreach clinic

Referral

The adult IMD centre will:

- Accept referrals from:
 - another NHS IMD consultant
 - IMD paediatric centres as part of the patient transition programme
 - the patient's GP, and secondary and tertiary care consultants (where it is agreed with the IMD Centre that the patient's symptoms suggest an underlying metabolic disorder)

- designated IMD laboratories
- operate a single referral list
- provide a 24/7 telephone advice service under an agreed provider network for referral or for patients with acute severe illness that may be caused by an IMD
- provide inpatient facilities to stabilise and monitor clinically appropriate patients
- carry out a core IMD MDT assessment of all referred patients within three months for non-urgent referrals
- provide access to and co-ordinate results and assessment from a range of diagnostic tests and from expertise in other specialties where appropriate

Initial Care

The adult IMD centre will:

- offer all patients with a confirmed diagnosis of IMD a complete assessment, as per published U.K. guidelines where available or as clinically indicated for IMD syndromes for which guidelines do not exist.
- establish a baseline against which disease progression and response to treatment can be measured
- agree the need for any therapeutic intervention, either specific or supportive
- offer treatment to all patients who might potentially benefit; eligibility for treatment to be determined as set out in relevant guidelines or as clinically indicated
- provide immediate care for patients with acute severe illness resulting from an IMD. Commence therapy for eligible patients within 12 weeks of:
 - initial referral for those already diagnosed or
 - from receipt of a firm diagnosis for those referred to the designated centres for further testing
- provide age-appropriate written and/or electronic material, including provision of information in the patient/family's first language, relating to the IMD condition to patients and their families/carers

Ongoing care

The adult IMD centre will provide:

- a minimum annual core IMD MDT review of all patients
- regular patient reviews as per national guidelines or clinical practice with written and electronic records of current treatment and patient response
- access to inpatient and critical care facilities where appropriate
- access to other specialised services, e.g. hepatology, cardiology, etc., as appropriate
- appropriate pharmaceutical and dietary therapy
- regular laboratory and other diagnostic tests as appropriate to monitor patient response to diet and/or medication
- patient-centred services, sensitive to the individual's physical, psychological and emotional needs and supported through the provision of patient-appropriate information (as above)
- access to appropriate shared care arrangements with primary and/or

secondary care providers

- options for home therapy where appropriate, supported by regular clinical monitoring
- clinical nurse specialist telephone advice service for patients and their families/carers, healthcare professionals and non-healthcare and voluntary sector professionals

Outreach Clinics

Clinicians and commissioners will work together to identify patient cohorts with poorer geographic access to IMD Centres, and to promote appropriate outreach facilities and local support structures.

Transition from paediatric to adult IMD services

Paediatric and adult IMD centres will develop close working relationships within local networks. The centres will work together to ensure smooth and effective transition of patients to appropriate facilities according to best practice guidelines.

The adult IMD centre will:

- accept referrals by IMD Consultant Paediatricians of appropriate adolescents
- provide an agreed period of joint paediatric/adult clinics to ensure seamless transfer of adolescent IMD patients to adult services
- agree and provide formalised operational transition policy in each unit
- provide age-appropriate written and/or electronic information to patients and their families/carers (as above)

Palliative or end-of-life care

The adult IMD centre will:

- provide symptom control where appropriate for patients with untreatable or degenerative conditions
- liaise actively with NHS and non-NHS professionals to ensure access to appropriate palliative or end-of-life services
- monitor patient response on a regular basis
- generate and publish evidence of effective palliative or end-of-life care for adult patients with IMDs.

Infrastructure requirements

Approved centres are the primary providers for IMD services. Individual centres that are unable to fulfill all components of the service specification, for example the 24-hour on-call commitment) will form formal clinical networks with other adjacent approved centres. IMD centres will provide outreach clinics where appropriate.

Each adult IMD centre will be staffed by a core team from a range of suitably qualified health professionals including the following people:

• A named service/business manager

- At least 2 wte specialised IMD physicians
- At least 1 wte Senior Specialist IMD dietitian (**) supported by a dietetic team capable of delivering the service
- At least 1 wte Specialist IMD nurse supported by a nursing team capable of delivering the service
- Therapists, including physiotherapist, occupational therapist and psychotherapist
- A named pharmacist
- A unit secretary responsible for triaging telephone enquiries and correspondence
- Appropriate administrative and clerical support for the proper management of the service

(**) Specialist IMD dietitian – minimum qualifications of MSc qualification in nutrition and dietetics, or equivalent specialist experience; will be registered with the statutory regulatory body, the Health Professions Council (HPC) and the professional body, the British Dietetic Association (BDA. The minimum dietetic caseload is 100 patients per annum, dependent upon casemix

The centre will have formal arrangements with one or more designated IMD laboratory (see separate IMD Laboratory Services specification) for the biochemical diagnosis and monitoring of IMD patients. Such arrangements will include regular meetings with the laboratory IMD Consultant Clinical Scientist and other appropriate laboratory staff to discuss the interpretation of results.

The IMD centre will have access to expert opinion and support from other specialised clinical services, e.g. intensive care, cardiology, nephrology, neurology, etc., and will provide access to all services including social work support, commonly found in a regional acute hospital.

Patient registers/database

Accurate coding and classification of rare disorders is necessary for determining correct management, providing information on outcome and directing research. The value of such registers to patients is discussed in the chapter 'Empowering those affected by rare conditions' in the Department of Health's 2012 document 'Consultation on the United Kingdom Plan for Rare Diseases'.

The IMD centre will ensure that all patients are invited to have their information collected and entered onto a national IMD register.

All IMD centres and laboratories will co-operate in developing a national register of research trials and outcomes.

Annual reports

The IMD centre will produce annual audit and governance reports – see Section 4.

Pregnancy

Pregnant women with pre-existing conditions as discussed in this specification require assessment and/or management from highly specialist tertiary maternity care delivered within a dedicated multidisciplinary service staffed by a maternal medicine specialist, a physician, and supporting multidisciplinary team with extensive experience of managing the condition in pregnancy.

In view of this, nationally commissioned condition specific services must have outreach arrangements with highly specialized tertiary maternity units with access to appropriate tertiary medical, surgical, fetal medicine, clinical genetics and level 3 Neonatal Intensive Care services. These specialized maternity services must have a critical mass of activity to maintain expertise, ensure best practice, training opportunities and for the organizational infrastructure, staffing, facilities and equipment to be clinically and economically efficient. They should have robust risk management and performance monitoring processes.

All such women must receive personalized pre-pregnancy and maternity care planning from specialised tertiary maternity services to allow optimal disease management in the context of the pregnancy. This will reduce avoidable morbidity, mortality and unnecessary intervention for mother and baby.

Women with conditions discussed in this specification must be referred immediately once they are pregnant to plan their care. This must include access to termination of pregnancy and specialist advice re contraception. The individualised care plan must cover the ante natal, intrapartum and postnatal periods. It must include clear instructions for shared care with secondary services, when appropriate including escalation and transfer protocols and clear guidelines for planned and emergency delivery.

2.3 Population covered

The service outlined in this specification is for patients ordinarily resident in England(*); or otherwise the commissioning responsibility of the NHS in England (as defined in Who Pays?: Establishing the responsible commissioner and other Department of Health guidance relating to patients entitled to NHS care or exempt from charges).

(*) Note: For the purposes of commissioning health services, this EXCLUDES patients who, whilst resident in England, are registered with a GP practice in Wales, but INCLUDES patients resident in Wales who are registered with a GP practice in England.

Specifically, the service is commissioned for all diagnosed IMD patients and patients referred with a suspected IMD condition listed in Appendix 1, irrespective of gender, age, sex, disability or religious belief.

2.4 Any acceptance and exclusion criteria

Acceptance criteria

The adult IMD centre will accept referral of a patient with an IMD diagnosis or a patient with a suspected IMD condition as listed in Appendix 1 by the following professionals:

- Another NHS IMD consultant
- The patient's GP, and secondary and tertiary care consultants where it is agreed that the patient's symptoms suggest an underlying metabolic disorder.
- Designated IMD laboratories

Exclusions

The specification excludes:

- Treatment of adult patients with Heterozygous Familial Hypercholesterolaemia (Heterozygous FH); these patients should be referred to local district general hospital Lipid Clinics
- Adult critical care
- Surgical procedures and interventions including:
 - Haemopoetic Stem Cell Transplants (HSCT)
 - Bone Marrow Transplantation (BMT)
 - Organ transplants, e.g. liver, kidney
 - Spinal surgery/botox
 - Renal dialysis
- Pre-implantation genetic diagnosis
- Investigational drugs and procedures that are part of a research protocol

2.5 Interdependencies with other services

Co-located services

Appropriate critical care facilities

Interdependent services

Specialised IMD laboratory services, and other diagnostic tests.

Many IMD patients have co-morbid medical syndromes, including cardiac, renal and neurological conditions. It is therefore essential that centres establish and maintain strong clinical links with other specialised services as follows:

- Specialised Blood and Marrow Transplantation Services (all ages)
- Specialised Services for Women's Health (adult)
- Assessment and Provision of Equipment for People with Complex Physical Disabilities (all ages)

- Specialised Spinal Services (all ages)
- Specialised Rehabilitation Services for Brain Injury and Complex Disability (adult)
- Specialised Neurosciences Services (adult)
- Specialised Renal Services (adult)
- Specialised Cardiology and Cardiac Surgery Services (adult)
- Specialised Services for Liver, Biliary and Pancreatic Medicine and Surgery (adult)
- Medical Genetics Services (all ages)
- Specialised Mental Health Services (all ages)
- Specialised Rheumatology Services (all ages)
- Specialised Endocrinology Services (adult)
- Specialised Respiratory Services (adult)
- Specialised Orthopaedic Services (adult)
- Specialised Ophthalmology Services (adult)

Related services

IMD conditions are life-long, and centres will need to establish links with primary and secondary care units, particularly where there are shared care arrangements, as well as non-NHS professionals such as social services, education and patient groups.

3. Applicable Service Standards

3.1 Applicable national standards e.g. NICE, Royal College

The key service policy and legislative documents which support the provision of high quality IMD services are listed below. This specification is not intended to duplicate, replicate or supersede these policies and guidelines but to build upon them.

Core Standards	NICE CG071 Familial Hypercholesterolaemia, NICE August 2008 (<u>www.nice.org.uk</u>)
Recommended Standards	Rare Disease Centres Proposal, Advisory Group for National Specialised Services (AGNSS), 2011 (www.bimdg.org.uk)
	Metabolic Pathways, Networks of Care, Hilary Burton, Public Health Genetics Unit (PGHU), 2005 (www.phgfoundation.org)
	NHS Specialised Services Definition No.36: Specialised Metabolic Disorders (all ages) 3 rd edition, 2010 (<u>www.bimdg.org.uk</u>)

4. Key Service Outcomes

The aim of the IMD service is to identify and diagnose patients who are suspected of having an IMD, and to reduce levels of morbidity and mortality of diagnosed patients. The centres will work with the CRG Quality lead to develop key service outcomes through national quality dashboards and CQUINs. Baseline and comparative data will be dependent upon information provided by each centre prior to the introduction of national initiatives including:

- National patient register
- National register of research trials and outcomes
- Annual audit / governance report

Process measures from designated centres will be used as a proxy for outcomes of:

- Early diagnosis
- Improved patient life expectancy
- Prevention of avoidable death from IMD or its complications
- Improved quality of life (patient/family questionnaires)
- Fewer investigations in other specialties, e.g. cardiology, nephrology, etc.

isease group / disease	ICD10	OMIM
1. Disorders of amino acid and peptide metabolism		
1.1. Urea cycle disorders and inherited hyperammonaemias		
1.1.1. Carbamoylphosphate synthetase I deficiency		237300

2.	4.1. Glycerol kinase deficiency		307030
2.4	4.2. Complex glycerol kinase deficiency due to contiguous gene deletion		300679
2.5.	Disorders of glyoxylate metabolism		
	5.1. Primary hyperoxaluria type I		260000
2.	5.2. Primary hyperoxaluria type II		260000
2.6.	Disorders of glucose transport		
	6.1. Glucose transporter 1 deficiency (blood-brain barrier)		606777
	6.2. Glucose transporter 2 deficiency		227810
2.	6.3. Glucose/galactose malabsorption		606824
2.7.	Disorders of gluconeogenesis		
	7.1. Fructose-1,6-bisphosphatase deficiency		229700
2.	7.2. Pyruvate carboxylase deficiency		266150
2.	7.3. Phosphoenolpyruvate carboxykinase deficiency	E744	261650
2.8.	Glycogen storage disorders		
2.	8.1. Glycogen storage disease type 1a		232200
2.	8.2. Glycogen storage disease type 1b	1	232220

2.8.3. Glycogen storage disease type II		232300
Disease group / disease	ICD10	OMIM
2.8.4. Glycogen storage disease type III		232400
2.8.5. Glycogen storage disease type IV		232500
2.8.6. Glycogen storage disease type V		232600
2.8.7. Glycogen storage disease type VI		232700
2.8.8. Glycogen storage disease type VII		232800
2.8.9. Glycogen storage disease type IX		306000
2.8.9.1. Hepatic phosphorylase kinase deficiency		306000
2.8.9.2. Hepatic and muscle phosphorylase kinase deficiency	0	261750
2.8.9.3. Muscle phosphorylase kinase deficiency	NV	300559
2.8.9.4. Cardiac muscle phosphorylase kinase deficiency	D,	261740
2.8.10. Glycogen storage disease type X	r	
2.8.11. Glycogen storage disease type XI		227810
2.8.12. Glycogen storage disease type XIV		
2.8.13. Glycogen storage disease type XV		
2.8.14. Glycogen storage disease type 0a		240600
2.8.15. Glycogen storage disease type 0b		611556
2.8.16. Other glycogen storage disease		
2.8.16.1. Muscle LDH deficiency		612933
2.8.16.2. Aldolase A deficiency		611881
2.8.16.3. Beta-enolase deficiency		612932
2.8.16.4. Muscle phosphoglycerate kinase deficiency		300653
2.8.17. Unspecified glycogen storage disease		
2.9. Other carbohydrate disorders		
2.9.1. Lactose intolerance		223000
2.9.2. Disaccharide intolerance 1		222900
2.9.3. Trehalase deficiency		612119
3. Disorders of fatty acid and ketone body metabolism		
3.1. Disorders of lipolysis		
3.2. Disorders of carnitine transport and the carnitine cycle		
3.2.1. Carnitine transporter deficiency	E713	212140
3.2.2. Carnitine palmitoyltransferase I (CPTI) deficiency	E713	255120
3.2.3. Carnitine acylcarnitine translocase deficiency	E713	212138
3.2.4. Carnitine palmitoyltransferase II (CPTII) deficiency	E713	255110
3.3. Disorders of mitochondrial fatty acid oxidation		
3.3.1. Very long - chain acyl CoA dehydrogenase deficiency	E713	201475
3.3.2. Mitochondrial trifunctional protein deficiency	E713	143450
3.3.2.1. Isolated deficiency of long-chain 3-hydroxyacyl-	E740	140450
CoA dehydrogenase 3.3.2.2. Isolated deficiency of long-chain 3-ketoacyl CoA thiolase	E713 E713	143450 143450
16	NHS Engla	

3.3.3. Medium - chain acyl CoA dehydrogenase deficiency	E713	201450
Disease group / disease	ICD10	OMIM
3.3.4. Short - chain acyl CoA dehydrogenase deficiency	E713	201470
3.3.5. 3-alpha-hydroxyacyl- CoA dehydrogenase deficiency	E713	231530
3.3.6. Multiple acyl-CoA dehydrogenase deficiency	E713	231680
3.3.6.1. Electron transfer flavoprotein deficiency, alpha chain	E713	231680
3.3.6.2. Electron transfer flavoprotein deficiency, beta		231000
chain	E713	130410
3.3.6.3. ETF-ubiquinone oxidoreductase deficiency	E713	231675
3.4. Disorders of ketone body metabolism	.0	2
3.4.1. 3-Hydroxy-3-Methylglutaryl-CoA synthase deficieny3.4.2. Succinyl-CoA:3-Oxoacid-CoA transferase (SCOT)	AV.	600234
deficiency	E798	245050
3.4.3. Cytosolic acetoacetyl-CoA thiolase deficiency	E712	100678
3.5. Other disorders of fatty acid and ketone body metabolism		
3.5.1. Long - chain acyl CoA dehydrogenase deficiency	E713	201460
3.5.2. Malonyl CoA decarboxylase deficiency	E798	248360
4. Disorders of energy metabolism		
4.1. Disorders of pyruvate metabolism		
4.1.1. Pyruvate dehydrogenase complex deficiency		
4.1.1.1. Pyruvate dehydrogenase E1α subunit deficiency		312170
4.1.1.2. Pyruvate dehydrogenase E1β subunit deficiency		179060
4.1.1.3. Dihydrolipoyl transacetylase deficiency		245348
4.1.1.4. Dihydrolipoyl dehydrogenase deficiency		248600
4.1.1.5. Pyruvate dehydrogenase E3 binding protein deficiency		245349
4.1.1.6. Pyruvate dehydrogenase phosphatase deficiency		608782
4.1.1.7. Pyruvate dehydrogenase deficiency, unspecified		312170
4.1.2. Pyruvate kinase deficiency	1	266200
4.2. Disorders of the citric acid cycle	1	
4.2.1. 2-Oxoglutarate dehydrogenase deficiency	1	203740
4.2.2. Fumarase deficiency	1	136850
4.3. Mitochondrial respiratory chain disorders	+	
4.3.1. Respiratory chain disorders caused by mutations of mtDNA	1	
4.3.1.1. Large-scale single deletion of mtDNA	+	
4.3.1.1.1. Pearson Syndrome	+	557000
