# Never Events

Never Events are serious, largely preventable patient safety incidents that should not occur if healthcare providers have implemented existing national guidance or safety recommendations. The [Never Events policy and framework – revised January 2018](#) suggests that Never Events may highlight potential weaknesses in how an organisation manages fundamental safety processes. Never Events are different from other serious incidents as the overriding principle of having the Never Events list is that even a single Never Event acts as a red flag that an organisation's systems for implementing existing safety advice/alerts may not be robust.

The concept of Never Events is not about apportioning blame to organisations when these incidents occur but rather to learn from what happened. This is why, following consultation, in the revised [Never Events policy and framework – published January 2018](#) we removed the option for commissioners to impose financial sanctions when Never Events were reported. The foreword to the framework states: “.....allowing commissioners to impose financial sanctions following Never Events reinforced the perception of a ‘blame culture’. Our removal of financial sanctions should not be interpreted as a weakening of effort to prevent Never Events. It is about emphasising the importance of learning from their occurrence, not blaming.” Identifying and addressing the reasons behind this can potentially improve safety in ways that extend far beyond the department where the Never Event occurred, or the type of procedure involved.

We have systematically reviewed the barriers for each type of Never Event to identify if they are truly strong and systemic, starting with those that occur most frequently. As a result, we are carrying out a widespread consultation on the future of the Never Events framework and list which means direct comparison of the number of Never Events with earlier periods is not appropriate. The definitions and designated list of Never Events were also revised from February 2018. You can find out more about these changes on the [Revised Never Events policy and framework webpage](#).

The revised 2018 Never Events Policy and Framework requires commissioners and providers to agree and report Never Events via StEIS. Where a Serious Incident is logged as a Never Event but does not appear to fit any definition on the [Never Events list 2018 \(published 28 February 2018\)](#) commissioners are asked to discuss this with the provider organisation and either add extra detail to StEIS to confirm it is a Never Event or remove its Never Event designation from the StEIS system.

## Never Events framework consultation 2024

In February 2024, NHS England launched a [consultation](#) seeking views on whether the existing Never Events Framework remains an effective mechanism to support patient safety improvement.

Never Events are defined as patient safety events that are ‘wholly preventable’ because of the existence of strong systemic protective barriers at a national level. However, reports from [the CQC](#) and [HSIB](#) highlighted for several types of Never Events the barriers are not strong enough and called for the framework to be reviewed.

Find out more on the [consultation webpage](#) and share your views via the [online survey](#). Closing date is 5 May 2024.

## Supporting healthcare providers to prevent Never Events

The Care Quality Commission has undertaken a thematic review in collaboration with NHS Improvement to get a better understanding of what can be done to prevent the occurrence of Never Events, with the resulting report ‘[Opening the door to change](#)’ published in December 2018.

The report includes a recommendation that “NHS Improvement should review the Never Events framework and work with professional regulators and royal colleges to take account of the difference in the strength of different kinds of barrier to errors (such as distinguishing between those that should be prevented by human interactions and behaviours such as using checklists, counts and sign-in processes; and those that could be designed out entirely such as through the removal of equipment or fitting/using physical barriers to risks). As mentioned above, we are in the process of conducting this review, and details of any resulting changes to the Never Events list can be found on the [Revised Never Events policy and framework webpage](#).

The report also suggested that organisations did not always have strong systems for implementing alerts. Key problems included organisations circulating alerts to raise awareness rather than taking the required actions to address an issue; responsibility taken at a junior level for recording an organisation’s completion of the actions; and instead of central coordination across an organisation, individual teams being asked to implement the required actions locally, leading to duplication and the most effective systemic actions left incomplete.

To help address these issues, a new [National Patient Safety Alerting Committee \(NaPSAC\)](#) has been established, whose role includes the development and governance of the new National Patient Safety Alerts. These alerts require healthcare providers to

introduce new systems for planning and coordinating the required actions, including executive oversight.

In September 2015, the first set of National Safety Standards for Invasive Procedures (NatSSIPs) were published by NHS England to help prevent Never Events, with all relevant NHS organisations in England instructed to develop and implement their own local standards based on the national principles. The standards set out broad principles of safe practice and advise healthcare professionals on how they can implement best practice. The Centre for Perioperative Care published [revised National Safety Standards for Invasive Procedures \(NatSSIPs 2\)](#) in January 2023.

The national patient safety team and our partners also continue to work to further prevent individual types of Never Events. Examples include our 2021 [Alert](#) *Eliminating the risk of inadvertent connection to medical air via a flowmeter*; our 2016 [Alert](#) *Nasogastric tube misplacement: continuing risk of death and severe harm* and [resource set](#); and the May 2020 [aide-memoire](#) produced by professional bodies for nutrition, anaesthetics and intensive care to help prevent nasogastric tube Never Events, including special considerations for COVID-19 patients.

As set out in the [NHS Patient Safety Strategy](#), patient safety research and innovation also has an important role to play. We are continuing to work with partners including the Patient Safety Translational Research Centres, Academic Health Science Networks and other researchers, in conjunction with the National Institute for Health Research and the Department of Health and Social Care, to develop new technical solutions to Never Events.

## Investigating and learning from Never Events

NHS providers are encouraged to learn from mistakes and any organisation that reports a Never Event is expected to conduct its own investigation so it can learn and take action on the underlying causes.

The fact that more and more NHS staff take the time to report incidents is good evidence that this learning is happening locally. We continue to encourage NHS staff to report Never Events and Serious Incidents to StEIS and all patient safety incidents to the NRLS and LFPSE, to help us identify any risks so that necessary action can be taken.

## Important notes on the provisional nature of this data

To support learning from Never Events we are committed to publishing this data as early as possible. However, because reports of apparent Never Events are submitted by healthcare providers as soon as possible, often before local investigation is complete, all data is provisional and subject to change.

Because of the complex combination of incidents identified as Never Events when first reported, Serious Incidents designated as Never Events at a later date, and incidents initially reported as Never Events that on investigation are found not to meet the criteria, our monthly provisional Never Event reports provide cumulative totals for the current financial year. This is to ensure the information provided is as consistent and as accurate as possible.

This provisional report is drawn from the StEIS system and includes all Serious Incidents with a reported incident date between 1 April and 31 December 2023, and which on the 24 January 2024 were designated by their reporters as Never Events.

Data on [Never Events for 2022/23 and previous years](#) can be found on the NHS England website. Once sufficient time has elapsed after the end of the 2023/24 reporting year for local incident investigation and national analysis of data, we will produce a final whole-year report of Never Events, which will replace this provisional data.

# Summary

When data for this report was extracted on 24 January 2024, 286 Serious Incidents on the StEIS system were designated by their reporters as Never Events and had a reported incident date between 1 April and 31 December 2023. Of these 286 incidents:

- 268 Serious Incidents appeared to meet the definition of a Never Event in the [Never Events list 2018 \(published 28 February 2018\)](#) and had an incident date between 1 April and 31 December 2023; this number is subject to change as local investigations are completed
- 18 Serious Incidents did not appear to meet the definition of a Never Event and had an incident date between 1 April and 31 December 2023.

More detail is provided in the tables on the following pages.

**Table 1: Never Events 01 April – 31 December 2023 by month of incident\***

Month in which Never Event occurred	Number
April	33
May	29
June	32
July	33
August	39
September	24
October	29
November	31
December	18
<b>Total</b>	<b>268</b>

Note: As described above, a further 18 Serious Incidents did not appear to meet the definition of a Never Event and the relevant organisations have been asked to review accordingly.

\*Numbers are subject to change as local investigations are completed.

**Table 2: Never Events 01 April – 1 December 2023 by type of incident with additional detail\***

Type and brief description of Never Event	Number
<b>Wrong site surgery</b>	<b>139</b>
Biopsy of wrong organ/structure	6
Incision to wrong organ/structure	4
Injection to wrong organ/structure	20
Procedure intended for another patient	4
Removal of organ/structure when surgical plan was to conserve it	2
Wrong procedure	9
Wrong side/site procedure	24
Wrong site block	31
Wrong skin lesion biopsy/removed	39
<b>Retained foreign object post procedure</b>	<b>50</b>
Guide wire	12
Mouth prop	1
Surgical instrument/part of surgical instrument	7
Surgical needle	3
Surgical swab	11
Throat pack	2
Vaginal swab	14
<b>Wrong implant/prosthesis</b>	<b>25</b>
Central line	1
Corneal graft	1
Dental implant	1
Hip	7
Incorrect screw cap for femoral nail	1
Intrauterine contraceptive device	1
Knee	6
Lens	5
Screws	1
Stent	1
<b>Misplaced naso or oro gastric tubes</b>	<b>18</b>
Apparently misleading pH test result	4
Placement checks not described or not clearly described	9
X-ray misinterpretation; no indication 'four criteria' used	5
<b>Administration of medication by the wrong route</b>	<b>13</b>
Nasal drops given intravenously	1
Oral medication given intravenously	11
Oral medication given subcutaneously	1

Type and brief description of Never Event	Number
<b>Transfusion or transplantation of ABO-incompatible blood components or organs</b>	<b>9</b>
Kidney with wrong blood type transplanted	1
Wrong blood transfused	8
<b>Overdose of insulin due to abbreviations or incorrect device</b>	<b>5</b>
Insulin drawn up from an insulin pen	1
Use of abbreviations	2
Wrong syringe	2
<b>Unintentional connection of a patient requiring oxygen to an air flowmeter</b>	<b>3</b>
Patient connected to air rather than oxygen	3
<b>Overdose of methotrexate for non-cancer treatment</b>	<b>2</b>
Methotrexate prescribed and administered more than the intended weekly dose	2
<b>Scalding of patients</b>	<b>1</b>
Bowl of water for washing at the bedside from kettle	1
<b>Mis-selection of a strong potassium solution</b>	<b>1</b>
Wrong strength potassium	1
<b>Falls from poorly restricted windows</b>	<b>1</b>
Window restrictor failed	1
<b>Failure to install functional collapsible shower or curtain rails</b>	<b>1</b>
Curtain rail failed to collapse	1
<b>Total</b>	<b>268</b>

Note: As described above, a further 18 Serious Incidents did not appear to meet the definition of a Never Event and the relevant organisations have been asked to review accordingly.

\*Numbers are subject to change as local investigations are completed.
