Executive Summary

1 Introduction

- 1.1 The NHS Standard Contract is published by NHS England, and its use is mandated for use by Integrated Care Boards (ICBs) and NHS England for all their clinical services contracts, with the exception of those for primary care services.
- 1.2 The Contract continues to be published in both full-length and shorter-form versions. This Guidance document is relevant to both forms of the Contract, and guidance on when the shorter-form version should be used is set out in paragraph 9 below.

2 The 2024/25 Contract

- 2.1 The updated Contract is intended to set national terms and conditions applicable for the 2024/25 financial year. As always, if urgent issues arise during 2024/25 which require any amendment to the Contract, NHS England will consult on material changes and publish revised terms and conditions.
- 2.2 Written, signed contracts must be put in place, for the full 2024/25 financial year, between commissioners and <u>all</u> providers (that is, with both Trusts <u>and</u> non-NHS providers). Every effort must be made to agree and sign contracts by no later than 31 March 2024.
- 2.3 Commissioners should collaborate with each other in their contractual arrangements with providers, with multiple commissioners often signing the same single contract with a large provider. A model Collaborative Commissioning Agreement is available on the <u>NHS Standard Contract webpage</u> to facilitate this.
- 2.4 In most instances, commissioners and providers will be signing new contracts for 2024/25. Where that is the case, the updated 2024/25 version of the Contract must be used in its final post-consultation form, as published in due course.
- 2.5 Not all local contracts will expire at 31 March 2024, however. Where an existing contract (awarded prior to that date) continues into 2024/25:
 - the updated General Conditions and Service Conditions, once published online by NHS England in final post-consultation form, <u>will take automatic effect from</u> <u>1 April 2024</u>, without any need for local action; but
 - the commissioner and provider may need to agree a Variation, locally between them, to update aspects of the Particulars (prices and contract values, for instance).

See paragraph 22 below for further detail.

2.6 Note the following points relating to provider selection and delegation.

- The NHS Provider Selection Regime (PSR). Draft guidance on the new PSR has now been published, and it is intended that PSR will subject to approval by Parliament of the <u>Health Care Services (Provider Selection Regime)</u> <u>Regulations 2023</u> – come into effect on 1 January 2024. See paragraph 15 below – and, for full details, the <u>detailed draft guidance and FAQs on PSR</u>.
- Delegation. NHS England plans to delegate functions relating to the commissioning of some specialised services to some ICBs from 1 April 2024. Specialised services contracts for 2024/25, including those "to be delegated", will be awarded at the outset by NHS England in its name, rather than by ICBs. This may be done under stand-alone contracts to which NHS England is the only commissioning party or under joint contracts with ICBs. Once delegation is confirmed, through signature of a delegation agreement on or after 1 April 2024, the standard approach will be that NHS England will then assign the commissioning responsibilities in respect of the services in respect of which relevant functions have been delegated to each affected ICB. (By contrast, all ICBs have already taken on delegated commissioning of secondary and community dental services during 2022/23 and 2023/24, so will now be in a position to award contracts including those services in their own name for 1 April 2024 onwards.)
- 2.7 The material changes proposed to the Contract for 2024/25 are described in section 3 below.

3 Changes to Contract content for 2024/25

3.1 Material changes proposed to the Contract for 2024/25 (whether to the full-length version, the shorter-form version or both) are set out below.

Core requirements to safeguard quality of care

3.2 This section sets out proposed changes to ensure that the Contract continues to include all of the core national expectations necessary to safeguard quality of care.

Торіс	Change	New Contract Reference
Care Quality Commission (CQC) "quality statements"	The <u>Fundamental Standards of Care regulations</u> set out core requirements for all providers, and the Contract already requires services to be provided in accordance with them. But the CQC has now published additional " <u>quality</u> <u>statements</u> " in support of the regulations. The quality statements show in more detail what is needed to deliver high quality care in each of the areas covered by the regulations. We propose to add a specific requirement for all providers to have regard to these quality statements.	Service Condition 1.1-2 (FL) and 1.2 (SF) and Definitions
Fit and Proper Person Test for board members of NHS bodies	NHSE has recently published a <u>Fit and Proper Person Test</u> <u>Framework</u> (FPPT) for board members of NHS organisations. The Framework is designed to assess the appropriateness of an individual to effectively discharge their duties in the capacity of a board member. It takes into account the requirements of the Fundamental Standards of Care	Service Condition 1.4-5 (FL only) and Definitions

	regulations, and of the CQC, in relation to directors being fit and proper persons to perform their roles. We propose to include requirements on providers which are Trusts to comply with the FPPT.	
Supervision of the management of services by non-NHS providers	At the same time, mirroring the existing provision in the full- length Contract, we propose to add a requirement to the shorter-form version, under which the identity of the provider's "nominated individual" must be recorded in the Particulars. The nominated individual is the person responsible for supervising the management of the provider's services, as provided for in regulation 6.	Service Condition 1.4 (FL and SF) Particulars
NHS Complaint Standards	The Contract already requires providers to have in place a proper policy for the management of complaints. The Parliamentary and Health Service Ombudsman has recently published <u>NHS complaint standards</u> . These set out a model complaint handling procedure and guidance describing how organisations providing NHS services should approach complaint handling. We propose to amend the Contract wording to require that each provider's complaints procedure must comply with the Ombudsman's standards.	Service Condition 16.1 (FL and SF) and Definitions

National access and waiting times standards

- 3.3 Although the 2024/25 Priorities and Operational Planning Guidance (the Planning Guidance) has now been published, revised national expectations for key access and waiting times standards in 2024/25 have not yet been made available.
- 3.4 National access and waiting times standards are set out in Annex A of the Service Conditions. Our usual practice is to update Annex A to reflect any specific changes to these standards as set out in the Planning Guidance thus ensuring that the contractual requirements on providers each year are consistent with what the Planning Guidance is saying.
- 3.5 NHSE will publish updated expectations on key access standards for 2024/25 in the New Year, and once published we will reflect them appropriately in the <u>final</u> published version of the Contract.
- 3.6 For this <u>draft</u> version of the Contract, therefore, the only material changes we have proposed to the access standards in Annex A relate to the changes to cancer standards <u>announced in August 2023</u>, reducing the number of standards from ten to three, as set out below.

Торіс	Change	New Contract Reference
Cancer waiting times	Changes to national cancer waiting times standards, with effect from 1 October 2023, have been <u>announced</u> , and we now propose to amend the Contract accordingly. For 2024/25, the Contract will therefore include only:	Service Conditions Annex A (FL only)
	 the 28-day Faster Diagnosis Standard; a single headline 31-day decision-to-treat to treatment standard; and a single headline 62-day referral to treatment standard. 	

Service provision – new additions to reflect national priorities

3.7 This section sets out a limited number of new additions to the Contract which are aimed at promoting improvements in how services are delivered for patients, in line with the latest national policy direction.

Торіс	Change	New Contract Reference
Diagnostic imaging reporting turnaround times	NHS England has recently published <u>guidance on</u> <u>diagnostic imaging reporting turnaround times</u> . Reporting turnaround time in imaging is the interval between an imaging examination and a verified report being made available to the referring clinician. Keeping turnaround times as short as possible is essential for the timely diagnosis and treatment of patients. The guidance states an overall expectation that no examination should take longer than four weeks to be reported and sets recommended requirements, at a more detailed level, for reporting timescales for different imaging categories and referral categories. We propose to add a new requirement to the Contract for providers of diagnostic imaging services to have regard to the guidance on turnaround times. Collaborative working between providers, through imaging networks, will be vital in delivering recommended turnaround times.	Service Condition 3.19 (FL) and 3.5 (SF) and Definitions
Patient and Carer Race Equality Framework	The <u>Patient and Carer Race Equality Framework</u> has now been published. It describes steps which providers of mental health services should take to improve the experience of care for racialised and ethnically and culturally diverse communities. We propose to include a new requirement in the Contract for providers of mental health services to implement the requirements of the Framework.	Service Condition 13.11 (FL only) and Definitions

Service provision – areas where updated Contract wording is needed

3.8 This section sets out changes which we propose to update existing Contract requirements in order to keep the Contract consistent with published national standards and policies.

Торіс	Change	New Contract Reference
Maternity and neonatal services	The current Contract requires providers of maternity and neonatal services to comply with the <u>Saving Babies' Lives</u> <u>Care Bundle</u> and the <u>Perinatal Quality Surveillance Model</u> ; to have regard to <u>NICE guideline NG4 (<i>Safe midwifery</i> <i>staffing for maternity settings</i>); and to implement the requirements of the <u>Ockenden Review</u> and the <u>Independent</u> <u>Investigation into East Kent Maternity Services</u>. All of these expectations are now built into the <u>Three year</u> <u>delivery plan for maternity and neonatal services</u>, published</u>	Service Condition 3.11 (FL only) and Definitions

		,
	earlier this year. We therefore propose to replace the existing Contract wording with an overarching requirement on providers to implement in a timely manner the actions for providers set out in the delivery plan.	
Fit notes	The Contract includes a provision requiring providers to issue fit notes to patients where needed. Changes under the Health and Care Act 2022 now allow fit notes to be issued to patients by doctors, nurses, physiotherapists, pharmacists and occupational therapists, rather than only by doctors. Government <u>Fit Note Guidance</u> has been updated accordingly. There is also a new requirement, under <u>DAPB4011</u> : <u>eMED3 (fit notes) in Secondary Care</u> , for fit notes to be issued to patients electronically as the default. We propose to update the Contract wording accordingly, removing the existing references to medical staff as the only relevant staff group and expanding the Contract definition of Fit Note Guidance to include DAPB4011. Fit note training for staff is available via <u>elearning for healthcare</u> .	Service Condition 11.12 and Definitions (FL only)
Antibiotic usage	The Contract has for some years included a provision requiring Trusts to use all reasonable endeavours to reduce their broad-spectrum (UK Watch and Reserve category) antibiotic usage by a specific percentage each year, in accordance with the overall target reduction set out in the UK five-year action plan for antimicrobial resistance 2019 to 2024. This existing five-year plan is now coming to an end, and the Contract provisions need to be revised. A new national action plan is expected to be published early in 2024 and is likely to continue to focus on reducing use of broad-spectrum antibiotics. For 2024/25, given that the detailed requirements of the new national action plan have not yet been confirmed, we therefore propose to amend the Contract wording to require each Trust to use all reasonable endeavours, consistent with good practice, to minimise its broad-spectrum antibiotic usage, in accordance with the requirements of the new national action plan when published. We will then consider re-introducing specific percentage targets for annual reductions into the Contract for 2025/26 onwards.	Service Condition 21.3 and Definitions (FL only)
Emergency Preparedness, Resilience and Response (EPRR)	 Recognising the status of ICBs as category 1 responders under the Civil Contingencies Act 2004, we propose to update the provisions relating to EPRR in the full-length version of the Contract, so that providers are specifically required to: have in place an Incident Response Plan and provide a copy of this to the commissioner; and have in place a Business Continuity Plan, an Exercising Plan and a Commander Training Plan and provide a copy of these to the commissioner on request. We also propose to strengthen the requirements in the Contract for notification to the commissioner of activation of the provider's Incident Response Plan or Business Continuity Plan, of actual disruption to service and of material risks to imminent disruption of Commissioner Requested Services. 	Service Condition 30.2-7 (FL) and 30.2-4 (SF) General Condition 28.1 (FL and SF) and Definitions

We have added wording to make it clear that the EPRR requirements operate in parallel with the Force Majeure regime (General Condition 28), and neither qualifies the other.	
(The shorter-form version of the Contract will continue to contain lighter-touch EPRR provisions.)	

Patient safety

3.9 This section sets out proposed updates relating to patient safety issues.

Торіс	Change	New Contract Reference
Patient Safety Incident Response Framework	The current Contract wording requires commissioner and provider to agree a local implementation date, during 2023/24, for the <u>Patient Safety Incident Response Framework</u> (PSIRF). By 1 April 2024, PSIRF should have been adopted by all providers, so we propose to delete the reference to the agreement of an implementation date – and to the NHS Serious Incident Framework, which will no longer apply.	Service Condition 33.2-3 (FL) and 33.2 (SF)
Learn From Patient Safety Events Service	In terms of reporting serious incidents, providers are expected to transition during 2023/24 from using the National Reporting and Learning System to using the <u>Learn From</u> <u>Patient Safety Events Service</u> (LFPSE). We propose to amend the Contract so that the requirement from 1 April 2024 is to report via LFPSE.	Service Condition 33.4 (FL only) and Definitions
Patient Safety Specialists	The Contract requires the provider to designate one or more Patient Safety Specialists. NHSE has recently commissioned an independent evaluation of the implementation of the Patient Safety Specialist role, and this has uncovered some unwarranted variation across providers, meaning that the role of these Specialists is not uniformly effective. We propose to strengthen the Contract requirement in response, so that it requires providers to designate Patient Safety Specialists in accordance with NHSE's Identifying Patient Safety Specialists guidance.	Service Condition 33.9 (FL only)

<u>Workforce</u>

3.10 This section sets out proposed updates relating to workforce issues.

Торіс	Change	New Contract Reference
NHS Equality, Diversity, and Inclusion Improvement Plan	 The current Contract requires each Trust to publish a five-year action plan on black, Asian and minority ethnic representation among its senior staff and in its board, reflecting the targets set out in the NHS Model Employer Strategy, and publish regular reports on its progress; and 	Service Condition 13.6 Particulars Schedule 6A

Mandatory staff	 publish separate action plans and progress reports in relation to the <u>Workforce Race Equality Standard</u> (WRES) and the <u>Workforce Disability Equality Standard</u> (WDES). The Trust-level targets set in the Model Employer Strategy are now out of date, and NHS England has now published the <u>NHS Equality, Diversity, and Inclusion Improvement Plan</u> (EDI Plan). The EDI Plan aims to address prejudice and discrimination across the NHS workforce in relation to <u>any</u> of the protected characteristics covered in the Equality Act 2010. The EDI Plan sets out six high-impact actions which NHS organisations must take and contains specific success metrics against which they must monitor their progress, including WRES and WDES indicators. Up-to-date data on each metric for every Trust is automatically included in the <u>Model Health System</u>, allowing benchmarking of performance. In this context, we propose to merge the three current separate Contract provisions (Model Employer Strategy, WRES, WDES) into one single updated requirement, under which Trusts must implement the high-impact actions set out in the EDI Plan and measure their progress against the success metrics set out in the EDI Plan, WRES and WDES. 	Definitions (FL only)
training on learning disability and autism	The Health and Care Act 2022 makes provision for mandatory training on learning disability and autism for all staff. The Department of Health and Social Care has recently completed a consultation on a <u>draft code of practice</u> to govern the provision of such training and is expected to publish the final version shortly. The CQC has also updated <u>its guidance for providers</u> in this area. We therefore propose to add a requirement to the Contract for providers to ensure that all staff receive training on learning disability and autism appropriate to their role, in accordance with the code of practice when published in final form and having regard to DHSC's, CQC's and NHSE's recommendation of the <u>Oliver McGowan</u> <u>Mandatory Training on Learning Disability and Autism</u> as the "preferred and recommended" training package.	General Condition 5.5 (FL) and 5.4 (SF) and Definitions
NHS Long Term Workforce Plan	General Condition 5.7 already sets out a requirement on each provider to work with NHSE and with local system partners in the development and delivery of healthcare workforce plans and in the planning and provision of education and training for healthcare workers. We propose to update this provision so that it makes specific reference to providers supporting implementation of the <u>NHS Long Term Workforce Plan</u> published this summer.	General Condition 5.7 (FL) and 5.5 (SF)

Procurement of products and services

3.11 This section sets out proposed amendments aimed at improving the value delivered through procurement and purchasing of products and services by Trusts.

Торіс	Change	New Contract Reference
Procurement frameworks for goods and services	We updated the Contract for 2023/24 to include new requirements for Trusts to purchase medicines under frameworks put in place at national level by NHSE. NHSE has now published a new <u>Strategic Framework for NHS</u> <u>Commercial</u> , one element of which is intended to optimise the use by NHS bodies of framework agreements more generally. The aim is to harness NHS purchasing power on a national footprint; if all NHS organisations utilise accredited frameworks where available, this will drive better value for public money across the NHS as a whole. Detailed guidance, to be published shortly in support of the <i>Strategic framework for NHS Commercial</i> , will set out a new process, led by NHSE, for accrediting NHS organisations which will be able to act as "hosts" for frameworks and for accrediting individual frameworks under which specific products and services can be purchased. This guidance will make clear the timetable for confirmation of the first accredited hosts and accredited frameworks. The coverage of accredited frameworks will expand over time, and all the frameworks will be accessible via the NHSE website. The expectation under the guidance will be that, if a Trust is intending to purchase a product or service via a framework (or, if there is not yet an appropriate accredited framework, via an appropriate framework hosted by an accredited host) where such a framework kis available and where the product or service available via the framework is appropriate for the Trust's needs. We therefore propose to update the Contract wording to reflect this new approach. We have proposed amendments to Service Condition 39 to the effect that, where a Trust intends to use a framework to purchase a particular service or product for a purpose which relates to its provision of healthcare service, its premises or business, and where that service or product framework (which is defined in the Contract to include, if there is not yet an appropriate accredited framework, an appropriate framework (which is defined in the Contract to in	Service Condition 39.2 (FL only) and Definitions
Nationally Contracted Products Programme / NHS Core List	commitment to buy the relevant product or service. The Contract has for some years contained a requirement for Trusts to implement the requirements of the Nationally Contracted Products programme. This programme, operated by NHS Supply Chain, has consolidated NHS purchasing power in order to purchase products on a better-value basis for NHS organisations. Under the <u>Strategic framework for NHS</u> <u>Commercial</u> , the list of products available to purchase is now	Service Condition 39.6 and Definitions (FL only)

	being renamed as the <u>NHS Core List</u> , and we propose to update the Contract wording accordingly, amending it to make clear the requirement that, where a product (or a suitable equivalent alternative) is available on the NHS Core List, the Trust must purchase that product / alternative product via NHS Supply Chain.	
Agency rules	 NHSE has published updated "agency rules", which set out requirements for certain Trusts to: assist ICBs to comply with system-level ceilings for total agency expenditure; procure all agency staff at or below the price caps; and only use approved framework agreements to procure all agency staff. We propose to include new wording in the Contract to give effect to the agency rules. The rules must be <u>complied with</u> by: all NHS Trusts; NHS Foundation Trusts receiving interim support from the Department of Health and Social Care; and NHS Foundation Trusts in breach of their licence for financial reasons, 	Service Condition 39.8 and Definitions (FL only)
Duty to explain purchasing decisions	The existing Contract provisions relating to the purchase of medicines include a requirement for accountability – so that any Trust which breaches its contractual duty to use national medicines frameworks must, on request, provide a written statement to its commissioner, to its public board and/or to NHSE, explaining its purchasing decision and what it will do to ensure compliance with the contractual requirement in future. We now propose to broaden this accountability requirement so that it applies across the main areas now covered by Service Condition 39 – including accredited frameworks generally, high-cost devices, the Core List and the agency rules.	Service Condition 39.9 (FL only)

Impact of the new NHS Provider Selection Regime

3.12 This section sets out changes proposed in anticipation of the intended introduction of the new <u>NHS Provider Selection Regime</u> (PSR), which will – subject to the passage of the <u>Health Care Services (Provider Selection Regime) Regulations</u> 2023 – take effect on 1 January 2024.

Торіс	Change	New Contract Reference
Permitted Variations	General Condition 13 of the Contract deals with the process for agreeing variations, but has not in the past referred directly to the restrictions which procurement law places on the extent of variations to contracts during their term. With the introduction of the PSR, applicable specifically to healthcare services, we believe it is timely to draw attention to the restrictions on variations under the PSR. We have proposed an addition to General Condition 13 to that effect by including a reference to regulations 13 and 14 of the 2023 PSR Regulations.	General Condition 13.1 (FL and SF)

Tomeiroti	Regulations 13 and 14 describe criteria for permissible variations (referred to as "modifications" in the regulations), including in relation to changes in scope and value of the contract and to changes which need to be made as a matter of urgency. Note that regulations 13 and 14 will apply to all contracts for healthcare services, whether awarded before or after the PSR comes into effect.	
Termination	The Contract allows for termination by the commissioner in certain specific circumstances envisaged under regulation 73(1)(b) of the Public Contracts Regulations 2015 or "any equivalent provisions under the Procurement Act or the NHS Provider Selection Regime". In anticipation of PSR coming into effect, we propose to update this to refer specifically and solely to the relevant section of the 2023 PSR Regulations, regulation 22(1)(b).	General Condition 17.8 and 17.10.18 (FL) and 17.3 and 17.5.8 (SF)
Recording of route through which contract was awarded	 We propose to add a section in the Particulars in which the commissioner must record whether the specific contract was: awarded under the Public Contract Regulations; awarded under one of the different provider selection processes envisaged in the PSR; or called off under a specific framework compliant with regulation 18 of the PSR (such as the <u>Increasing Capacity Framework</u>). We propose this for two reasons. As a general principle, as the NHS transitions from awarding healthcare contracts under the Public Contracts Regulations to doing so under PSR, it will be vital for commissioners to be clear under which process a particular contract has been awarded. The requirements of each regime are different, and the commissioner can of course be challenged for noncompliance. More specifically, being clear about which process has been used will have a direct bearing on the operation of General Condition 13 (Variations). The 2023 PSR Regulations allow (through regulations 13-14 described above) a broader range of "modifications" where the contract has been awarded under PSR direct award process A or B than where the contract has been awarded under PSR processes). Note that there can only be one process for the award of a single contract, so the chosen process for award must be the same for all commissioners which are party to the contract in 	Particulars page 2 (FL and SF)
Extension of contract term	question. The new PSR will govern all changes to healthcare contracts, including extensions to their duration, from 1 January 2024. We have updated the template wording at Schedule 1C of the NHS Standard Contract to give slightly greater flexibility than hitherto allowed under the Contract for the extension of a contract's term, in keeping with the PSR. The Contract wording currently places strict limits on extensions: a contract may be extended at the commissioners' option in accordance with the pre-agreed terms only once. We propose to change this to allow for multiple extensions (if the parties so wish). We also propose to point out the possibility of an extension being effected in combination with other changes to the contract in question, in	Particulars Schedule 1C (FL and SF)

accordance with the variations process under GC13. Our Contract Technical Guidance gives further guidance on extensions – see paragraph 19.	
---	--

Patient choice of provider

3.13 This section sets out changes to the arrangements set out in the Contract to support patients' legal right to choose their provider.

Торіс	Change	New Contract Reference
Patient choice legislation and guidance	 The right for patients to choose their healthcare provider is currently enabled through two sets of regulations – the Procurement, Patient Choice and Competition regulations and the Standing Rules regulations. <u>Amendments currently before Parliament</u> and due to take effect on 1 January 2024 will simplify the position, so that a unified patient choice regime is set out in revised Standing Rules regulations. In this context, we propose to strengthen the provisions of the Contract to require compliance with "Patient Choice Legislation and Guidance", defined to include: the revised Standing Rules regulations once approved; the <u>NHS Choice Framework</u>; and <u>further guidance</u> now published by NHSE in support of the updated Standing Rules. 	Service Condition 6.1, 6.10, 6.13-14, 29.2, 29.19 (FL) Service Condition 6.1-3 (SF) and Definitions
Acceptance of referrals	Service Condition 6.8 of the full-length version of the Contract requires a provider to accept all referrals which are giving effect to a patient's legal right to choose their provider, even where these referrals are for patients whose responsible commissioner is not a party to the contract with the provider. This provision is an essential underpinning for the operation of patient choice on a "non-contract activity basis". For reasons of brevity, the same requirement has never been included in the shorter-form version of the Contract. However, the shorter-form version can be used for community-based mental health services, to which the legal right of choice applies – and omission of the requirement risks undermining patients' rights to choose any mental health services provider which holds a contract with an ICB. We therefore propose to include the same requirement – to accept all "choice" referrals, regardless of commissioner – in the shorter-form version of the Contract, where it will form Service Condition 6.2.	Service Condition 6.2 (SF only)
Variations for new "choice" services / locations	General Condition 13 makes provision for a local contract to be varied – and the default position is that variations can only proceed where they are mutually agreed between commissioner and provider. The proposed amendments to the Standing Rules regulations described above will describe the circumstances in which and the process by which a provider of services to which patients' rights of choice apply may ask a commissioner to assess it for the award of a contract – or for its existing contract to be "modified" (i.e. varied) – to allow it to deliver new "choice" services, or to deliver "choice" services which it already delivers from a new location or subject to new accessibility requirements.	General Condition 13.2 (FL and SF)

Where the commissioner's assessment criteria are met, the commissioner must award the provider an appropriate contract or agree an appropriate modification to the existing contract, as the case may be.	
We propose to add a new provision to General Condition 13 to make it clear that a commissioner may not refuse to agree a modification to the provider's contract where doing so would be contrary to these amendments to the 2012 Regulations.	

Contract management processes

3.14 As part of our review of the Contract for 2024/25, we have been considering whether and how we can simplify contract management provisions and minimise transactional and burdensome processes. Detailed proposals are set out below; these in large part reflect the broad findings of the online engagement survey we carried out during the summer, as described above.

Торіс	Change	New Contract Reference
Withholding of funding for Information Breaches	Over time, the Contract has moved away from the concept of "financial sanctions" being applied by commissioners to providers, for instance where the latter fail to achieve national performance standards. In the context of the Health and Care Act 2022, where an ICB and its partner Trusts are working together to achieve system financial balance, small-scale financial sanctions of this kind achieve little. However, the Contract does still make provision for commissioners to withhold funding from providers in specific, limited circumstances, where a provider breach of an important contractual obligation goes unremedied. Withholding is possible under the overall "contract management" provisions in General Condition 9 – or, for breaches of information and reporting requirements specifically, under the "Information Breach" provisions in Service Condition 28. Feedback to our engagement survey indicated that, although commissioners use this ability to withhold rarely, it is something which they value as a tool to deal with really serious situations. The two withholding regimes are slightly different, however, and our proposal for 2024/25 is to simplify matters. We have therefore removed the separate arrangements for Information Breaches from Service Condition 28, with the intention that breaches of information and reporting requirements will in future be handled under the overall General Condition 9 process, which is already used for managing all other unrectified breaches.	Service Condition 28.18-25 (FL only) and Definitions
Activity management	 The Contract contains provisions through which the parties can work together to manage demand for the services and volumes of activity undertaken. We propose to streamline these provisions slightly as follows. We have removed the arrangements for "early warning", by one party to the other, of unexpected or unusual patterns of referrals or activity, because they are very rarely used in practice. 	Service Condition 29.8-9, 29.12, 29.15, 29.17 and Definitions (FL only)

	 We have simplified the wording so that it no longer seeks to distinguish between "activity management" (as being about demand for the services) and "utilisation" (as being about efficient use of the provider's capacity). Instead, the concept of activity management now covers both, and an Activity Management Plan under the Contract can be used both: > as a tool to seek to <u>control</u> activity volumes (via clinically appropriate management of demand, as currently); and > as a tool to seek to deliver a clinically appropriate <u>increase</u> in activity throughput and volume (to assist with elective recovery generally and especially to deal with a situation where an increased number of referrals have been received). Of course, it remains the case that that these activity management provisions must <u>not</u> be used to restrict or impede the operation of patients' legal right to choose their provider. 	
Prior Approval Schemes	 The Contract currently permits a commissioner to put in place a Prior Approval Scheme (PAS), which a provider must follow to seek the commissioner's approval for certain locally defined treatments. Used appropriately, PASs are an important and effective tool through which commissioners can ensure that activity which providers undertake is clinically appropriate and in accordance with local commissioning policies and criteria. Our survey demonstrated that PASs continue to be widely used and that many commissioners regard them as important. But the administration of PASs can also create significant burdens for provider staff, and it is vital that this burden does not outweigh any clinical and financial benefits a PAS may bring. Service Condition 29 already requires commissioners, when implementing new or replacement PASs, to have regard to the burden which these may create for providers. We now propose to strengthen this, so that the requirement: specifically refers to administrative and financial burdens; and applies on an ongoing basis, including where a commissioner is deciding whether to retain or discontinue an existing PAS, as well as to decisions on whether to introduce new PASs. 	Service Condition 29.21 (FL only)
Invoice payment files	Historically, payments to providers under the Contract have been made on the basis of an invoice submitted by the provider to the commissioner. This remains the case for non- NHS providers, but payments from commissioners to Trusts are now made on the basis of a different, less burdensome approach, the "invoice payment file" described further in the <u>Revenue, finance and contracting guidance</u> . We propose to amend the Contract wording on payment to allow for this "invoice payment file" approach for Trusts.	Service Condition 36.13, 36.22 and 36.31 (FL) and 36.10, 36.15, 36.23 (SF) and Definitions
Audit	The full-length Contract sets out provisions under which the commissioner can arrange for an independent audit of aspects of the provider's performance and reporting and charging	General Condition 15.8-13

practice. The provisions are lengthy, describing quite complex arrangements for how the financial implications of audit findings are to be managed. We propose to amend the arrangements in the full-length Contract so that they match the much simpler and less transactional formulation in the shorter- form Contract.	(FL only)
---	-----------

4 Advice and support

Queries and updates

- 4.1 The NHS Standard Contract Team provides a helpdesk service for email queries. Please contact <u>england.contractshelp@nhs.net</u> if you have questions about this Guidance or the operation of the NHS Standard Contract in general.
- 4.2 If you would like to be added to our stakeholder list to receive updates on the NHS Standard Contract, please email your contact details to england.contractsengagement@nhs.net.

Model grant agreement and model sub-contract

- 4.3 NHS England has also developed a model grant agreement as a funding vehicle for voluntary bodies, for commissioners to use where a commissioning contract may not be appropriate. The model agreement and associated guidance are available at on the <u>NHS Grant agreement web page</u>. See also paragraph 11 below.
- 4.4 Model sub-contracts suitable for use with the full-length Contract and with the shorter-form Contract will be published on the <u>NHS Standard Contract 2024/25</u> webpage in due course. See also paragraph 38 below.

Model System Collaboration and Financial Management Agreement

- 4.5 For some years, we have published a model System Collaboration and Financial Management Agreement (SCFMA). This is a framework document which an ICB and its local partner Trusts can choose to use locally, to set out how they will work together to manage NHS system finances and in-year financial risks.
- 4.6 We recognise that alternative governance arrangements will often now have been put in place at local level (ICB sub-committees, for example, or joint committees with Trusts) through which the aspirations set out in the model SCFMA can be delivered. Use of the SCFMA is therefore not mandatory, but we are continuing to publish it, on the <u>NHS Standard Contract 2024/25 webpage</u>, for use where local systems wish to adopt it, or to draw on it for their own locally-developed arrangements.

Section A General guidance on contracting

5 Terminology

- 5.1 Throughout this guidance, we continue to use the generic term "the NHS Standard Contract" or "the Contract" to refer collectively to both the full-length and shorter-form versions. Where there are material differences in approach between the two versions of the Contract, we identify these below.
- 5.2 Obligations under the Contract are expressed in different ways. We are sometimes asked to explain what expressions such as "use reasonable endeavours to" or "have regard to" mean, in practical terms. We have set out a brief guide to the commonly used terms below.

If the Contract says that the relevant party *must* do something (for example, "must comply", "must submit", "must implement"), it means that that party has an absolute obligation to do that something, regardless of the cost or inconvenience to them it entails – no excuses (but see below).

But many obligations are expressed in other ways. As a general rule of thumb:

If the Contract says that the relevant party *must use all reasonable endeavours* to do something, it means that that party must pursue every reasonable course of action open to it to achieve the required objective. It can't simply try one course of action and, if that doesn't work, give up. But it isn't an absolute obligation: it doesn't mean that the relevant party has to spend unlimited or disproportionate sums of money or other resources in pursuing the relevant objective, but rather what is reasonable in the circumstances.

If the Contract says that the relevant party **must use reasonable endeavours** to do something, that's a slightly lesser obligation. It means that that party must pursue a reasonable course of action open to it to achieve the required objective, but it doesn't necessarily have to pursue lots of different courses of action. Again, it isn't an absolute obligation: it doesn't mean that the relevant party has to spend unlimited or disproportionate sums of money or other resources in pursuing the relevant objective, but rather what is reasonable in the circumstances.

If the Contract says that a party *must have regard to* something (usually Guidance) it means that the party must make sure that it is aware of what that Guidance says and takes account of it in its decisions and actions. The party should assume that it would need to have a good reason to justify departing from that Guidance.

Note that, however the obligation is expressed, a party may be entitled to relief from liability under the Contract for any failure to comply with it, if that failure is caused by matters beyond the reasonable control of that party: see GC28 and the definition of Event of Force Majeure.

6 Content of this section

- 6.1 This section of the Technical Guidance offers broad advice about general contracting issues.
 - Paragraphs 7-14 deal with the NHS Standard Contract itself when it should be used, its legal status, the elements which are for local completion, who can be party to it, and the distinction between the full-length and shorter-form versions. They also address collaborative contracting arrangements and alternatives to contracts such as grant agreements.
 - Paragraphs 15-20 cover provider selection and the award of contracts. They describe the communications which will be needed in advance of contract expiry and explain what is possible in terms of contract duration and extension.
 - Paragraphs 21-25 deal with contract signature, set out what happens when a contract is not signed and describe the arrangements for dispute resolution and "non-contract activity".
 - Paragraphs 26-29 describe potential models for contracting for integrated services and for personalised care and offer brief advice on using the Contract to operate call-off arrangements under frameworks. They provide links to national helpdesks which can offer advice on contract-related issues.
- 6.2 We have provided, at Appendix 3, some example scenarios illustrating which form of contract, sub-contract or other agreement should be used in different situations.

7 When should the NHS Standard Contract be used?

- 7.1 The NHS Standard Contract exists in order that commissioners and providers operate to one clear and consistent set of rules which everyone understands, giving a level playing field for all types of provider and allowing economies in the drafting and production of contracts, for example in respect of legal advice. It also allows NHS England, by inclusion of specific requirements on local bodies, to promote implementation at local level of key national clinical and service priorities.
- 7.2 By its powers under the National Health Service Commissioning Board and Clinical Commissioning Groups (Responsibilities and Standing Rules) Regulations 2012 (as amended), NHS England mandates that the NHS Standard Contract <u>must</u> be used by ICBs and by NHS England when commissioning NHS-funded healthcare services. This mandate continues to apply, <u>and must by law be</u> <u>complied with</u>, notwithstanding the establishment of ICBs and the general move towards system working and system accountability.
- 7.3 In determining what are "healthcare services", a useful point of reference will be whether registration with the Care Quality Commission (CQC) is required in order for an organisation to be permitted to provide them. The CQC publishes <u>scope of</u> <u>registration</u> guidance on this. "Healthcare services" include acute, ambulance, continuing healthcare, community-based, high-secure, mental health and learning disability services. Another helpful point of reference will be the scope of the new <u>NHS Provider Selection Regime</u> (PSR) (see paragraph 15 below). The <u>PSR</u>

statutory guidance provides, at Annex A, a list of "common procurement vocabulary" codes for healthcare services within scope of PSR. Where an NHS commissioner is commissioning any healthcare service within scope of PSR from a provider, then either the NHS Standard Contract or (where applicable) the relevant form of primary care contract must be used.

- 7.4 Note that the CQC's guidance includes a specific <u>section on transport services</u>, which makes clear that registration is required only for "transport (ambulance) services for the primary purpose of carrying a person who requires treatment". Where a package of services being commissioned includes transport services <u>within</u> scope of CQC registration, therefore, the NHS Standard Contract must be used. By contrast, a package of transport services <u>outside</u> the scope of registration should not be commissioned using the NHS Standard Contract.
- 7.5 The Contract must be used regardless of the proposed duration or value of a contract (so it should be used for small-scale short-term pilots as well as for long-term or high-value services). Where a single contract includes both healthcare and non-healthcare services, the NHS Standard Contract must be used.
- 7.6 The only exceptions relate to primary care services. As a general rule, for primary care services commissioned by NHS England (or by ICBs under delegated authority), the relevant primary care contract must be used, not the NHS Standard Contract. More specific detail is as follows.
 - General practice. <u>Guidance recently published by NHS England</u> clarifies that, where ICBs wish to commission local enhanced services from general practices, they can now do so either by using the GP contract as the contracting vehicle or by using the NHS Standard Contract.
 - Community pharmacies and optometrists. ICBs must use the NHS Standard Contract to commission any community-based services to be provided by pharmacies and optometrists which are beyond the scope of services covered by the Community Pharmacy Contractual Framework, or primary ophthalmic services contracts, as appropriate. Note however that, under the delegated arrangements for community pharmacies in place from April 2023, ICBs may choose to commission any of the enhanced services listed in Part 4 of the Pharmaceutical Services (Advanced and Enhanced Services) (England) Directions 2013 either using their own local documentation under the Community Pharmacy Contractual Framework or by using an NHS Standard Contract. Advanced services listed in the Directions should not be commissioned using the NHS Standard Contract.
- 7.7 The NHS Standard Contract must not be used by provider organisations when contracting with other provider organisations for the provision of clinical services. It is not designed for that purpose and is not fit for that purpose. In most circumstances, such arrangements will be correctly categorised as a sub-contracting of services commissioned under an NHS Standard Contract on which see paragraph 38 below.

8 Legally binding agreements

8.1 The Contract creates legally binding agreements between NHS commissioners and Foundation Trust, independent sector, voluntary sector and social enterprise providers. Agreements between commissioners and NHS Trusts are 'NHS contracts' as defined in Section 9 of the National Health Service Act 2006. NHS Trusts will use exactly the same contract documentation, and their contracts should be treated by NHS commissioners with the same degree of rigour and seriousness as if they were legally binding. Agreements that involve a local authority as a commissioner and an NHS Trust will be legally binding between those parties.

9 When to use the shorter-form Contract

- 9.1 The shorter-form Contract <u>must not be used</u> for contracts under which acute, cancer, NHS111, A&E, Urgent Treatment Centres or emergency ambulance services, or any other hospital inpatient services, including for mental health and learning disabilities, are being commissioned.
- 9.2 Restricting use of the shorter-form Contract in this way significantly reduces the number of detailed requirements which it has to include, and these providers (that is, providers of those services for which the shorter-form Contract must not be used) tend to be larger organisations.
- 9.3 Commissioners <u>may</u> use the shorter-form Contract for all other services for which the NHS Standard Contract is mandated – for non-inpatient mental health and learning disability services, for any community services, including those provided by general practices, pharmacies, optometrists and voluntary sector bodies, for hospice care / end of life care services outside acute hospitals, for care provided in residential and nursing homes, for non-inpatient diagnostic, screening and pathology services and for patient transport services.
- 9.4 The shorter-form version of the Contract must not be used where the Aligned Payment and Incentive (API) rules under the NHS Payment Scheme apply. Given that the API rules now apply to virtually all contracts with Trusts, this now means in practice that the shorter-form version of the Contract should generally not be used for Trusts, only for non-NHS providers. However, the 2023/25 NHS Payment Scheme created a new exception to the API rules, covering a situation where "the service provided is a single non-acute service procured by an ICB from an NHS provider". This will allow some flexibility for commissioners to award shorter-form Contracts, on the basis of locally agreed prices, to Trusts as well as to non-NHS providers. This may be appropriate for instance, where an ICB wishes to arrange a small community-based service on an "any qualified provider" basis.
- 9.5 Within the parameters set out in this Guidance, it is for commissioners to determine when they wish to use the shorter-form version of the Contract, as opposed to the longer form.
- 9.6 We have not set a specific financial threshold for use of the shorter-form contract, but we <u>strongly encourage</u> commissioners to use it for appropriate services (as described in 9.3 above) with lower annual values, which will tend to include the great majority of contracts held by the smaller provider organisations which this

contract form is particularly intended to assist. The end result of this approach should be that the shorter-form Contract is used for most contracts with smaller providers, including voluntary organisations, hospices (where grant agreements are not being used – see paragraph 11 below), care home operators and providers of enhanced services such as general practices, pharmacies and optometrists.

9.7 However, in deciding whether to use the shorter-form Contract to commission services for which it may be used, commissioners should consider carefully the differences in the management process and other provisions between the shorter-form and full-length Contracts. If the "lighter touch" approach of the shorter-form is not thought appropriate to the services, the relationship or the circumstances, the full-length Contract may be used. Also, if the provider is providing other services under the full-length Contract, it may be more appropriate to keep all services on this form.

10 What elements of the Contract can be agreed locally

- 10.1 The elements of the Contract for local agreement fall within the Particulars. The Service Conditions may be varied only by selection of applicability criteria, determining which clauses do and do not apply to the particular contract. The content of any applicable Service Condition may not be varied. The General Conditions must not be varied at all.
- 10.2 Commissioners must not:
 - put in place locally designed contracts or service level agreements for healthcare services, instead of the NHS Standard Contract; or
 - vary any provision of the NHS Standard Contract except as permitted by GC13 (Variations); or
 - seek to override any aspect of the NHS Standard Contract.
- 10.3 Where commissioners and providers wish to record agreements they have reached on additional matters, they may use Schedule 2G (Other Local Agreements, Policies and Procedures) or (in the full-length Contract) Schedule 5A (Documents Relied On) for this purpose. Commissioners are reminded that any such local agreements must not conflict with the national terms of the Contract. In the event of any such conflict or inconsistency, the national terms of the Contract will apply. GC1 makes clear that provisions in the General and Service Conditions will take precedence over the content of the Particulars so any attempt to override the national terms will be ineffective.

11 Use of grant agreements

- 11.1 Where voluntary sector organisations provide healthcare services, or other services in support of the healthcare needs of the local community, commissioners may choose to provide funding support for those services through grant agreements, rather than using the NHS Standard Contract.
- 11.2 Use of the Standard Contract is, however, necessary where it is clear that the

commissioner is commissioning (as distinct from providing funding support for) a specific clinical service (as distinct from non-clinical or clinical support services) from a voluntary sector organisation. (Note also that, whatever the nature of the services being provided, if those services are being competitively tendered and potential providers include both voluntary sector and other types of provider, the same form of contract must be offered to all potential providers of the relevant service – which precludes the use of a grant agreement.)

- 11.3 However, where the commissioner is providing funding support towards the costs a voluntary sector provider faces in running a service (and especially where some of the providers' costs are being met by donations and/or payments by service users), it will generally be more appropriate for commissioners to use a grant agreement rather than the Standard Contract, and we would strongly urge them to do so. This will apply to some hospice services, for example.
- 11.4 NHS England has published a non-mandatory model grant agreement for use by ICBs with voluntary sector organisations which provide clinical services (available on the <u>NHS Grant Agreement web page</u>). This has been designed to provide an appropriate level of assurance for commissioners about the quality of care to be provided by the voluntary organisation but without replicating the more onerous requirements of a full contract. Additional guidance on grant funding is available on the NHS Grant Agreement web page.
- 11.5 Where commissioners choose not to use the national model grant agreement, they should ensure that any locally drafted grant agreements are very clear as to the purpose for which the grant is being made, suitably robust (particularly in terms of clinical governance requirements) and properly managed.

12 NHS Continuing Health Care and Funded Nursing Care

- 12.1 The NHS Standard Contract (typically the shorter-form version) must be used where an NHS commissioner is funding an individual's NHS Continuing Health Care (NHS CHC) placement in a care home or package of home care. Commissioners must not rely on locally drafted alternatives to the NHS Standard Contract or on purchase orders alone. Nor are Non-Contract Activity approaches suitable in a CHC context. CHC is, typically, planned activity, meaning that there should be time to put appropriate contract documentation in place; and the interests of service users and commissioners will be best served if this is always done.
- 12.2 It is clear that there will often be benefits from collaborative commissioning of, and contracting for, NHS CHC services producing economies of scale for commissioners and reducing the number of separate contracts a care home needs to hold, for instance. Collaborative contracting will also enable commissioners to work jointly in respect of quality oversight of NHS CHC services, ensuring that their limited resource is used effectively and without placing multiple burdens on providers.
- 12.3 When contracting for NHS CHC, commissioners may put in place standardised care packages with fixed prices for different levels of complexity of need, and these should be set out in Schedule 3C (Local Prices). Where individually priced packages of care for new patients are likely to be agreed in-year based on

differing inputs from different staff types, Schedule 3C can also record the agreed unit prices for such inputs. It should be possible to avoid having to vary the contract formally in-year to record each new or revised individual care package. The call-off / framework arrangements described in section 27 below will often work well for CHC, allowing the detailed requirements for an individual service user to be set out in a specific Individual Placement Agreement, which sits within an over-arching contract with the provider.

- 12.4 We do not mandate use of the NHS Standard Contract in respect of NHS Funded Nursing Care (NHS FNC) (where, following assessment, the NHS makes a nationally set contribution to the costs of a nursing home resident's nursing care). If commissioners and providers agree locally that use of the Contract offers an effective route through which NHS FNC payments can be administered, they may do so.
- 12.5 Further information is available on CHC in the <u>National Framework for NHS</u> <u>Continuing Healthcare and NHS Funded Nursing Care</u> and on FNC in <u>NHS-funded</u> <u>Nursing Care Practice Guidance</u>.
- 12.6 DHSC has published <u>Hospital Discharge and Community Support Guidance</u>, which came into effect on 1 April 2022. It states that local areas should adopt discharge processes that best meet the needs of the local population. In situations where short-term residential care placements are to be provided in order for requirements for longer-term care to be properly assessed, and where these placements are to be funded in whole or in part by the NHS, they should be commissioned using the NHS Standard Contract.

13 Collaborative contracting

- 13.1 The NHS Standard Contract may be used for both bilateral and multilateral commissioning i.e. for commissioning by a single commissioner or by a group of commissioners collaborating to commission together, with one acting as the co-ordinating commissioner.
- 13.2 Clearly, it is for commissioners to determine the extent to which they choose to adopt the co-ordinating commissioner model but it is an approach which we strongly encourage. There can be great benefits for commissioners from working closely together to negotiate and manage contracts with providers. Using the co-ordinating commissioner model enables a consistent approach to contracting and is more efficient for both commissioners and providers, avoiding a proliferation of small, separate contracts. Collaborative commissioning between ICBs remains an important tool, as it was between CCGs.
- 13.3 The "footprint" for collaborative arrangements is for local agreement but it makes sense for it to be as wide as possible, ideally including all of the commissioners who will need to have a written, signed contract with that provider, rather than falling within the new Low Volume Activity arrangements for Trusts or traditional non-contract activity arrangements for other providers (see paragraph 25 below).
- 13.4 In particular, we would encourage commissioners to work together to use, where they can, consistent contract metrics for the same provider local quality and reporting requirements, local agreements, policies and procedures, Activity

Planning Assumptions or Prior Approval Schemes. This will help to reduce the administrative burden which providers face.

- 13.5 Where commissioners choose to contract collaboratively, they should set out the roles and responsibilities that each commissioner will play in relation to the contract with the provider, and how they are to make decisions in relation to the contract and instruct the co-ordinating commissioner to act on their behalf, in a formal collaborative commissioning agreement (CCA). The CCA is a separate document entered into by a group of commissioners and governs the way the commissioners work together in relation to a specific contract. A CCA should be in place before the contract is signed and takes effect. However, a contract which has been signed by all the parties (as outlined in paragraph 21 below) is still legally effective and binding on all the parties without a collaborative agreement in place. The CCA should not be included in the contract (though the allocation of roles and responsibilities between commissioners which are party to a contract can, where necessary, be set out in Schedule 5C (Commissioner Roles and Responsibilities) to that contract).
- 13.6 Model CCAs are available on the <u>NHS Standard Contract web page</u>.
- 13.7 One specific addition to the model CCAs should be highlighted. Certain management actions under the Contract fall to the co-ordinating commissioner to take, rather than to each individual commissioner; these are known as "Co-ordinating Commissioner Actions". It is important that each individual commissioner has confidence that the co-ordinating commissioner will take appropriate action on its behalf. In general, this should not be an issue multiple ICBs commissioning the same services from a provider will all have the same interest in seeing performance issues with those services addressed, for example. But there may be instances (for instance in a joint contract signed between NHS England and ICBs) where an individual commissioner wants the co-ordinating commissioner to take action in respect of a service or population for which only that commissioner has responsibility. We have therefore added provisions to the model CCA at paragraph 7, making clear that, in the circumstances described above,
 - a commissioner may request that the co-ordinating commissioner undertake a specific Co-ordinating Commissioner Action; and
 - the co-ordinating commissioner must not unreasonably refuse to take such action.
- 13.8 Where NHS England is the sole commissioner party to a contract, but the lead role for commissioning of particular services from the provider is being taken by different NHS England teams, use of a formal CCA is not appropriate as NHS England is one legal entity. However, it is important to ensure that the different teams understand what role each will play in managing the contract and communicate this clearly to the provider.

14 Which commissioners and providers can be party to the Contract

- 14.1 The Standard Contract <u>must</u> be used by ICBs and by NHS England in the circumstances explained in paragraph 7 above and <u>may</u> be used by local authorities and by other public bodies such as the police when commissioning healthcare services. Any combination of these commissioners may agree to work together to hold a single contract with a given provider, identifying a co-ordinating commissioner and putting in place a collaborative agreement as set out above.
- 14.2 Even where they are placing separate contracts from NHS commissioners, local authorities may wish to use the NHS Standard Contract, for example to commission services from a provider whose main business is the supply of services to NHS commissioners. In this situation, it is not mandatory for local authorities to use the NHS Standard Contract, but they may choose to do so. In a situation where NHS commissioners and a local authority are intending to sign the same single contract with a provider, however, and where the service being commissioned involves a healthcare service, then the NHS Standard Contract must be used. Additional requirements relating specifically to social care services can of course be included in the Schedules as appropriate, so long as they do not contradict the General Conditions or Service Conditions.
- 14.3 By contrast, where an NHS commissioner has delegated commissioning responsibility to a local authority under a formal lead commissioning (section 75) arrangement, the local authority would (in the absence of any agreement with the NHS commissioner to the contrary) be able to contract on its own chosen basis. As the NHS commissioner would not be a party to the contract, there would be no statutory requirement for the NHS Standard Contract to be used although, again, the local authority may choose to do so. The NHS commissioner will however remain liable under statute for the performance of the functions it has delegated, so should satisfy itself that the arrangements being put in place are such that it can meet its statutory obligations.
- 14.4 Careful consideration needs to be given to s75 arrangements which will encompass services within scope of the NHS legal right of choice of provider. Where this is to be the case, in order to maintain patients' rights to choice, the NHS Standard Contract must always be used and the NHS commissioner must always be a direct signatory to the contract with the provider.
- 14.5 There is no restriction on the types of provider organisation which can hold an NHS Standard Contract. These can include (but are not limited to) NHS Trusts, NHS Foundation Trusts, charities and private companies of different types.
- 14.6 We are sometimes asked about whether a sole trader can be a provider under an NHS Standard Contract. There is no prohibition on awarding a commissioning contract to a sole trader, but the commissioner will need to satisfy itself (as it would in respect of any other type of provider) that the sole trader:
 - is appropriately skilled, qualified and experienced to deliver the service in question; and

- holds a provider licence where required (and the facilities from which it intends to deliver the service are CQC registered); and
- has appropriate insurance or other indemnity arrangements in place; and
- has sufficient financial assets (and/or can provide an appropriate third-party guarantee or other form of security) to provide assurance to the ICB that he or she has the wherewithal to deliver the contract in accordance with its terms.
- 14.7 Some non-NHS providers have complex structures involving parent companies and subsidiaries / group companies. Commissioners must ensure that the contract they sign states the correct legal entity as the provider. This will be established through the process through which the provider is selected and the contract is awarded. The organisation selected through that process will be the provider named in the contract awarded and the contract must be signed by an authorised signatory of that organisation.
- 14.8 Providers may wish to operate an arrangement whereby the contract is held in the name of a parent company, but the services are in practice delivered by a subsidiary or other group company. In that case, the requirements of GC12 in relation to sub-contracting must be followed with the provider requesting approval from the commissioner for the proposed sub-contracting arrangement and then, if that proposal is approved, putting in place a sub-contract between the provider company and the subsidiary / group company.

15 NHS Provider Selection Regime

- 15.1 Subject to parliamentary approval, the <u>Health Care Services (Provider Selection</u> <u>Regime) Regulations 2023</u> (which we'll refer to from now on as the PSR Regulations) will come into force on 1 January 2024. The PSR will be a new regime for the procurement of healthcare services by relevant authorities (NHS England, ICBs, NHS Trusts and NHS Foundation Trusts, and local and combined authorities).
- 15.2 Various resources to help relevant authorities and providers plan for the implementation of the new regime are available on, or signposted from, the <u>NHS</u> <u>England PSR webpage</u>. These include draft statutory guidance, a draft toolkit, a set of FAQs and a series of supporting webinars.
- 15.3 Annex F of the PSR Guidance sets out detailed transitional arrangements, and it will be important that commissioners apply these carefully in the 2024/25 contracting round. Key points are summarised below.
 - Any in-scope procurement process for healthcare services <u>commenced on or</u> <u>after the date the PSR comes into force</u> (presently intended to be 1 January 2024) must be undertaken in accordance with the new PSR regulations and guidance. This is the case for all new contracts to be awarded (including those awarded based on a framework agreement, either newly established or already existing), for all new framework agreements that are established and for all contract modifications that take place.

- But any procurement processes begun prior to the 1 January 2024 must either be completed on the basis of existing procurement regulations and guidance (Public Contracts Regulations and Procurement, Patient Choice and Competition Regulations) or abandoned and then re-started under the new PSR Regulations and guidance.
- However, from 1 January 2024 onwards any changes to any healthcare contracts or framework agreements (whether awarded under the PSR or the previous procurement regime) will be governed by the PSR Regulations.
- 15.4 Where a competitive process is to be undertaken under the PSR, for healthcare services for which the NHS Standard Contract must be used, the same version of the Contract must be offered to all potential providers, regardless of type. This means that the commissioner must make clear, at the outset, whether its intention is to offer the full-length or shorter-form version of the Contract and then act accordingly in terms of the version of the Contract which it then awards to the successful provider(s).

16 Contract expiry and notice requirements

- 16.1 We are often asked how, where contracts are approaching their expiry date, commissioners and providers should communicate with each other about their future intentions and what timescales apply, and some general guidelines on this are set out below.
 - Where a contract is expiring, there is no contractual requirement on either party to give notice to terminate the contract or a specific service at the point at which the contract expires.
 - Equally, there is no contractual requirement for commissioners to publish generic 'commissioning intentions' by a given date. Issuing of generic commissioning intentions documents, often aimed at a commissioner's providers collectively, rather than setting out specific information for individual providers, is at the discretion of the relevant commissioner.
 - However, early communication of both commissioner and provider intentions is always good practice. In terms of a possible new contract for a new financial year, it is in both parties' interests to set out their intentions clearly in time for necessary negotiations, or other processes, to be completed before any new contract is intended to take effect.
 - In advance of the expiry of a contract, the commissioner should as a matter of good practice, for instance, notify the provider that it no longer wishes to commission a specific service in the following year. In such a case, the requirements for the procurement process to be transparent and for the incumbent provider to share information about the services and the potential impact of handover to a new provider (for example, workforce information in expectation of TUPE applying), will mean that early communication of commissioner intentions is always required.

- Similarly, a provider should as a matter of good practice notify the commissioner that it no longer wishes to provide a particular service in the following year. If the service has been designated as a Commissioner Requested Service (CRS) (see paragraph 37 below), then restrictions on the provider's ability to withdraw provision of the service will apply, in line with CRS guidance.
- There will be other instances where either party is seeking changes, in a new contract for the following year, to services commissioned or to detailed contractual provisions (local quality and reporting requirements, say). As with in-year variations to agreed contracts, there is no specific period of notice which must be given for such changes; rather, the complexity of the issues involved and the time realistically needed to implement the specific changes proposed should drive the timescale for discussions. Both parties should remember that agreeing a contract tends to be a process of negotiation; it makes sense for all major changes which either party wishes to propose to be 'on the table' before detailed negotiations get under way, but it will often be possible to accommodate smaller changes after that point.

17 Changes in counting and coding practice

17.1 One instance where formal notification is required in advance of a new financial year, <u>even where a contract is expiring</u>, is in relation to changes in counting and coding practice, as set out in SC28. This requires that each party gives the other at least six months' notice of locally proposed counting and coding changes, with the change normally taking effect from the start of the following Contract Year. Further detail, covering how the financial impact of counting and coding changes should be managed, is set out in paragraph 44 below.

18 Contract duration

- 18.1 The NHS Standard Contract allows the commissioner to select the contract term it wishes. There is no default duration.
- 18.2 In principle, longer-term contracts can be a key tool for commissioners in transforming services and delivering significant, lasting improvements in service quality and outcomes. A longer-term contract allows time for providers to plan and deliver substantial service reconfiguration, for example. Where significant up-front capital investment is needed, a longer-term contract allows the provider to recoup this over the full duration of the contract. In both cases, offering contracts with a longer term has the potential to attract a wider range of providers, thus strengthening the pool of bidders from which the commissioner can select its preferred provider.
- 18.3 Equally, there will, of course, be situations where contracts with a shorter term may be appropriate, for example where the commissioning requirement is for a short-term or pilot service or where the service or supplier landscape is changing rapidly.
- 18.4 There is no nationally mandated limit to contract duration, nor is there a central approval process for contract terms beyond a certain duration. It is for

commissioners to determine locally, having regard to the guidelines below, the duration of the contract they wish to offer.

- Commissioners will need to consider carefully what benefits they can expect from offering providers the increased certainty of a longer-term contract, setting this against the need to ensure that they are able to use a competitive procurement approach when this will be in patients' best interests, in line with regulations and guidance. Commissioners should consider patient choice, competition, the likelihood of technological and other developments affecting service delivery models, all relevant commercial and market considerations, in determining the appropriate length of contract. Contract length should be considered in conjunction with consideration of including any right to extend the contract (see paragraph 19) and/or the consequences of early termination (see paragraph 47).
- Commissioners must ensure that they make clear the duration of the contract to be offered at the very outset of the procurement process.
- Commissioners must ensure that the duration of any contract (and any proposed right to extend that period) is in compliance with their own standing financial instructions (SFIs) and other governance requirements, and that any approvals are obtained in line with those requirements. NHS England commissioners should note that NHS England's own SFIs set out specific arrangements for the approval, prior to advertisement, of procurement processes; commissioning teams should ensure that they review the SFIs in advance of advertisement to ensure that all required approvals have been obtained.
- 18.5 Alongside flexibility of contract duration, the Contract:
 - includes an explicit acknowledgement of the parties' rights to terminate the Contract or any Service by mutual agreement (GC17.1); and
 - continues to include provisions for early termination of the Contract or a Service on a no-fault basis (in addition to rights to terminate when a party is in default), with flexibility as to notice periods (and note that different notice periods may be agreed for termination of the whole Contract or for a Service).
- 18.6 Where a multi-year contract is in place, both commissioner and provider are able to propose variations to the local terms (for example to effect annual reviews of local prices, service specifications and local quality requirements). In respect of the updating of the national terms, see section 22 below.

19 Extension of contracts

19.1 Commissioners may wish to offer a contract with the possibility of extension – for example, a five-year contract term with the potential for an extension, at the commissioner's discretion, by a further two years or up to two years. Schedule 1C of the NHS Standard Contract is designed for that possibility and, if required, the commissioners should set out the optional extension period(s) and notice period there.

- 19.2 Even where the possibility of an extension has been provided for in Schedule 1C, any extension to the term of an NHS Standard Contract is a "modification" of that contract as defined in the PSR Regulations. As stated at paragraph 15.3 above, from 1 January 2024 onwards any changes to any healthcare contracts or framework agreements (whether awarded under the PSR or the previous procurement regime) will be governed by the PSR Regulations. So the PSR Regulations will govern any extension to an NHS Standard Contract regardless of when that contract was entered into.
- 19.3 Commissioners should therefore consider <u>PSR Regulations 13 and 14</u>, and the sections of <u>PSR Guidance</u>, dealing with modification of contracts and framework agreements during their term and with urgent awards and modifications, when either considering including an option to extend in a contract or considering actually extending a contract.
- 19.4 If a contract was entered into before the commencement of the PSR and already includes a populated Schedule 1C, it will not be necessary to vary that Schedule to reflect the new PSR regime. But we have made some changes to the template wording and added some guidance to Schedule 1C for 2024/25 to take account of the new regime.
- 19.5 The PSR permits modifications that are "clearly and unambiguously provided for in the contract" (regulation 13(1(a) of the PSR Regulations). The optional extension provisions at Schedule 1C of the NHS Standard Contract 2024/25 are intended as a template to include a clear and unambiguous modification to the contract (the modification being the extension of the term).
- 19.6 While regulation 13(1)(a) does not itself limit the duration of an extension to the contract term which can be clearly and unambiguously provided for in the contract, it is essential that this regulation is not misused. Remember that the overriding principles of the PSR are that relevant authorities are to:
 - act with a view to securing the needs of the people who use the services, improving the quality of the services, and improving the efficiency of in the provision of the services;
 - ensure decisions about which organisations provide health care services are robust and defensible, with conflicts of interest appropriately managed; and
 - adopt a transparent, fair, and proportionate process when following the PSR.

If commissioners are considering making provision in their contract for a potential extension, they should take these overriding principles into account. For example, given these overriding principles, the commissioners may want to provide for a single extension, or a limited number of short-term extensions, of an aggregate period no longer than the original contract. This will provide the opportunity for the commissioners to reassess the provider market when the end of the original term, and of any extension period, is approaching and consider at each point whether another provider is in a better position to achieve the 'key criteria' set out in Regulation 5 of the PSR Regulations.

- 19.7 Where provision for extension is made in a contract, the extension can then be effected by the co-ordinating commissioner (on behalf of all commissioners which are party to the contract) giving notice to the provider that it wishes to implement the extension.
- 19.8 Where a notice to extend is given, the contract term is automatically extended; no contract variation is necessary to effect it, and the provider may not refuse an extension (though it may of course still give notice to terminate the contract under the provisions of GC17).
- 19.9 Note that Schedule 1C assumes that any extension effected under the option will apply to all commissioners which are party to the contract, and to all services commissioned under it.
- 19.10 But, as stated at paragraph 3 of Schedule 1C, an option to extend may be exercised in conjunction with a contract variation if required. So, either before or immediately after the option is exercised, the parties may agree (subject to the terms of GC13 and to PSR Regulations 13 and 14) to vary the service specifications or other locally-populated elements of the contract – and it will then be the scope and terms of the contract as varied which apply to the extended term.
- 19.11 Whether or not the Schedule 1C text is included, the contract term may be extended if any of the other circumstances under which modification to the contract is permissible under regulation 13 or regulation 14 of the PSR Regulations apply. We recommend that commissioners take legal advice if considering an extension to the contract term in any circumstances or on any terms other than those set out clearly and unambiguously in Schedule 1C to their contract.
- 19.12 Note that the PSR Regulations require the commissioner to submit a notice of the extension (ie the modification to the contract) for publication on the UK e-notification service:
 - if it is made under regulation 13 and the cumulative value of modifications made since the start of the contract is £500,000 or more; or
 - if it is made under regulation 14.

20 Heads of Agreement

- 20.1 We are sometimes asked about Heads of Agreement and whether these have a place in the negotiation of new contracts.
- 20.2 Heads of Agreement are different to contracts. They are typically pre-contract agreements and are not intended to create a binding arrangement between the parties (which is why they generally include the caveat "Subject to Contract"). In complex procurement and contract negotiation scenarios, Heads of Agreement (sometimes also referred to as Heads of Terms) may be useful as a way of documenting progress towards intended signature of a binding contract but in most NHS commissioning situations, both parties will be better advised to focus on agreeing and signing the actual contract itself.

21 Signature of contracts and variations

- 21.1 A contract must be signed by an appropriately authorised signatory of each party to it. Where a group of commissioners wishes to enter into a contract with a provider, each of the commissioners must sign the contract and cannot delegate this responsibility to another commissioning body. By "signed" we mean (i) signed physically, in hard copy form, or (ii) subject to our further guidance below, signed electronically.
- 21.2 We have previously recommended that contracts (and other contractual documents) are signed physically, in hard copy form, by the authorised signatory of each party, unless the parties have taken legal advice on appropriate governance arrangements and on the risks involved (but see our updated guidance below). As set out in GC38, hard copy signatures can be applied to original and counterpart copies of the relevant document where necessary. Such hard copy signatures can be physically returned to the co-ordinating commissioner by post, but can alternatively be scanned and returned to the co-ordinating commissioner by email. The co-ordinating commissioner should maintain a record of all contract signatures and should provide copies to other commissioners for audit purposes.
- 21.3 We recognise that the collection of signatures from commissioners is a timeconsuming process. Variations may therefore be signed by the provider and the co-ordinating commissioner (on behalf of all commissioners) only, rather than by all commissioners (see GC13.4). Commissioners must therefore ensure that their collaborative agreements set out very clear arrangements through which Variations are agreed amongst commissioners, prior to signature by the coordinating commissioner. The co-ordinating commissioner must maintain a record of evidence that each variation has been properly approved by all commissioners (whether or not they are directly affected by the variation – because all are parties to the contract being varied) and must be prepared to confirm to the provider that it has the agreement of all commissioners, before a variation is signed.
- 21.4 We recognise that use of electronic signatures (via appropriate internal governance procedures and IT software) for signing of legal documents is becoming common in some areas of commerce, and this practice has become much more widespread both as a necessary consequence of the Covid-19 pandemic and as a result of the Lord Chancellor's confirmation of the Government's agreement with the Law Commission's report on Electronic Execution of Documents in March 2020. We continue to recommend that parties do not use or accept electronic signatures for signing of contracts (or other contractual documents) without having taken their own legal advice on appropriate governance arrangements and on the risks involved and having consulted their own organisation's guidance and governance documents on the use and acceptance of electronic signatures.
- 21.5 Here are some general pointers on use and acceptance of electronic signatures in relation to the contracts, sub-contracts and variations which are the subject of this Technical Guidance. They should not be taken as a substitute for parties taking their own legal advice and consulting their own organisation's guidance and governance documents, nor as being applicable to all legal documents.

- An electronic signature is capable in law of being used to sign a document provided that: (i) all parties to the document intend that that electronic signature will authenticate the document on the relevant party's behalf; and (ii) any formalities (eg governance requirements) relating to the signing of that document by that party are satisfied. If these conditions are met, the document will be deemed signed just as it would if signed by hand in ink.
- Generally, only the following forms of electronic signature should be considered as 'safe': (i) the use of electronic signature software platforms, and (ii) uploading scanned photos of signatures.
- Security measures can help to provide evidence as to who exactly signed the document and when. Such security measures can include the signatory signing the document from their own account or a computer that they had to use a personal password, pin or encryption key to access. Electronic signature platforms can also give further evidence as to IP addresses and the time and date of signature.
- Documents may be signed electronically by a delegate of the authorised signatory, but only if the authorised signatory has given the delegated person the authority to do so. It is advisable to have an audit trail of confirmation of this delegated authority.
- A combination of wet signatures and electronic signatures can be used by different parties on signing. If the document is signed electronically by both parties, it is not necessary to keep a hard copy. Documents can be electronically signed in counterpart or the same document can be signed electronically by all parties.

22 Updating non-expiring contracts

- 22.1 Where a multi-year contract is in place and continues into a new financial year, the updated General Conditions and Service Conditions, once published online by NHS England in final post-consultation form, <u>will take automatic effect from 1 April of the new financial year</u>, without any need for local action. (Further detail about these online publication arrangements can be found in paragraph 33 below.)
- 22.2 In this situation, the commissioner and provider are very likely to need to agree a Variation locally between them to update aspects of the Particulars (prices and contract values, for instance). When we publish the final 2024/25 Contract, therefore, we will also provide a model Variation template and guidance for 2024/25, offering two options for updating multi-year contracts.
 - The first will allow for a full set of Particulars to be updated, attached to the Variation Agreement and exchanged. This will be appropriate where there are changes to the local content of large number of the Schedules.
 - The second simpler option will be appropriate where most Schedules can be left unchanged from 2023/24 to 2024/25, but the parties need to update a small number of Schedules (payment, the Indicative Activity Plan or SDIPs, for example).

23 **Resolution of disputes**

- 23.1 Arrangements for resolution of disputes which arise once a contract has been agreed are dealt with under GC14.
- 23.2 <u>Revenue, finance and contracting guidance for 2024/25</u>, when published, will describe the timescale and process for resolving disputes over the agreement and signature of new contracts with Trusts for 2024/25.

24 What happens when there is no signed contract in place?

- 24.1 There may be instances where commissioners and providers have not signed a new contract by the time at which the current contract expires but, because the services being provided are crucial for the local community, they must continue to be delivered.
- 24.2 In this situation (assuming services continue to be provided and paid for), a contract will be implied between the parties. The local terms of that implied contract will reflect what can be inferred as having been agreed between them based on correspondence between them, notes of meetings, drafts exchanged and so on. It would be reasonable to assume that the implied contract would incorporate the nationally drafted terms of the NHS Standard Contract for the relevant year (since those are the only terms on which NHS commissioners are permitted to commission the services in question).
- 24.3 However, in the absence of clear evidence of terms agreed, aspects of the implied "deal" between the parties may be uncertain. For this reason, it is very important that the parties continue to make every effort to reach agreement and sign a contract as soon as possible.

25 Low Volume Activity and Non-Contract Activity

25.1 Low-Volume Activity (LVA) and Non-Contract Activity (NCA) are terms used to refer to NHS-funded services delivered to a patient by a provider which does not, at the point at which those services are delivered, have a written contract in place with that patient's responsible commissioner, but which does have a written contract for the delivery of that service in place with at least one other NHS commissioner.

Low Volume Activity arrangements

25.2 LVA arrangements apply to certain relationships between ICBs and NHS Trusts / NHS Foundation Trusts. Full detail is set out separately in the <u>2023/25 NHS</u> <u>Payment Scheme.</u>

Non-Contract Activity arrangements

25.3 NCA arrangements will operate as described in the remainder of this paragraph 25. They will be relevant for flows of activity between ICBs and non-NHS provider organisations where no written contract is in place, as well as for a small number of ICB / Trust activity flows specifically excluded from the LVA arrangements.

What contractual terms apply under an NCA approach?

- 25.4 NCA is undertaken by the provider on the terms of the NHS Standard Contract in place between that provider and its host commissioner(s). A contract on those terms will be <u>implied</u> as between the patient's responsible commissioner and the provider (except where specific different arrangements are agreed between the responsible commissioner and the provider, for example in respect of prices as set out in 25.5b) below).
- 25.5 Note in particular that:
 - a) services will be delivered in accordance with the service specifications and other terms and conditions of the provider's contract with its host commissioner;
 - b) prices for services will be <u>either</u> the relevant unit prices (where these apply and subject to any locally agreed adjustments) <u>or</u> (where there are no applicable unit prices listed in the NHS Payment Scheme) the local prices set out in the provider's contract with its host commissioner(s) but noting that, where the host contract provides for a service to be paid for as part of a block or similar arrangement, the price payable for the NCA will be (a) the unit price, where there is one for that service or (b) a local price to be agreed between the provider and the responsible commissioner in accordance with NHS Payment Scheme guidance;
 - c) arrangements for submission of activity datasets, invoicing and payment reconciliation should follow NHS Payment Scheme guidance and the terms and conditions set out in the NHS Standard Contract; this means in practice that non-NHS providers must invoice for NCA monthly in accordance with either SC36.23 or SC36.24 (full-length Contract) or SC36.17 (shorter-form Contract);
 - commissioners will be under no obligation to pay for activity where activity datasets and invoices are not submitted in line with these requirements but must, if they intend to do so, contest payment within the timescales set out in SC36.30 (full-length) and SC36.22 (shorter-form);
 - e) commissioners and providers should work together in good faith to minimise disagreements relating to prices and payment for NCA, but any formal disputes must be resolved in accordance with the dispute resolution procedure set out in GC14 of the Contract; and
 - f) while a commissioner dealing with a provider on an NCA basis may take some comfort from the fact that that provider's host commissioner should be holding that provider to account under the terms of the host's contract, it should always remember that it is not the host's role to monitor the performance of services under the NCA commissioner's implied contract. That is an entirely separate contract, which is for the NCA commissioner to monitor and manage, using the provisions of GC9 and so on, as necessary.

From a public value-for-money perspective, it is very important that, where a commissioner receives an invoice for the first time from a provider with which it does not have a written contract, it checks the basis on which that invoice is being submitted before making any payment in respect of that invoice, rather than simply paying it without question. Checking that the provider does indeed hold an NHS Standard Contract with another commissioner, which properly entitles it to provide those specific services to the first commissioner's patients, at the location at which they have been provided, and on an NCA basis, will be a necessary first step. A provider wishing to provide services on an NCA basis must, on request, share with the NCA commissioner full details (including pricing) of the written, signed contract / contracts it holds with another commissioner / other commissioners and on which it is relying in order to undertake NCA.

When can an NCA approach be adopted?

- 25.6 NCA arrangements will only be appropriate, and should only be necessary, in a limited number of situations.
 - One ICB may ask a non-NHS provider of patient transport services, which holds a contract with another ICB, to undertake a single journey for it, to repatriate a patient admitted to a distant hospital as an emergency. An NCA approach will be appropriate in such a case.
 - A provider of elective services may have agree a written, signed contract with one ICB, but may then find that its services attract occasional referrals, under the legal right of patient choice, from other ICBs with which it does not have a written, signed contract. Where this happens, the provider and those other ICBs may reasonably operate on an NCA basis.
- 25.7 But NCA arrangements are not intended as a routine, ongoing alternative to the discipline of written, signed contracts. Having a written contract will always be more robust and clearer than having an implied contract on an NCA basis; there will be less scope for misunderstanding and dispute with a written contract in place.
- 25.8 We are aware, however, of situations in which despite an established flow of activity either provider or commissioner is reluctant to move away from an NCA relationship, believing that the NCA approach will somehow best serve its interests. This is misguided.
 - Relying heavily on an NCA approach is inherently risky for a provider. If a
 provider holds only one written signed contract for all of its activity, including
 NCA, then were that contract to expire or be terminated, the provider would
 have no basis on which to accept NCA under patient choice.
 - A provider may believe that an NCA approach means that it is less accountable to its NCA commissioner than it would be under a written, signed contract and that its NCA commissioner is powerless to use contractual levers to hold it to account. This is simply not the case. As described at paragraph 25.5 above, all of the contractual levers which are available to any commissioner or to the co-ordinating commissioner can be used by an NCA commissioner. It can for instance request information from the provider under SC28, require reports

from it under Schedule 6A, contest payment to it under SC36 and manage its performance under GC8-9.

- Equally, a commissioner will be much better placed to ensure that the requirements of its local population are being met if it can specify those requirements as part of a written, signed contract; it can then refer directly to its own desired referral and discharge protocols or shared care arrangements, for example.
- 25.9 Our advice therefore remains that written contracts, using the NHS Standard Contract format, should be put in place between commissioner(s) and provider in all cases where there are established flows of patient activity with a material (even if unpredictable) financial value. If this is done using the multi-ICB collaborative contracting approach described at paragraph 13 above, the result will be a more efficient, effective and joined-up set of contractual arrangements.
- 25.10 In particular, bespoke, high-cost, locally priced residential placements of individual patients should always be covered by a written contract in the form of the NHS Standard Contract. Reliance on an NCA approach in this situation creates too great a risk of uncertainty as to what has been agreed. Agreed details can be set out in individual placement agreements called off under the contract, as described in paragraph 27 below.

Acceptance of referrals by NCA providers

- 25.11 It is important for patients that providers of NHS-funded services accept referrals from all appropriate sources.
- 25.12 The Contract includes a specific requirement on providers (SC6.13.2 in the fulllength version, SC6.2.2 in the shorter-form) to accept every referral, regardless of the identity of the responsible commissioner, where this is necessary to enable a patient to exercise his/her legal right of choice of provider. This applies whether or not the responsible commissioner for the patient affected is a party to a written contract with the provider. (Note, however, the restrictions which apply in respect of GP referrals to elective acute services not made via e-RS – see paragraph 42.19 below.)
- 25.13 There is also an equivalent provision in relation to the acceptance of emergency referrals and presentations which are within the scope of the services it provides (SC6.13.3 full-length, SC6.2.3 shorter-form). Again, this requirement applies whether or not the responsible commissioner for the affected patient is a party to a written contract with the provider. There will be instances where a provider cannot safely accept an emergency referral, and so should reject it, and the Contract wording makes provision for this.
- 25.14 These provisions continue to apply to Trusts operating under the LVA arrangements described in paragraph 25.2 above, as well as to non-NHS providers, and can be enforced by the responsible commissioner of any affected patient, either through the co-ordinating commissioner for the provider's main contract or directly via GC29.1 (Third Party Rights). It is therefore not acceptable (and is a breach of contract) for a provider, with or without the support of its main local commissioners, to adopt a systematic policy of rejecting "choice" referrals or

emergency presentations from distant ICBs (including those operating on an NCA or LVA basis), whilst continuing to accept those from within its local area. (In extreme situations, where a provider believes that it cannot safely manage the volume of choice referrals it is receiving, it may approach the commissioner and ask the commissioner to consider suspending <u>all</u> (or all non-urgent) new referrals, from all commissioners, into the affected service for a time-limited period. Suspension (under GC16: note the contract definition of "Suspension Event" – see paragraphs 47.11-13 below) can only be initiated by the commissioner. If the commissioner agrees to a suspension, commissioner and provider can then work jointly on managing the impact of the suspension, in terms of communicating with patients, referrers and other affected providers, with the aim of ensuring that patients can continue to be cared for safely and appropriately.)

25.15 Conversely, we also set out clearly (SC6.14 in the full-length Contract, SC6.3 in the shorter-form version) that the existence of a contract with one commissioner does not automatically entitle a provider to accept referrals in respect of, provide services to, nor to be paid for providing services to, individuals whose responsible commissioner is not a party to the contract, <u>except</u> (where appropriate) where such an individual is exercising their legal right to choice as set out in the <u>NHS</u> <u>Choice Framework</u> or where necessary for the individual to receive emergency treatment. (See paragraph 25.19 below for further detail on the application of the legal right of choice.)

Commissioner prior approval for NCA activity

- 25.16 In this context, the following arrangements apply, within England, in terms of commissioner approval processes for NCA.
 - a) No prior commissioner approval is required for emergency treatment on a noncontract basis.
 - b) Except where necessary under paragraph 25.18 below, no prior commissioner approval is required for consultant-led elective care or in the case of mental health, services led by a healthcare professional, where the patient has exercised choice of provider under the legal rights set out in the NHS Constitution. A GP, dentist or optometrist referral is required in such cases, however: self-referral is not sufficient.
 - c) In other circumstances than those set out in paragraphs a) and b) above, there is no presumption that a provider may see and treat patients, on a non-contract basis, and expect to be paid by commissioners. Commissioners have the right to determine which services they wish to commission and from which providers. Rather, the provider must seek prior authorisation from the responsible commissioner before assessing and treating the patient. Where prior authorisation is not granted, commissioners are under no obligation to pay for activity which is carried out by providers on a non-contract basis.

Under the LVA arrangements for Trusts, described in paragraphs 25.2 above, there is no requirement to seek prior authorisation.

25.17 For elective NCA referred into an English provider across a UK border, the provider is advised to seek and obtain prior approval from the relevant NHS body

in Scotland, Wales or Northern Ireland before providing care or treatment.

- 25.18 The NHS Standard Contract allows Prior Approval Schemes to be notified to a provider via its co-ordinating commissioner. These Schemes typically set out commissioner policies for a certain service or treatment (a high-cost drug, for instance, or a treatment of perceived limited clinical value). Further detail on Prior Approval Schemes is set out in paragraph 42.8-13 below. In the context of NCA, the key points to note are that
 - where a provider is operating on an NCA basis, under an implied contract with a particular ICB, that ICB may notify it of its own specific Prior Approval Schemes, and the provider must then comply with them; but the ICB cannot expect the provider to be aware of its Prior Approval Schemes without having notified it of them; and
 - a Prior Approval Scheme must not be used to restrict a patient's legal right of choice of provider.

Legal right of choice of provider

- 25.19 As signalled in the 2023/24 version of this Guidance, revised draft regulations relating to patient choice, including patients' rights to choose their provider have now been published <u>the National Health Service Commissioning Board and Clinical Commissioning Groups (Responsibilities and Standing Rules)</u> (Amendment) (No. 2) Regulations 2023. Subject to Parliamentary approval, the new regulations will come into effect on 1 January 2024, alongside those which establish the new NHS Provider Selection Regime (see paragraph 15 above). At the same time, the National Health Service (Procurement, Patient Choice and Competition) (No. 2) Regulations 2013 (which form part of the current "choice" regime) will be revoked.
- 25.20 NHS England will publish updated guidance in due course, providing advice on the new regulations and describing how it will support commissioners to ensure compliance with them.
- 25.21 Commissioners and providers should refer to this updated guidance once available, but the basic principles are expected to remain the same as previous policy in this area.
 - Commissioners (ICBs and NHS England) must ensure that when a GP, dentist or optometrist makes an elective referral for a first outpatient appointment to a service led (for physical health) by a consultant or (for mental health) by a consultant or other mental health care professional, the patient can choose from any clinically appropriate health service provider which has a contract with a commissioner for the particular service required. The judgement on the clinical appropriateness of the referral is for the referring clinician to make.
 - The Contract therefore continues to include provisions at SC6.13 (SC6.2 in the shorter-form version) which require that providers must accept all referrals / presentations which give effect to a patient's legal right of choice (or which are for emergency treatment) even where the patient's responsible commissioner is not a direct party to the provider's contract. SC6.14 (SC6.3 in the shorter-

form) then makes clear that, in other circumstances, a provider has no entitlement to be paid for providing services to patients whose responsible commissioner is not a party to the contract.

- For the legal right of choice to apply to a particular service under the Standing Rules, the provider must have been commissioned to provide that service by at least one ICB. But this legal right of choice only applies to the service <u>as</u> <u>commissioned</u> – that is, on the basis specified in the provider's contract with the first ICB. So if the provider has a contract for service X to be provided in location A, that of itself does not allow that provider, on a non-contract activity basis, to open a new facility and offer service X in location B, a hundred miles away. Neither does it of itself allow that provider, on a non-contract activity basis, to offer service Y in location A or in location B. <u>SC6.14 (SC6.3 in the</u> <u>shorter-form)</u> makes this explicit. (See paragraph 36.5 below for advice on recording service delivery locations within specifications.)
- 25.22 Detailed enquiries on the operation of patient choice and the relevant regulations can be sent to <u>england.choice@nhs.net</u>.

26 Promoting collaboration and contracting for integrated services

- 26.1 The principle that different providers should collaborate more closely with each other, providing their services in an integrated way to best meet the needs of patients, has been a key driver in the move towards NHS system working over several years and new statutory arrangements have now of course been established by the Health and Care Act 2022. <u>Contractual</u> models for driving better integration of services continue to have relevance, though, and this section describes some of the available approaches. (Note that the proposed use of complex or novel contractual models for integration may trigger a requirement to undergo an <u>NHS England assurance process</u>.)
- 26.2 At the simplest level, in situations where it is important for different providers to join up their individual services around patients' needs, commissioners can specify in the separate contracts with each provider what is required of each in terms of its interaction and interface with one or more other providers. This can be a means of ensuring that referral or transfer from one provider to another happens smoothly, for instance, with no confusion as to who is responsible for what or of avoiding wasteful duplication. Service specifications and referral processes can be aligned and dovetailed with each other, and payment and incentive regimes across contracts can be aligned and directed towards what is best for the patient group served by the providers collectively.

Contracting for integrated primary and secondary care

26.3 If a commissioner wishes to place a single contract for integrated secondary and primary medical care services, it may do so using the NHS Standard Contract with the addition of Schedule 2L (Provisions Applicable to Primary Medical Services). This schedule introduces the further provisions required in order to make the Contract compliant with the Alternative Provider Medical Services (APMS) directions. With this addition, the Contract will be both an NHS Standard Contract

and an <u>APMS contract</u>. A template form of those further provisions, for inclusion in Schedule 2L where appropriate, is available on the <u>NHS Standard Contract</u> <u>2024/25 webpage</u>, along with guidance about their use.

26.4 The APMS-compliant version of the NHS Standard Contract (i.e. one including template APMS provisions) is likely to be useful where, for instance, a commissioner wishes to commission an integrated NHS 111 and out-of-hours primary medical service from the same provider under a single contract.

Lead provider and alliancing models

- 26.5 The NHS Standard Contract can readily be used as a <u>"lead" or "prime" contract</u>. Under this model, the commissioners enter into a contract with a single lead provider / prime contractor. That contract allocates risk and reward as between the commissioner and the prime contractor. The prime contractor then subcontracts specific roles and responsibilities (and allocates risk associated with their performance) to other providers. The prime contractor remains responsible to the commissioners for the delivery of the entire service, and for the co-ordination of its 'supply chain' (i.e. its sub-contractor providers) in order to ensure that it can and does deliver that entire service. The prime contractor is likely to be a provider of clinical services itself, but it could sub-contract all but the co-ordination role. The optional schedule of primary care provisions (see paragraph 26.3 above) enables the Contract to be used as a prime or lead contract under which a package of primary and secondary care services may be commissioned.
- 26.6 The fact that one provider assumes the role of prime or lead contractor, and therefore takes the lead in terms of accountability to and communication with the commissioners, need not mean that the other providers involved in delivery of the service are entirely subservient to the prime contractor. A prime contract and the sub-contracts to it can be underpinned by an agreement (similar in many respects to the alliance agreement mentioned below) between all of the providers, which sets out how they are all to be involved in decision-making and in determining how services are to be provided and resources allocated between them.
- 26.7 An alternative to a prime or lead provider model is an alliance approach, under which multiple contractors are bound together to pursue shared aims and objectives. The key characteristics of <u>alliance contracting</u> are said to be alignment of objectives and incentives amongst providers; sharing of risks; success being judged on the performance of all, with collective accountability; contracting for outcomes; and an expectation of innovation. Some forms of alliance contracting are not currently compatible with the NHS Standard Contract, specifically where multiple providers are signatories to a single commissioning contract but the key characteristics of alliance contracting can be accommodated in a structure involving one or more NHS Standard Contracts (and, where appropriate, other forms of commissioning contract). We have published on <u>FutureNHS</u> a model Alliance Agreement and supporting materials which commissioners may use as a starting point for development of their own alliancing arrangements with providers.
- 26.8 If you would like to discuss any of these approaches, please contact us via england.contractsengagement@nhs.net.

27 Use of the Contract for call-off arrangements

- 27.1 We know that many commissioners have successfully used the Contract in the context of a framework for, for example, care home placements. One way of doing this is where an NHS Standard Contract is entered into with each provider appointed to the framework, with processes for "call-off" of activity set out in Schedule 2A and prices/day rates for activity (perhaps based on a needs assessment) set out in Schedule 3C. The Commissioner then raises a purchase order (PO) or individual placement agreement (IPA) for each placement, and the PO or IPA references the Contract which is in place between the parties. (To be clear, a PO or IPA may only be used when there is an NHS Standard Contract in place with the provider; they must not be used in isolation.) Either the full-length or the shorter-form version would be fit for purpose in this context but, as noted above, the same form of contract must be used with each provider appointed under a framework procurement. A model IPA is available on the <u>NHS Standard Contract web page</u>.
- 27.2 The Increasing Capacity Framework, established by NHS England for a range of elective services, works a little differently and provides for either NHS Standard Contracts to be awarded by ICBs or NHS England, or for sub-contracts to be awarded by Trusts, to providers which have entered into a Framework Agreement with NHS England. Further details are available on the Increasing Capacity Framework web site and from increasingcapacityframework@nhs.net.
- 27.3 We strongly recommend that commissioners take legal advice if considering their own framework procurement.

28 Contracting approaches to support personalised care

Universal Personalised Care

- 28.1 Ensuring that patients receive personalised care tailored to their individual needs is at the heart of the NHS Long Term Plan, and NHS England has published a detailed programme for the development of more personalised approaches (Universal Personalised Care: Implementing the Comprehensive Model).
- 28.2 The Contract includes provision for inclusion of a Development Plan for Personalised Care at Schedule 2M. This can be used to set out actions which the commissioner and provider will take to give patients greater choice and control over the way in which their care is delivered. This is an optional schedule, but its use will be appropriate in many local contracts and is strongly encouraged. Updated advice on completion of the schedule is included in the Particulars.

Personal health budgets

28.3 Personal health budgets (PHBs) are one important tool in the delivery of personalised care. General information regarding PHBs is available at <u>https://www.england.nhs.uk/personal-health-budgets/</u>. Under current legislation, certain patient groups have a legal right to a PHB, and commissioners and providers should ensure that, as a minimum, these rights are upheld and promoted. Legal rights to have a PHB are currently in place for:

- adults eligible for NHS Continuing Healthcare and children / young people eligible for continuing care;
- people eligible for NHS wheelchair services; and
- people who require aftercare services under section 117 of the Mental Health Act.

Schedule 2M can be used to set out plans and operational arrangements for the implementation of PHBs.

- 28.4 The guidelines below are intended to help commissioners determine the appropriate contracting model for each of the three options of managing a PHB, but commissioners will need to exercise local discretion and common sense to ensure that a proportionate approach is adopted.
 - Notional budget. Where an NHS commissioning organisation itself commissions healthcare services funded by a PHB on behalf of an individual (a notional budget), use of the NHS Standard Contract is likely to be appropriate. Individuals' needs will be established through the care and support planning process, and the commissioner may need to contract with a provider to provide part or all of a package of care for one individual patient or for a number of patients, funded from a PHB in each case. The contract should reflect how the needs of each individual patient will be met from his/her PHB. Individual care packages can be handled within the contract as set out at paragraph 12.3 above.
 - Third party. Where a PHB is being managed by a third party independent of the commissioner, (for example where the third party is a trust fund set up on behalf of the individual), the commissioner will contract with the third party organisation to organise, purchase and be responsible for, the patient's care and support. In these instances, it may be appropriate to use the NHS Standard Contract to govern the relationship between the commissioner and the third party organisation managing the PHB, but the commissioner should consider on a case by case basis what approach to take. When the third party purchases the services and products on behalf of the individual as agreed in their care and support plan, the NHS Standard Contract should not be used.
 - **Direct payment.** Where a commissioner makes a direct payment to an individual (or their representative or nominee) who then holds the PHB and contracts directly with a provider, the individual (or their representative or nominee) will not need to use the NHS Standard Contract, nor is there a need for a contract between the commissioner and the provider. The care and support plan, which is an agreement between the ICB and the individual, will set out the details of the needs to be met and the outcomes to be achieved by the services to be provided.
- 28.5 PHBs may in some cases be spent on non-clinical services or items not routinely commissioned by the NHS. Where this is the case, under the notional budget or third party options, use of the NHS Standard Contract is not appropriate; rather, the commissioner will wish to use the <u>NHS terms and conditions for the procurement of goods and non-clinical services</u>.

28.6 Funding for PHBs should not be about new money but money that would have been spent on that person's care using already commissioned NHS services. However, the funding that could be offered as a PHB may often be included in existing contracts, with many of these operating on a block basis. It is therefore important to ensure that both a clear strategic direction and relevant processes are in place to enable the freeing-up of funding for PHBs. From a contracting perspective, this can be addressed through agreement of appropriate local provisions in Schedule 2M (whether negotiated annually or through variations). Therefore, alongside the technical steps to establish PHBs, commissioners also need to work closely with providers to influence change and improve services in key areas so that they are more responsive to the needs of individual users. This should be set out clearly in the local offer for PHBs.

29 Contracting fairly

- 29.1 The contract is an agreement between the commissioner(s) and the provider. Once entered into, the contract is a key lever for commissioners in delivering highquality, safe and cost-effective services. However, the contract in isolation will not achieve this. An effective working relationship between commissioner(s) and provider is a key element of successful contracting. A key aim of the Health and Care Act 2022 is to promote local partnership working, and NHS England has published <u>guidance for ICBs</u> on governance and working arrangements.
- 29.2 An effective relationship is unlikely to be a cosy one in which the partners are hesitant to address difficult issues for fear of upsetting each other but nor will it be one where each party focusses, aggressively and continuously, on protecting what is perceives to be its own narrow, individual interests.
- 29.3 There is no perfect recipe, but an effective working relationship is more likely to be possible where commissioners and providers across a healthcare system:
 - have a shared vision for services, with the primary focus on what will produce the best outcomes for patients – but backed by a commitment to deal fairly with the consequences of this vision for individual organisations;
 - are open and transparent in sharing information, ensuring early communication of new or changed intentions, emerging problems or potential disputes;
 - take their contractual responsibilities seriously, but use contractual levers and processes in a reasonable and proportionate way; and
 - tackle difficult discussions about financial pressures in a way which focusses on actions which will genuinely remove cost or increase efficiency in the local health system as a whole, rather than producing short-term, opportunistic gains for one party at the expense of the other.
- 29.4 (This is the approach that is encapsulated in our model System Collaboration and Financial Management Agreement see paragraphs 4.5-6 above.)

30 Advice and support

- 30.1 If you have questions about this Guidance or the operation of the NHS Standard Contract in general, please contact <u>england.contractshelp@nhs.net</u>.
- 30.2 If you would like to be added to our stakeholder list to receive updates on the NHS Standard Contract, please email your contact details to england.contractsengagement@nhs.net.
- 30.3 We have a page on the FutureNHS platform, where we post slides packs from, and recordings of, different webinars we have run on contracting topics. See https://future.nhs.uk/NHS_Standard_Contract.
- 30.4 Other useful contacts are set out below.
 - Queries relating to *Who Pays?* can be sent to england.responsiblecommissioner@nhs.net
 - Queries about the NHS Payment Scheme can be sent to pricing@england.nhs.uk
 - Queries about the NHS Provider Selection Regime can be sent to psr.development@nhs.net
 - Queries about the NHS terms and conditions for the procurement of goods and non-clinical services can be sent to <u>england.commercialqueries@nhs.net</u>
 - Queries on patient choice can be sent to england.choice@nhs.net.
 - Queries on GP Contracts can be sent to england.gpcontracts@nhs.net

Section B Completing and using the Contract

31 Content of this section

- 31.1 The aim of this part of the Technical Guidance is to offer advice about both how key sections of the Contract should be completed and how the main contract management processes should be used in practice.
- 31.2 For each topic within this section, we highlight where specific changes have been made to the Contract for 2024/25. Please refer also to Appendix 1, which goes through the different elements of the Particulars on a line-by-line basis, describing what each is for and how each should be completed.
- 31.3 The Technical Guidance is written primarily with the more complex, full-length version of the Contract in mind. Where appropriate, at the start of each section, we highlight briefly any key considerations in relation to the shorter-form Contract.

32 Structure of the NHS Standard Contract

The **shorter-form Contract** uses the same three-part structure as the full-length version.

- 32.1 The Contract is divided into three parts.
 - **The Particulars.** These contain all the sections which require local input, including details of the parties to the contract, the service specifications and schedules relating to payment, quality and information.
 - **The Service Conditions.** This section contains the generic, system-wide clauses which relate to the delivery of services. Some of these apply only to particular services. The column in the right-hand margin identifies which clauses apply to which service categories; clauses which are not relevant in a particular contract should be "read over" (see paragraph 34 below).
 - **The General Conditions.** This section contains the fixed standard conditions which apply to all services and all types of provider, including mechanisms for contract management, generic legal requirements and defined terms.

33 Online presentation of the Contract

The same arrangements for online presentation apply to the **shorter-form Contract** as to the full-length version, as set out below.

- 33.1 The General Conditions and Service Conditions of the Contract no longer need to be exchanged between the local parties as part of their local agreement. Rather, the GCs and SCs will apply to local contracts in their up-to-date online form, as published by NHS England from time to time. Under the wording set out on page 7 of the Particulars, they are incorporated into, and apply automatically as part of, each local contract by reference only. The only element of the Contract to be exchanged between the parties locally is the Particulars, which set out the locally agreed elements.
- 33.2 There is thus no longer any requirement for the previous process for National Variations, through which the parties to a contract would update it when directed by NHS England to do so to introduce changes made periodically by NHS England to the national provisions. Instead, any changes published by NHS England to the GCs and SCs will apply automatically from the date of publication (or whatever later implementation date may be specified in the wording of the relevant GC/SC). If a provider no longer wishes to provide services on the basis of the updated national terms, it will continue to have the option to terminate its contract, on notice, on a "no fault" basis under GC17.
- 33.3 The points below should be noted in relation to the arrangements for online presentation.
 - The existing "order of precedence" within the Contract remains unchanged. As set out in GC1, the GCs take precedence over the SCs which in turn take precedence over the local content in the Particulars. So it is not possible for local parties to set aside or depart from the national provisions of the GCs and SCs by seeking to agree alternative wording in the Particulars, and any attempt to do so will be invalid.
 - NHS England will continue to consult formally on any proposed material changes to the Contract. <u>No material changes will be made without input from</u> <u>stakeholders, and no changes will be introduced without prior notice</u>. We envisage that the process for consultation and updating the Contract will remain annual, other than where there is an urgent need for an in-year change, as has been the case since 2013. There is no intention that the content of the Contract will become subject to rolling in-year updates.
 - We will continue to publicise proposed changes in advance, on our website, through national bulletins and via email to our stakeholder list. The outcome of every consultation will be confirmed in the same way, with updated Contract documentation published on the Contract webpages.
 - There is no need for commissioners to send "notice letters" to providers, informing them of changes to the national terms. Commissioners may choose, if they wish, to contact relevant providers to alert them to specific changes in

the national terms, but the onus will be on both commissioners and providers to keep themselves informed of the current terms.

- The current Particulars, GCs and SCs will always be published at <u>https://www.england.nhs.uk/nhs-standard-contract/</u>, but NHS England will also continue to publish previously applicable GCs and SCs, so that there is always an accurate, accessible record of which versions applied at which time.
- The Service Conditions continue to allow for "tailoring" of the applicability of Contract provisions <u>using service categories</u> (acute, mental health etc) to denote whether or not the clause applies to the contract in question. Contract clauses which are not relevant to a specific contract, because the provider does not provide the services to which those clauses apply, will simply be "read over" as not applicable. There is specific wording on page 9 of the Particulars making this clear ("Note that certain provisions of the Service Conditions and Annex A to the Service Conditions apply in respect of some service categories but not others"). See paragraph 34 below for further detail on Service Categories.
- Other aspects of "tailoring" (for example, where a provision applies only to a provider which is a Trust and not to other providers) are now dealt with through the actual Contract text, rather than through the "applicability" column in the SCs.

34 Service categories

Within the **shorter-form Contract**, there is much less tailoring of the applicability of the Service Conditions and Particulars through the use of service categories.

- 34.1 The service specifications (set out in Schedule 2A) describe the full detail of the services the provider is required to offer. The service categories, listed in the Particulars, are broad descriptions of different types of services; as set out above, their sole purpose in the contract is to determine whether or not certain provisions within the Particulars and, especially, the Service Conditions apply to a specific contract.
- 34.2 For this reason, the service categories are not an exhaustive list of all the possible types of service. Rather, the list reflects the way in which the content of contracts can be tailored to reflect the nature of the service being provided.
- 34.3 When completing the contract documentation, commissioners should tick as many of the service categories as are relevant to the specific contract. There is inevitably some imprecision with the categories; if in doubt, tick all of those that could potentially apply. Contract clauses which are not relevant to a specific provider, because it does not provide the services to which those clauses apply, will simply be "read over" as not applicable. There is specific wording on page 9 of the Particulars making this clear ("Note that certain provisions of the Service Conditions and Annex A to the Service Conditions apply in respect of some service categories but not others").

- 34.4 A number of points should be noted in relation to the Community Services category.
 - It is aimed at <u>out-of-hospital</u> services which could be provided by NHS Trusts, independent and voluntary providers, GPs or optometrists.
 - If a provider of community services also runs community hospitals with inpatient beds, and acute contractual provisions are relevant, then the commissioner may also wish to tick the Acute Services category.
 - Where primary medical services (for example, GP out-of-hours services) are being commissioned under an NHS Standard Contract as part of a package of services, these should also be considered as within the Community Services category, but Schedule 2L (see paragraph 26.3 above) must also be included to make the contract compliant with APMS regulations (and in these circumstances the full-length Contract must be used).
 - Under both the full-length and shorter-form versions of the Contract, the RTT 18-week-wait requirements now also apply to the Community Services category. This does <u>not</u> mean that the RTT requirements apply to <u>all</u> community services just to the small number of consultant-led elective services which are provided in community settings. See the <u>RTT Rules Suite</u> for full definitions.
- 34.5 The Contract continues to include a Service Category for patient transport services (PT). In this context, however, note our guidance (set out at paragraph 7.4 above) that, where a package of services being commissioned includes transport services within scope of CQC registration, the NHS Standard Contract must be used but that a package of transport services outside the scope of registration should not be commissioned using the NHS Standard Contract.
- 34.6 Note that, for 2024/25, we have discontinued the separate Radiotherapy Services category. As a result of the changes to national cancer waiting times standards described in paragraph 3.6 above, there is no longer a separate standard for access to radiotherapy services, and there are no other Contract provisions which apply only to providers of radiotherapy services only. We have renamed the Cancer Services category to read "Cancer Services including Radiotherapy" for 2024/25.

35 Contracts for new services or with new providers

The **shorter-form Contract** allows for Conditions Precedent to be recorded but does not make specific provision for Transitional Arrangements. These may be included in Schedule 2G (Other Local Agreements, Policies and Procedures) if required.

35.1 Completion of the relevant schedules of the Particulars is obviously a requirement for all contracts – but agreement of a contract with either a new provider or for a

new service is likely to mean a focus on certain aspects of the contract which are sometimes less critical where the contract is a renewal of an expiring contract with an existing provider for an existing service.

Conditions Precedent (Schedule 1A and GC4.1)

- 35.2 Conditions Precedent are things which the provider must do, and documents which it must provide, after contract signature, to establish to the satisfaction of the co-ordinating commissioner that it is ready and able to start providing the Services as required by the Contract. So they are necessary pre-conditions to the start of Services (and <u>not</u>, as is unfortunately sometimes assumed, a to-do list for later, once Services are already up and running). Those listed in Schedule 1A of the Standard Contract without square brackets will apply in all cases. Those in square brackets will apply in many, if not most, cases. Additional Conditions Precedent required by commissioners may relate to, for example, works to premises being completed, equipment being safely installed and operational, and/or appropriate staff being in post and fully inducted. These additional requirements will need to be agreed locally and will differ according to local circumstances.
- 35.3 While the commissioner will wish to have sight of documents referenced in Conditions Precedent (e.g. CQC registrations, the provider licence etc), the documents do not need to be included in the contract itself.
- 35.4 The general rule is that each Condition Precedent must be satisfied by the Expected Service Commencement Date. If any Conditions Precedent have not been satisfied by the stated Longstop Date (a date after the Expected Service Commencement Date, which allows for an acceptable amount of "slippage"), the co-ordinating commissioner may terminate the Contract.
- 35.5 There may be circumstances in which it is appropriate to fix a Longstop Date for satisfaction of certain Conditions Precedent as a date <u>before</u> the Expected Service Commencement Date for example, if there are staged tests or gateways which the provider must pass in order to establish its readiness to deliver the Services. By fixing such an early Longstop Date, the co-ordinating commissioner is given the ability to terminate the Contract before the Expected Service Commencement Date has passed, once it becomes apparent that the Provider has not passed early tests and so is incapable of getting itself into a position to provide the Services. But this type of arrangement will be the exception, not the rule.
- 35.6 It is important to note that the Longstop Date is <u>not</u> a contractual means of allowing a contract to be signed with various contentious issues parked for resolution by a later date. Commissioners and the provider must make their own individual judgements about whether a contract contains an acceptable package which they are prepared to sign and be bound by. They may each be prepared to note that some non-material issues are not yet agreed at the point of signature (the content of lesser schedules, for instance), with the expectation that these will be incorporated into the contract at a later stage, once agreed, through a variation. But it is very unwise to sign a contract with material issues unresolved. Indeed, unless key elements, such as service specifications and financial terms, are agreed, there will be uncertainty as to whether a contract has been created at all.

35.7 Note that Schedule 1B may be used to set out details of any documents which the commissioners are to provide to the Provider before the Expected Service Commencement Date. These may include, for example, records and other documents which are to be obtained from a previous provider of the services.

Transition Arrangements (Schedule 2H and GC4.4 – full-length Contract only)

35.8 The parties may set out in Schedule 2H actions which each must take (and/or, in the case of the commissioners, which they must ensure that the outgoing provider of the Services must take) in order to ensure continuity of service and to effect an orderly transition of provision from the outgoing provider to the new provider, and/or from the old service model to the new. These might cover arrangements in relation to the transfer of staff (linking to GC5.14 (TUPE) (Schedule 8 in the shorter-form Contract)), the transfer of premises and equipment, transfer of care of Service Users, transfer of patient records, and so on. Clearly, there may be overlap between Schedule 1A and Schedule 2H, and it may be appropriate to specify completion of actions on the part of the provider under Transition Arrangements as a Condition Precedent, in order to ensure that the right to terminate the Contract applies if the provider fails to complete those actions. (If using the shorter-form Contract, transition arrangements may be set out in Schedule 2G (Other Local Agreements, Policies and Procedures) if required).

Contractual processes carried forward from previous contracts

- 35.9 Where an existing contract is about to expire and the commissioner is intending to enter a new contract with the same provider, questions arise about what happens to contractual processes unfinished during the previous contract (a Remedial Action Plan or an Activity Management Plan, for instance).
- 35.10 Commissioners can, of course, minimise the impact of this issue by entering into multi-year contracts, so that the contractual process automatically carries forward from one Contract Year to the next, until the contract expires.
- 35.11 However, at the end of a contract of any length, unless commissioners take appropriate action, the default position will be that contractual processes begun under that contract will not automatically be carried forward to a new contract. Rather, the contractual process will have to re-start from the beginning.
- 35.12 This issue can be addressed by the inclusion of the Plan agreed under the expiring contract within a Service Development and Improvement Plan under the new contract. In this situation, a commissioner may wish to treat the agreement of that Service Development and Improvement Plan as a Condition Precedent for the purposes of the new contract (in other words, that agreement of the continuing application of the Plan is a pre-requisite of the new Contract). Where, under an expiring contract, a commissioner has reached the stage of withholding or retaining funding in respect of a provider failure (under GC9 for example), the commissioner may also seek to specify in the Service Development and Improvement Plan to be included in the new contract that withholding or retention of funding will continue under the new contract, until such point as the original failure is rectified.

36 Service specifications

A specification for the services to be provided should always be included within the **shorter-form Contract** at Schedule 2A. There is no mandated format for a specification, but commissioners should ensure that each specification clearly sets out, as a minimum, the service to be provided, the population and geography to be covered, where the service is to be provided and other key requirements.

- 36.1 The service specifications are one of the most important parts of the contract, as they describe the services being commissioned and can, therefore, be used to hold the provider to account for the delivery of the services, as specified.
- 36.2 Service specifications are recorded in Schedule 2A of the Particulars; a nonmandatory model template for local determination and population is provided there. The template is a streamlined one, enabling specifications in contracts to be less restrictive and input-driven where desired, with more scope for the provider to adapt and refine over time how services are best delivered to meet the commissioner's long-term objectives and desired outcomes.
- 36.3 The way in which service specifications are developed will vary according to local circumstances. It is the commissioner's responsibility to develop service specifications. However, the commissioner may, subject to procurement advice, wish to involve prospective providers in developing a specification. A high level of clinical engagement is essential, and it is good practice to involve service users in the development of specifications wherever possible.
- 36.4 The specification template is intended as a guide, and the sub-headings are intended to act as suggestions. It is possible to add additional sections to the specification, if required. Commissioners may retain this structure, they may add additional sections, or they may determine their own. Where a commissioner chooses to determine their own structure, the guidance below is still relevant.
- 36.5 Considerations in completing the streamlined template are set out below.

Service name	Use this as your shorthand description of this particular service or bundle of Services	
Service specification number	Use this to give this particular specification a unique reference number	
Population / geography to be served	Use this to define the population for whom the Service is to be provided and/or the geographical area which it is to cover	
Service aims and desired outcomes	 Use this to describe the overall aims of the Service and the outcomes you want it to achieve or to contribute towards. Outcomes can be for the population served as a whole or for individuals accessing specific Services. They can relate to specific improvements in health delivered through the health Services being provided, overall 	

	 improvements in population health status or narrowing of inequalities in health between different sub-populations. The NHS Outcomes Framework will be a useful point of reference. Be sure to describe aims and outcomes which can be realistically achieved over the duration of the contract. If your contract has a one-year term, don't include outcomes which will take ten years to deliver. Be clear whether you are expecting the Provider to deliver specific outcomes which are fully within its own control – or to help make progress towards broader outcomes which will require action by multiple organisations to achieve.
Service description and location	Use this to describe, in an appropriate level of detail, the Service which is to be provided. A specification should not be a detailed operational policy for a service.
	It is important to cover, at least:
	 the nature of the Service to be provided (that is, a clinical description); and
	 the locations from which the Service is to be provided (or criteria for how accessible such locations must be for Service Users).
	In terms of specific locations for service delivery, you should only list those locations which you (and any other commissioners with whom you are collaborating under paragraph 13 above) have commissioned to meet the needs of your local population(s) and which you have satisfied yourself, through your usual assurance process, are suitable for the provision of high-quality and effective
	services. Beyond this, you may wish to consider:
	 specifying hours of operation and/or levels of service capacity;
	 what specific standards or guidance, relevant to the particular Service (and over and above those referenced in the General Conditions and Service Conditions), the Provider must comply with or have regard to – noting that specific Quality Requirements which the provider is required to achieve and report to the commissioner against should be set out separately in Schedule 4 (Local Quality
	 Requirements) and Schedule 6A (Reporting Requirements), cross-referencing the relevant service specification; how the Provider will tailor the services to individual Service Users' needs (adding service-specific detail to any general requirements on personalised care in Schedule 2M); and how this Service fits into the wider care pathway for the
	 Service Users affected – showing how it links to other services / providers and describing any referral / treatment protocols under SC29 (including any applicable clinical criteria / exclusions) and linking to transfer / discharge processes in Schedule 2J. Remember to strike the right balance between detail and flexibility. Try to ensure that the specification is precise enough so that the

Provider must seek the Commissioner's permission, through a
Variation, to make really material changes (including as a minimum
those which would trigger a requirement for public consultation, for
instance) – but, otherwise, leaves adequate scope for the way the
Provider organises the services to evolve, so as best to deliver the
desired aims and outcomes.

Other points about specifications

- 36.6 Commissioners should avoid replicating, in the service specification, wording or clauses which already appear in the General or Service Conditions or, worse, setting out requirements in a service specification which contradict the content of the General or Service Conditions, or re-state such content in slightly different language. Doing so will simply cause confusion and, potentially, disputes. (Note that, in the case of conflict or inconsistency, the Contract makes clear, at GC1.2, that the provisions in the General and Service Conditions will take precedence over the content of the Particulars, including any detail within a service specification.) However, commissioners should ensure that, within their service specifications, they use correct contract terminology listed in the Definitions in the General Conditions (for example, 'Service User' rather than 'patient').
- 36.7 Where the provider is to play a part in local delivery of the Enhanced Health in Care Homes and/or Primary and Community Mental Health Services care models, in collaboration with local Primary Care Networks, the service specifications templates at Schedule 2Ai and/or ii should be included, as appropriate, and completed / supplemented locally as required.
- 36.8 Where the commissioning of services is the responsibility of NHS England (including where commissioning functions have been, or are in future, delegated by NHS England to ICBs), there will often be one national service specification for the particular service, which has been designed with clinical input and signed off at national level. For specialised services, for instance, the Contract mandates that national specifications must be used.
- 36.9 The <u>Commissioning Framework and the National Urgent and Emergency</u> <u>Ambulance Services Specification</u> supports system leaders in reducing unwarranted variation in the way ambulance services are provided and commissioned and is strongly recommended for use by ICBs when commissioning regional ambulance services.
- 36.10 NHS England has also produced guidance on commissioning, contracting and core standards for non-emergency patient transport services (NEPTS); this is available here on FutureNHS. (See also paragraphs 7.4 and 34.5 above on the use of the NHS Standard Contract for the commissioning of NEPTS.) NHS England has also published <u>NEPTS eligibility criteria</u>, and ICBs and local partners should have regard to these criteria when commissioning NEPTS.
- 36.11 <u>Clinical Service Accreditation</u> is the national, patient-focused and professionallyled accreditation and quality improvement framework supported by the Healthcare Quality Improvement Partnership. CQC recognises a wide range of accreditation schemes in the acute and mental health sectors (see the <u>list published by CQC</u>); where a provider is accredited, that informs and in some cases reduces CQC

inspection activity. Commissioners may wish to include, in service specifications, requirements on providers either that they are successfully accredited for a specific service from the outset or that they must achieve accreditation by a particular date.

36.12 A service specification included in a local contract may be supplemented by one or more specific Individual Placement Agreements (IPAs). Where, for instance, a Commissioner has commissioned a care home Provider to provide NHS CHC packages of varying complexity, then an IPA can be used to record agreement to the placement of an individual and can describe the care package that individual is to receive and the price payable. The IPA should be exchanged between the parties and signed separately. NHS England publishes a model IPA which can be used for this purpose.

37 Commissioner Requested Services / Hard To Replace Providers

The arrangements for CRS and Hard To Replace Providers in the **shorter**form Contract are identical to those in the full-length version.

- 37.1 NHS Trusts have now been brought within scope of the NHS Provider Licence and the <u>Commissioner Requested Services (CRS) regime</u>, alongside NHS Foundation Trusts and non-NHS providers. We have therefore deleted, for 2024/25, the Contract provisions relating to Essential Services. These applied to NHS Trusts only and created a contractual arrangement which was broadly equivalent to CRS – but this is now no longer required.
- 37.2 The Contract continues to refer in SC5 to the CRS regime, under which the provision of services can be protected where the continued availability of those services is regarded as essential.
- 37.3 <u>National guidance</u> sets out how services can potentially be designated as CRS where there is no alternative provider close enough, where removing them would increase health inequalities, or where removing them would make other related services unviable. The guidance sets out a detailed process for designation, including a right of providers to appeal against the commissioner's assessment. Commissioners should submit any new designation decisions via <u>nhsi.crs@nhs.net</u>.
- 37.4 The Contract requires both parties to comply with the respective obligations under CRS Guidance, but any potential regulatory interventions under the guidance would not come within the remit of the contractual arrangements between the parties. There is no requirement for decisions on CRS designation to be listed in their local contracts.
- 37.5 SC5 now includes a new requirement for providers to comply with their obligations under the Provider Licence in relation to NHSE's new <u>Hard To Replace Provider</u> regime. Under this regime, NHSE may designate certain providers as "hard to replace" – on the basis that the provider's services are of sufficient scale or

complexity nationally or regionally that NHSE considers that their unavailability – due to the provider's insolvency or quality issues – would impact on patients. The 'hard to replace' regime enables NHSE to apply the Continuity of Service licence conditions of a provider's licence, irrespective of whether any individual commissioner has chosen to designate that provider's services as CRS.

- 37.6 Under the Contract,
 - any party proposing a Variation must have regard to the impact of the proposed Variation on other Services, in particular any CRS or on the designation of the provider as a Hard To Replace Provider (GC13); and
 - the provider must ensure that, when Services are suspended or terminated, there is no interruption in the availability of CRS (GC16 and 18).
- 37.7 Commissioners should ensure that they make very clear their requirements in respect of designation of CRS in procurement documentation and in pre-contract discussions with providers.

38 Assignment, novation and sub-contracting

The provisions relating to assignment, novation and sub-contracting in the shorter-form Contract are very much shorter than those in the full-length version, and there is no expectation that sub-contractors will be recorded within a schedule to the Particulars. Our expectation is that sub-contracting of material elements of the services will typically not be a feature of the type of commissioning arrangements which are to be governed by the shorter-form Contract, and so more detailed provisions are not necessary. But the basic position remains that the Provider may not assign, novate or sub-contract without the co-ordinating commissioner's prior written approval and that the Provider remains liable to the Commissioners for the acts and omissions of its sub-contractors.

- 38.1 GC12 governs assignment, novation and sub-contracting.
- 38.2 There may be circumstances where the provider wants another party to take over as provider under the contract – for example, if the provider is a company and is selling its business and assets to another company. GC12 states that the provider cannot assign or novate any of its rights or obligations under the Contract without the prior written approval of the co-ordinating commissioner. (This situation may be contrasted with the sale of shares in a provider company, to which the Change in Control provisions at GC24 apply.) An assignment and a novation are slightly different things in legal terms. An assignment of a contract by a provider will not release that provider from its obligations under the contract. A novation, on the other hand, will effectively cancel the original contract and replace it with a new one between the commissioner(s) and the new provider. Either may have material implications under the Public Contract Regulations or the new Provider Selection Regime. Either will need to be appropriately legally documented. If approached by a provider for consent to an assignment or novation, commissioners should, before giving consent or even considering doing so:

- ask the provider to give them as much information as possible about the proposed transaction, including the reason for it, the parties involved, and the experience and capability of the proposed new provider;
- explain to the provider that the commissioners will need to take legal advice on the request, any procurement implications, and any documentation related to the assignment or novation;
- require the provider to confirm that it will cover the commissioners' costs (including legal costs) in relation to the application for consent and all matters connected with it; and
- take legal advice, as above, and proceed in accordance with that advice.
- 38.3 We are aware that there can be confusion about the extent to which commissioners should be involved in decisions around sub-contracting, and guidance on this is therefore set out below.
- 38.4 The provider is wholly responsible to the commissioners for the delivery of the services and for the performance of all of the obligations on its part under the contract. The default assumption is that the provider will actually provide the services, and everything required in order to deliver those services in accordance with the contract, itself. However, in practice, most providers will wish to or need to sub-contract elements of the services, or contributions towards their delivery, to others.
- 38.5 What do we mean by a sub-contract? For the purposes of the Contract, a subcontract is defined very broadly: it is any contract entered into by the provider or by any sub-contractor for the purpose of the performance of any of the provider's obligations under the contract. So that would include contracts entered into by the provider or by its sub-contractors with providers of clinical services (often known as "provider-to-provider" contracts), clinical support services, goods and equipment on which the provider or the sub-contract relies in order to be able to deliver the services in accordance with the contract entered into with the commissioners.
- 38.6 It is important for both commissioners and providers to recognise that subcontracting in no way relieves the provider from responsibility for delivery of the services and for the performance of all of the obligations on its part under the contract: failure on the part of a sub-contractor does not excuse the provider from its obligations to the commissioners.
- 38.7 Nevertheless, commissioners will have an interest in sub-contracting arrangements. Depending on the scope and nature of the service or contribution being sub-contracted, they will need a greater or lesser degree of assurance as to the identity, level of competence and experience of the sub-contractor and the terms on which it is being appointed. Overall, the level of scrutiny which any sub-contract requires from the commissioner should be in proportion to its materiality, in terms of its potential impact on patient care. Commissioners will need to strike a careful balance, aiming for an appropriate and manageable level of oversight and not for micro-management of operational detail.

- 38.8 GC12.1 states that the provider is not to sub-contract any of its obligations under the contract without the written approval of the co-ordinating commissioner. So the co-ordinating commissioner is able to exercise control over what, how and to whom the provider sub-contracts the performance of those obligations. The extent to which it does or should exercise that control in practice will, as suggested above, depend on the scope and nature of what is to be sub-contracted. It is important that commissioners and providers reach an understanding, in the context of their contract, as to when and how this control will be exercised. It may, for example, be readily agreed between the parties that the provider will be free to contract with suppliers of consumables and providers of support services such as catering and cleaning without seeking consent to each individual sub-contract: in effect a blanket consent is granted at the outset. On the other hand, who supplies particular consumables may, in the context of a particular commissioning contract, be very important to the commissioners, and they may therefore wish to exercise the right of approval over sub-contracts for those consumables. Providers should, however, always be mindful of the default position in the Contract, which is that sub-contracting without prior written approval is a breach of contract entitling the co-ordinating commissioner to terminate the contract if it chooses (see GC17.10.15).
- 38.9 GC12.4 allows the co-ordinating commissioner to designate a sub-contract as a Material Sub-Contract. "Material" in this context means that it relates to all or a significant and necessary element, or contribution towards, the delivery of a service. Materiality is not about the value of the sub-contract, or necessarily about whether or not the subject matter of the sub-contract is itself a clinical service; the key is the importance of the sub-contract and the sub-contractor to the delivery of the provider's services. If a sub-contract is designated by the commissioner as a Material Sub-Contract, specific controls will apply, governing its termination, variation or replacement (see GC12.5).
- 38.10 It is important that the co-ordinating commissioner makes it clear to the provider, before awarding a contract:
 - which (if any) proposed sub-contracts it considers to be Material Sub-Contracts (to be detailed in Schedule 5B);
 - which (if any) Material Sub-Contracts must be in place, in a form approved by the co-ordinating commissioner, at the point of contract award;
 - which (if any) Material Sub-Contracts must be in place, in a form approved by the co-ordinating commissioner, by the (relevant) Expected Service Commencement Date, as a pre-condition to the commencement of delivery of the Services (or the relevant Services) (to be detailed in Schedule 1A). (Note that it is possible to specify staggered Expected Service Commencement Dates for different Services, with conditions precedent attaching to each, if service commencement is to be phased.)

Form of sub-contract

38.11 It is for the provider to put the sub-contract in place, but the commissioner has the right to approve the terms of the sub-contract if it wishes. There is no mandated

form of sub-contract (see paragraph 38.16 below), but the NHS Standard Contract places a number of specific requirements on the main provider in relation to the conditions of any sub-contracts (see, for example, GC21.15-17 of the full-length Contract – requirements relating to patient confidentiality and data protection).

- 38.12 The NHS Standard Contract itself is not designed for use, and should not be used, as a sub-contract. One simple, practical example of why this is the case relates to the NHS Payment Scheme. The Standard Contract requires the commissioner to pay the provider in accordance with the NHS Payment Scheme (meaning the principles and rules set out in the current NHS Payment Scheme guidance) but no such requirement applies where a provider is paying a sub-contractor.
- 38.13 We have provided, at Appendix 3, some example scenarios illustrating which form of contract, sub-contract or other agreement should be used in different situations.
- 38.14 Where NHS providers are placing sub-contracts for goods and non-clinical services, they may appropriately use the standard <u>NHS terms and conditions</u> (queries on which may be directed to <u>england.commercialqueries@nhs.net</u>). Where the sub-contract is of a clinical service, the national terms and conditions for goods and non-clinical services will not be suitable.
- 38.15 NHS England produces model sub-contracts for use by providers for clinical service sub-contracting, for use with the full-length NHS Standard Contract and with the shorter form Contract. These model sub-contracts, which we refer to as NHS Standard sub-contracts, provide a systematic means of flowing down the relevant provisions from the provider's contract to the sub-contractor. These model sub-contracts will be updated in due course to reflect the 2024/25 Contract and republished on the <u>NHS Standard Contract 2024/25 webpage</u>. Note that we publish a version of the model sub-contract under which multiple head providers can place a single sub-contract with a chosen sub-contractor.
- 38.16 Use of the model sub-contract is not generally mandatory (but is mandatory when Trusts or FTs are awarding sub-contracts under the Increasing Capacity Framework on which see paragraph 27.2 above), but its use will save providers time and offer greater assurance to commissioners that robust sub-contracting arrangements are in place.
- 38.17 Where a provider does not use the national model sub-contract, it should ensure that the sub-contract it does put in place reflects the relevant elements and requirements of the NHS Standard Contract.
- 38.18 We are aware of some confusion concerning sub-contracting arrangements where GP practices, operating through Primary Care Networks (PCNs), seek to subcontract certain obligations under their primary medical care contracts to other providers such as Trusts. Use of the NHS Standard sub-contract is <u>not</u> appropriate in such cases; rather, NHS England has published a <u>sub-contract for</u> the provision of services related to the Network Contract Directed Enhanced <u>Service</u>, and this is the form of sub-contract which should be used (queries on its use can be directed to <u>england.gpcontracts@nhs.net</u>).
- 38.19 Many sub-contracting arrangements which providers propose, the reasons for them and their implications in terms of service delivery, indemnity arrangements

and so forth, will be straightforward and will not raise serious concerns for commissioners. But others may be more complex, especially where they relate to a provider's complex organisational arrangements (around parent and subsidiary companies, for instance) or raise issues around VAT applicability. If approached by a provider for consent to a sub-contracting arrangement in a complex case of this kind, commissioners should, before giving consent or even considering doing so:

- ask the provider to give them as much information as possible about the proposed sub-contractor and sub-contract, including the reason for it, the parties involved, and the experience and capability of the proposed subcontractor;
- explain to the provider that the commissioners may need to take legal advice on the request, and any documentation related to it;
- require the provider to confirm that it will cover the commissioners' costs (including legal costs) in relation to the application for consent and all matters connected with it; and
- seriously consider taking legal advice and proceed in accordance with advice given.

Management of sub-contracts

38.20 Management of the sub-contractor is the responsibility of the provider. The provider is responsible to the commissioner for all of the services, including any provided by sub-contractors. However, the co-ordinating commissioner does have powers to require the replacement of sub-contractors in specific situations, as set out in GC12.13 (full-length Contract).

39 Quality of care

The core requirements on providers in relation to the provision of safe and effective care are the same under the **shorter-form Contract** as in the fulllength version – but there are far fewer applicable national standards, less detail about specific national policy requirements and a greater reliance on the concept of "Good Practice" (as defined in the Contract). Contract management processes are generally abbreviated in the shorter form, but the provisions for service suspension or contract termination provide protection of commissioners in the event that a provider is providing unsafe or consistently low-quality services.

39.1 The National Quality Board defines high-quality care as care which is "safe, effective, providing a personalised experience, well-led, sustainable and equitable". In considering how quality is reflected in the contracting process, commissioners should take into account all of the dimensions of quality contained in this definition.

Using the Contract to manage quality of care - an overview

- 39.2 Ensuring that patients have access to a range of high-quality services is the core function of NHS commissioning. The Contract supports this by giving a robust framework through which a commissioner can set clear standards for a provider and hold it to account for the quality of care it (and any sub-contractors) delivers. The key elements of the Contract dealing with quality are summarised below.
 - The Contract requires providers to run services in line with recognised good clinical and healthcare practice, and providers must comply with national standards on quality of care – the NHS Constitution, for instance, the Fundamental Standards of Care regulations and the <u>CQC "quality statements"</u> (SC1).
 - The Contract sets clear requirements in respect of clinical staffing levels by reference to <u>National Quality Board quidance</u> (GC5, definition of Staffing Guidance). Providers must continually evaluate individual services by monitoring actual numbers and skill mix of clinical staff on duty against planned numbers and skill mix, on a shift-by-shift basis; they must carry out and publish detailed reviews of staffing levels, and their impact on quality of care, at least every twelve months; they must undertake quality impact assessments before making material changes to staffing levels; and they must implement a standard operating procedure for responding to day-to-day shortfalls in staff numbers.
 - The Contract requires providers to adhere to national guidance on specific service areas, such as infection control (SC21), safeguarding (SC32), end of life care (SC34) and the duty of candour (SC35).
 - The Contract sets specific national quality requirements which the provider must achieve in Annex A of the Service Conditions, with scope for additional local quality requirements (Schedule 4). Other national standards to be complied with are stated elsewhere in the SCs – <u>National Standards of</u> <u>Healthcare Cleanliness</u> in SC17 and <u>National Standards for Healthcare Food</u> <u>and Drink</u> in SC19, for instance.
 - In addition to these nationally mandated requirements, commissioners can describe appropriately detailed service requirements – whether in terms of outcomes, quality measures or inputs and processes – through locally designed service specifications (Schedule 2A).
 - The Contract requires the provider to put in place policies and procedures which will support high-quality care. Among these are the provisions on clinical audit and clinical outcome review programmes (GC15 and SC26), consent (SC9), patient, carer and staff involvement and surveys (SC10, SC12), complaints (SC16) and the response to patient safety incidents and Never Events (SC33).
 - The Contract requires the provider to demonstrate that it is continually reviewing and evaluating the services it provides, taking into account patient feedback, complaints and surveys and Patient Safety Incidents, and implementing improvements as a result (SC3).

- Finally, the Contract provides processes through which commissioners can intervene to ensure that high-quality care is delivered by requiring regular submission of monitoring information (SC28), agreeing Service Development and Improvement Plans (SC20), requiring Remedial Action Plans to address service deficiencies (GC9), and ultimately by suspending services temporarily (GC16) or terminating them permanently (GC17).
- 39.3 It is essential that commissioners use the tools within the Contract to set high standards for providers and to monitor service quality continually, alongside expenditure and activity levels and that they maintain a constant and close dialogue with providers about any issues relating to service quality. National Quality Board guidance on System Quality Groups and on Quality Risk Response and Escalation in Integrated Care Systems sets out how the different organisations (commissioners, regulators, providers, others) can be brought together locally to review service quality creating a joined-up approach which allows information about quality of care to be triangulated across different organisations.
- 39.4 Detailed guidance on reporting requirements and on the use of contract management processes is set out slightly later in this document. The remainder of this section focuses on specific quality aspects.

National Quality Requirements

39.5 These are set out in Annex A of the Service Conditions. As a general principle, all providers are expected to achieve all of the National Quality Requirements which relate to the commissioned services. Links to the detailed definitions for the National Quality Requirements are provided within Annex A of the Service Conditions.

Local Quality Requirements

- 39.6 Local Quality Requirements are to be included in Schedule 4 and are for local agreement. They should be clinically appropriate and realistically achievable. As a general rule, focussing on a small number of key indicators is likely to be more effective than requiring dozens of separate indicators to be monitored.
- 39.7 Schedule 4 provides a simple template for documenting Local Quality Requirements. The headings used are explained in the table below.

Quality Requirement	What is the specific standard the provider must achieve?
Threshold	This means the numeric measure of success – better than the threshold is satisfactory, worse than it is not
Method of Measurement	This describes how the provider's performance is going to be measured – what is the data source, what are the definitions?
Period over which the Requirement is to be achieved	Does the provider have to achieve this standard at all times, with zero tolerance of breaches? Or is the standard to achieve a certain minimum (%) level of

	performance over a month, or quarter or year?
Applicable Service Specification	Which Service(s) is this standard relevant to?

- 39.8 It is important for commissioners to bear in mind the burden which Local Quality Requirements may create for providers, in terms of service management and data collection and reporting. Commissioners must ensure that any Local Quality Requirements which they propose (and the associated Local Reporting Requirements) will really add value. Provisions are set out in SC28 to address this (see paragraph 43.6-7 below).
- 39.9 The Contract no longer makes provision for financial consequences to be applied where a provider breaches a Local Quality Requirement. See paragraph 40 below for further detail.
- 39.10 Commissioners should work closely with local Healthwatch representatives in the design and monitoring of Local Quality Requirements and in assessing the extent to which providers are implementing service improvements.
- 39.11 Note that the Getting It Right First Time programme publishes <u>standards</u> for a range of medical and surgical specialties; these will be a useful source of potential local quality requirements.

Patient Safety

- 39.12 Requirements relating to patient safety are set out in SC33. Requirements under the full-length version of the Contract are summarised below.
 - From 1 April 2024, all providers must comply with the <u>Patient Safety Incident</u> <u>Response Framework (PSIRF)</u>.
 - As part of compliance with PSIRF, each provider must agree with its coordinating commissioner a Patient Safety Incident Response Policy and a Patient Safety Incident Response Plan, as described in detail in PSIRF. These must be published on the provider's website.
 - Under PSIRF, each provider must
 - engage compassionately with affected patients, carers and staff following any patient safety incident;
 - respond in a proportionate way to such incidents, undertaking investigations where appropriate; and
 - ensure that improvements to services are implemented following responses to incidents.
 - The <u>Never Events Policy Framework</u> remains in force, and providers must continue to comply with it.
 - Providers must be able to report incidents via the <u>Learn from patient safety</u> <u>events service</u> and must provide information on incidents to the co-ordinating commissioner as agreed under Schedule 6A.

39.13 The shorter-form version of the Contract contains similar but briefer provisions.

Contract provisions relating to the primary / secondary care interface

- 39.14 The Contract has always contained requirements on secondary care providers relating to communication and engagement with primary care providers but this has become more important than ever in recent years, both to improve the convenience of care for patients and to ensure the most efficient use of clinical time. The Contract provisions have therefore been gradually strengthened over recent years.
- 39.15 A <u>summary of the Contract interface requirements</u>, for clinicians and managers, was published in 2017. In brief, they cover
 - referral, including the management of DNAs and onward (consultant-toconsultant) referrals (SC6, SC8 and SC29);
 - communication with primary care on discharge from hospital and following clinic attendance (SC11);
 - provision of medication following hospital admission or attendance, and use of shared care protocols (SC11);
 - provision of fit notes to patients (SC11); and
 - managing patient care and investigations and communicating with patients and dealing with their enquiries (SC12).
- 39.16 Implementation of these requirements remains patchy, resulting in sub-optimal services for patients and wasted resource in practices. The Contract therefore includes a requirement for the provider and the co-ordinating commissioner to undertake, by 30 September of each Contract Year, an assessment of the effectiveness of their interface working arrangements, to discuss their findings with the relevant Local Medical Committees and to agree and implement an action plan to address any deficiencies.
- 39.17 The importance of ensuring that the Contract requirements in this area are fully implemented at local level has recently been restated in the <u>Delivery plan for</u> recovering access to primary care.
- 39.18 Further detail on some of the interface requirements is set out below.

Referral, management of DNAs and onward referral

39.19 The NHS Standard Contract is not a vehicle which can place direct requirements on individual primary care clinicians, but it does require ICBs to do all that they reasonably can to ensure that GP referrals are made in accordance with agreed protocols, specifications and Prior Approval Schemes and via the NHS e-Referral Service, with the necessary personal and clinical information provided in the format approved by the Professional Record Standards Body (see <u>https://theprsb.org/standards/clinicalreferralinformation/</u>).

- 39.20 The requirement in relation to DNAs is sometimes misunderstood. SC6.12 requires the provider to operate and publish a Local Access Policy, which will, amongst other things, describe how the provider will manage situations where a patient does not attend a booked appointment. The key additional requirement, as set out in the definition of Local Access Policy in the General Conditions, is that this is done "ensuring that any decisions to discharge patients after nonattendance are made by clinicians in the light of the circumstances of individual Service Users and avoiding blanket policies which require automatic discharge to the GP following a non-attendance". Where providers automatically discharge all patients who do not attend a clinic appointment back to their GP, this can create inconvenience and delays for patients and cause significant additional work for practices in simply re-referring many of the patients. The Contract therefore requires that a provider's Local Access Policy must not involve blanket administrative policies under which all DNAs are automatically discharged; rather, any decisions to discharge are to be made by providers on the basis of clinical advice about the individual patient's circumstances. Note that a model local access policy has been published by NHS England on the Future NHS website; providers should review their existing policies and ensure that they are consistent with this model version.
- 39.21 The provisions on onward referral in SC8 have the similar aim of avoiding duplication of effort. In summary, SC8 enables onward referral by a secondary care clinician where:
 - the onward referral is directly related to the condition for which the original GP referral was made or which caused the emergency presentation (unless there is a specific local ICB policy in place requiring a specific approach for a particular care pathway); or
 - the patient has an immediate need for investigation or treatment (suspected cancer, for instance).

By contrast, SC8 does <u>not</u> permit a secondary care clinician to refer onwards where a patient's condition is non-urgent <u>and</u> where the condition for which the referral would be made is not directly related to the condition which caused the original GP referral or emergency presentation. In this situation, the Contract requires the clinician to refer back to the patient's GP. The Academy of Medical Royal Colleges has published <u>Clinical Guidance: Onward Referral</u>, which outlines clear principles for how to avoid unnecessary "doubling up" of referrals and help patients move more easily though the care system.

Discharge summaries, clinic letters and other communications to primary care

- 39.22 The Contract requirements have three aspects.
 - **Timing.** Discharge summaries following inpatient / daycase care and A&E attendance must be issued to general practice within 24 hours; clinic letters must be issued within seven days. (Note that this standard is not expressed in Operational Days, but normal calendar days.)
 - **Transmission.** Discharge summaries and clinic letters must be sent to general practice only by direct electronic transmission.

- Structure. To gain the full benefit from electronic transmission, discharge summaries and clinic letters must be constructed using coded data and standardised clinical headings, so that data can be automatically extracted into GP records. This must be done in accordance with the standards for structure and content set out by the Professional Record Standards Body at <u>https://theprsb.org/standards/</u>.
- 39.23 <u>Guidance</u> is available to support providers in implementing electronic discharge summaries and clinic letters, and further details on the structured approach to sharing clinical information are set out in the <u>Transfer of Care resource library</u>. NHS England has published separate <u>guidance</u> on the NHS Standard Contract requirements on discharge summaries and clinic letters and on interoperability of clinical IT systems. An Information Standard (<u>DAPB4042: Transfer of Care Acute Inpatient Discharge Standard</u>) requires electronic transmission to GPs of hospital discharge summaries following acute inpatient care.
- 39.24 Commissioners must support providers in resolving any issues about GP preparedness (in terms of IT systems) to receive electronic transmissions (see SC11.8). Commissioners should also take a reasonable and proportionate approach in managing performance against the electronic transmission requirements. The policy direction is clearly to ensure electronic transmission to all GPs, but commissioners may wish to focus first on ensuring that providers can transmit electronically to GPs within their local catchment area.
- 39.25 Note the following points.
 - A provider is not necessarily required to send a clinic letter to the GP after each individual clinic attendance this will depend on the individual clinical circumstances, as set out in SC11.7.
 - For discharges from care where the Service User has not been admitted to hospital or treated in A&E, there is no nationally mandated requirement for a discharge summary to be sent in all cases. Instead, SC11.6 allows an appropriate locally specified requirement, including content, format, method of delivery and timescale, to be agreed and set out in Schedule 2J (Transfer of and Discharge from Care Protocols).
 - We do not envisage that discharge summaries would ever be required from Patient Transport Services, and the wording of SC11.6 (SC11.3 in the shorterform Contract) reflects this.
 - 111 Services are subject to a separate requirement to send electronic Post Event Messages, rather than discharge summaries (SC11.6A).
- 39.26 Apart from the above provisions for transfer of or discharge from care and clinic attendance, the Contract does not set out other nationally mandated requirements for communication from the provider to the GP whilst a Service User is receiving ongoing care at that provider. But where a commissioner wishes to set out other local requirements for communication to GPs during a pathway of care (as opposed to at discharge), this can be done by using Schedule 2G (Other Local Agreements, Policies and Procedures).

Medication on discharge and following clinic attendance

- 39.27 The Contract requires the parties to have regard to high-level <u>national guidance on</u> <u>prescribing responsibilities</u>. The Contract also contains specific provisions relating to supply of medication to patients on discharge from inpatient or daycase care and following outpatient clinic attendance. We are aware that there is different practice around the country in respect of both issues. To be clear, the purpose of the measures in the Contract is, in summary, to set minimum requirements which all providers must meet. These are:
 - for discharge from inpatient or daycase care, a minimum of seven (calendar) days' supply; and
 - following clinic attendance, sufficient supply for a patient's immediate needs, at least up to the point where the clinic letter has reached the GP and the GP can then prescribe on an ongoing basis.

In each case, the Contract wording deliberately sets these as minimum requirements; if local practice and protocols require supply for a longer period, this must be honoured unless alternative local arrangements are agreed. Note that a new requirement has been added, requiring providers – when supplying medication to patients on discharge or in clinic or when recommending medications for GPs to supply – to have regard to guidance published by NHS England for GPs on conditions for which over-the-counter items should not routinely be prescribed and items which should not be routinely prescribed.

39.28 These nationally mandated requirements only cover medication. Clearly, hospitals may also supply dressings or appliances, and requirements in relation to these may be specified locally within Schedule 2J (Transfer of and Discharge from Care Protocols).

Contract provisions relating to research

- 39.29 SC26 of the full-length Contract contains provisions relating to research studies.
 - The Contract continues to place an overarching obligation on every provider of NHS-funded services to support research activity by assisting with the recruitment of suitable subjects (whether patients or staff) into properly-approved research studies (including where these are being conducted by a different organisation) (SC26.3).
 - The Contract does not require providers of healthcare services to participate in research studies and fund these from within the income they receive from commissioners. Rather, research studies will be set up with separate funding streams and with specific agreements in place between the research sponsor and the organisation carrying out / participating in the study.
 - However, the Contract does require that, for commercial contract research studies, any provider operating under the Contract wishing to conduct or participate in the study must (under SC26.4) do so in accordance with the National Directive on Commercial Contract Research Studies published jointly

by NIHR, HRA and NHS England (<u>current version</u> published in January 2022). (This provision will apply to the provider at organisational level, not to individual clinicians acting in a personal capacity as Chief Investigators for a multi-site study.)

- The intention of the new arrangements is to speed up the process for getting multi-site research projects under way, by adopting streamlined nationally-set processes, rather than relying on multiple separate time-consuming local negotiations.
- The Contract also requires (SC26.5) that providers conducting research studies must comply with <u>guidance from HRA and NIHR</u> on reporting the progress of research studies.
- Finally, the Contract continues to require (SC26.6) commissioners and providers to comply with their obligations under NHS Treatment Costs Guidance. This includes guidance on meeting excess treatment costs.

40 Financial sanctions and incentives

Automatic financial sanctions – applied to providers which breach national or local quality standards – no longer feature in either the full-length or **the shorter-form version of the Contract**.

Application of financial consequences ('sanctions')

- 40.1 For 2021/22 onwards, we removed from the Contract
 - the nationally mandated financial consequences (usually referred to as "sanctions"), applied by the commissioner to the provider for failure to achieve National Quality Requirements; and
 - the ability for financial sanctions to be included in relation to locally agreed quality standards.
- 40.2 We are conscious that commissioners may, in some cases, have used locally agreed sanctions as a way of building a "pay-for-performance" regime into a specific contract. Where a multi-year contract including locally agreed sanctions in Schedule 4 is in place with a provider and does not expire at 31 March 2024, the commissioner will be able, at its discretion, to retain those sanctions within the local contract for 2024/25.
- 40.3 For new contracts operating on the basis of Local Prices, commissioners wishing to build in financial incentives or a "pay-for-performance" regime can do so by setting out their approach in Schedule 3C.

41 The Service Development and Improvement Plan (SDIP)

The concept of a Service Development and Improvement Plan is not generally part of the **shorter-form Contract**. Under the shorter form, if the parties wish to record their agreement of a plan to address a specific service issue, they can include this in their local contract at Schedule 2G (Other Local Agreements, Policies and Procedures).

- 41.1 The Service Development and Improvement Plan (SDIP, Schedule 6C) allows the parties to record action which the provider will take, or which the parties will take jointly, to deliver specific improvements to the services commissioned.
- 41.2 SDIPs differ from Remedial Action Plans (RAPs) under GC9 (Contract Management). RAPs are put in place to rectify contractual breaches or performance failures, whereas an SDIP is generally about developing an aspect of the services beyond the currently agreed standard. (Note however that, where specific actions and consequences are set out in a RAP under a contract which is soon to expire, commissioners may opt to roll those requirements into an SDIP under the provider's new contract, to ensure that the matters agreed are not lost in the switch from one contract to the next). Once included in the Contract, commitments set out in SDIPs are contractually binding.
- 41.3 SDIPs are for local agreement between the parties. They should be underpinned by the <u>NHS IMPACT</u> approach to continuous improvement. SDIPs may be aimed at improving quality and outcomes, boosting productivity and efficiency, redesigning pathways and introducing innovative technologies.
- 41.4 Multiple SDIPs can be included within the same contract. SDIPs should be included in Schedule 6C at the point where the contract is signed or incorporated into the contract subsequently by a locally initiated Variation. Progress against the plan should be reviewed through the contract review process (GC8) and any issues addressed through the contract management process (GC9).
- 41.5 For 2024/25, there is one specific area in which we suggest that commissioners and relevant providers should consider an SDIP. This relates to the Paediatric Hearing Services Improvement Programme. A national review by the Newborn Hearing Screening Programme has found serious failings at a number of providers in relation to the diagnosis of babies with a permanent childhood hearing impairment. Problems identified included a lack of clinical governance and oversight, poor reporting of data, poor interpretation of results, poor retention of diagnostic data, and lack of accreditation with the UK Accreditation Service's Improving Quality in Physiological Services (IQIPS). The review found that only 25 out of 130 paediatric audiology services nationally have so far achieved IQIPS accreditation. The review has resulted in the establishment of the Paediatric Hearing Services Improvement Programme, which recommended a number of immediate actions for ICBs and providers. A recent national letter has asked all ICBs to work with their paediatric hearing service providers to implement these actions as a matter of urgency. ICBs and relevant providers may wish to use an SDIP to set out their agreed actions, including on taking forward IQIPS accreditation.

41.6 More generally, as described in paragraph 36.11, accreditation schemes can provide a good structure within which to take forward service improvement activity. CQC has published a <u>list of accreditation schemes</u> which it takes into account in its inspections of providers. Where a commissioner and a provider have agreed that the provider will work towards formal accreditation for a particular service, an SDIP can helpfully be used to set out clear actions and timescales to deliver this.

42 Managing activity and referrals

The provisions in the **shorter-form Contract** for managing activity and referrals are very significantly simplified. There is the potential to include an Indicative Activity Plan if needed, but no reference to Activity Planning Assumptions or Prior Approval Schemes, as these would not generally be expected in relation to the types of service for which the shorter-form may be used.

- 42.1 The key aims of the provisions in SC29 (Managing Activity and Referrals) are to ensure that:
 - where patients have a legal right to choose their provider, this is always enabled;
 - activity carried out under a contract is clinically appropriate; and
 - where an Indicative Activity Plan has been agreed at the start of the year, activity is managed within the agreed levels or – where there are variances – these happen for good clinical or patient care reasons (including as a result of the exercise by patients of their legal right to choice or to achieve national waiting times standards) that are understood and accepted by the commissioner and provider.
- 42.2 There will be situations where it is appropriate for commissioners to use the provisions within SC29 to put downward pressure on activity levels within a contract but SC29 should not be used by commissioners as a blunt instrument simply to control costs. For further guidance on appropriate use of the contractual provisions on activity management, reporting requirements and payment arrangements, please refer to paragraph 42.39 onwards.

Access to services

42.3 The Contract must function as a robust tool through which commissioners can <u>secure</u> access to the services which their population needs. At the same time, commissioners need to be able to use the Contract to <u>prevent</u> access to care or treatment which they deem to be unnecessary, ineffective or inefficient. This will enable commissioners to commission services in line with the <u>NHS Right Care</u> approach. In this context, it is useful to re-cap how the Contract governs access to services.

- 42.4 SC6 requires the provider
 - to accept any clinically appropriate referral where a patient is exercising his / her legal right to choice of provider – even where the patient's Responsible Commissioner is not a party to the local contract; and
 - to accept any emergency referral or presentation for treatment within the scope of the services a provider runs, again even where the patient's Responsible Commissioner is not a party to the local contract. (There is an important caveat here that the provider must be able to provide such emergency treatment safely – we recognise that, for instance, an intensive care unit with fixed bed capacity may not be able to accept transfers from outside its local network if all of its beds are full of very sick 'local' patients. But the general principle is that a provider of NHS-funded emergency services must be open to any emergency presentation, regardless of the identity of the patient's Responsible Commissioner.)

(Note that, for the legal right of choice to apply to a particular service, the provider must have been commissioned to provide that service by at least one ICB. And the provider can then offer the service to other ICBs <u>only as commissioned</u> – that is, on the basis specified in the provider's contract with the first ICB. See paragraph 25.19 above for further detail.)

- 42.5 SC29.3-4 deal with referral protocols and clinical thresholds for treatment and make clear that such documents may be included within service specifications or other aspects of the contract which are <u>agreed</u> between commissioner and provider but that, in other circumstances, they may instead be <u>notified</u> by the commissioner to the provider as a Prior Approval Scheme (described more fully below). (Arrangements for patients to self-refer into many services are already well-established, but note the expectation set out in the <u>2023/24 Priorities and Operational Planning Guidance</u> and the <u>Delivery plan for recovering access to primary care</u> that certain services should now be operating on the basis of accepting self-referrals; this applies to falls services, musculoskeletal services, audiology services for older people, weight management services. Further guidance on these self-referral arrangements is available on <u>FutureNHS here.</u>)
- 42.6 It is worth explaining how these provisions are intended to operate.
 - Where a service operates on a wholly fixed payment approach, then the basis on which patients are to access that service (that is, the clinical threshold for patients to be referred and receive care or treatment) is, effectively, a critical determinant of the price. So, for example, it is probably not realistic to expect an intermediate care service which is funded to deal with referrals for patients over 85 to start accepting referrals from over-75s and operate within the same fixed price. In such a situation, it is appropriate for the 'referral and treatment criteria' under which the service is to operate to be included within the service specification (or separately within Schedule 2G (Other Local Agreements, Policies and Procedures)). If either party wishes to change them, this can only be done by agreement using the Variation provisions at GC13. And discussion on a Variation may, of course, also involve varying the price for the service.

- But what about the situation where a service operates on an "activity x price" basis, with full or marginal prices? In this instance, the price is not dependent on a fixed or guaranteed level of activity. So, for instance, if the commissioner identifies that it wishes to restrict access to certain treatments when specific clinical criteria are met, it is reasonable for it to do so so long as what it is requiring the provider to do remains consistent with Good Practice as defined in the Contract. In this situation, therefore, referral and treatment protocols are best kept separate from service specifications and treated instead as Prior Approval Schemes, which the commissioner can introduce or change through notification to the provider (SC29.17 onwards), but which do not require provider consent.
- 42.7 What happens if a provider starts to offer and charge for new services which the commissioner has not deliberately chosen to commission? The answer will depend in part on what is documented in the local contract. In summary:
 - Where the local contract contains precise service specifications, the commissioner will in principle be able to argue that, by introducing a new service or treatment beyond the scope of what is described in the specifications, the provider has breached its duties under SC3. The commissioner may therefore be on strong ground in refusing to pay for the new service.
 - By contrast, where the specifications in the contract are much looser, the provider will have a stronger argument that it is reasonable for its services to evolve gradually in line with good clinical practice.

Prior Approval Schemes

- 42.8 A Prior Approval Scheme will typically set out a commissioner policy for access to a certain service or treatment – a high-cost drug, for instance, or a treatment of perceived low clinical value. By setting out the clinical criteria or access thresholds in advance, the commissioner enables the provider to offer treatment to patients without needing to seek specific approval from the commissioner on an individual patient basis. In determining potential Prior Approval Schemes, commissioners will wish to review the evidence base and consider the need for appropriate consultation.
- 42.9 The commissioner should notify the provider of any Prior Approval Schemes before the start of the contract year. Schemes can be amended and new Schemes introduced in-year with one month's notice. Where this happens, SC29.20 makes clear that the new or amended Scheme will apply to treatment which is offered after the date on which the new or amended Scheme comes into effect.
- 42.10 Where patients have a legal right of choice of provider, any Prior Approval Scheme which simply restricts that choice is void and cannot be used to restrict payment for activity carried out by the provider.
- 42.11 Where the commissioner determines, prior approval may also operate on an individual patient basis, with the provider seeking approval for each individual case (an "individual funding request" or IFR). The Contract sets out a requirement to

include a response time standard for prior approval requests in the Particulars. The commissioner must respond to a request for approval for treatment within this Prior Approval Scheme Response Time Standard or will be deemed to have given approval under SC29.21. SC29.22 also makes it clear that prior approval arrangements must not place at risk achievement of quality or waiting times standards.

- 42.12 The Contract makes clear that commissioners must have regard to the burden which Prior Approval Schemes can create for providers (SC29.17). This is particularly important now that ICBs and local partner Trusts have legal duties, under the Health and Care Act 2022, to work together to deliver system financial balance. It will not be in the interests of an ICB to insist on the operation of a burdensome Prior Approval Scheme, adding to the costs of its local providers, unless it is confident that a net overall saving to the local NHS will result. It is therefore important that commissioners:
 - ensure that they place the onus on the right part of the system if an ICB does not wish to commission a particular procedure, it can appropriately inform its GPs of this and advise them not to refer patients for that procedure; in other cases, where the decision to offer a specific treatment would be made only by the hospital clinician after diagnosis, a Prior Approval Scheme operated by the hospital provider is likely to be necessary;
 - reserve the more onerous IFR arrangements for a small number of high-cost treatments and complex scenarios (where the decision as to who should access treatment will require detailed information about patients' individual circumstances); and
 - review the cost-effectiveness of their prior approval arrangements if a labourintensive Scheme requiring approval of an IFR in advance is consistently resulting in every patient receiving approval for treatment, it should probably be converted into a commissioning policy of the kind described in paragraph 42.8 above.
- 42.13 Providers, particularly those which deal with many different commissioners, often raise with us the burden which is caused by having to operate multiple different Prior Approval Schemes, covering the same conditions or treatments, but featuring slightly different requirements for different individual ICBs. Clearly, it is ultimately for each ICB to determine its own commissioning policies, and the Contract must allow these policies to be given effect. However, SC29.17 states a requirement for those commissioners operating under a single contract with a provider to use reasonable endeavours to minimise the number of separate Schemes they operate. ICBs must therefore seek to collaborate across local patches to adopt consistent clinical thresholds and administrative processes in their Prior Approval Schemes as far as possible, thus lessening the number and variability of different Schemes which any individual provider has to deal with.

Evidence-Based Interventions Guidance

42.14 Initial statutory guidance on evidence-based interventions published in 2018 was supplemented by further guidance in 2020 and 2022 covering a second and third tranche of interventions, with a fourth tranche due to be published in early 2024.

Taken together, the four guidance documents (referred to in the Contract as <u>Evidence-Based Interventions Guidance</u>) will set out the commissioning arrangements which are to apply to 61 specific treatment interventions. Queries on the Evidence-Based Interventions programme may be addressed to <u>england.EBInterventions@nhs.net.</u>

- 42.15 The Guidance is given contractual effect through provisions included at SC29.24-25, which require
 - commissioners to use all reasonable endeavours to ensure that referrers (GPs and others) act in accordance with the Guidance; and
 - providers to manage referrals and provide the Services in accordance with the Guidance.

ICBs should:

- review the comparative data held on the Foundry activity dashboard, which allows them to identify outliers by activity level for their population; and
- for those interventions where the data suggests that there may be a material level of non-compliance with the EBI Guidance
 - remind their GPs of the specific guidance to take into account when considering referrals for those interventions; and
 - consider introducing a Prior Approval Scheme approach (see paragraphs 42.8-13 above) on a targeted basis, with funding withheld from any providers which carry out those interventions contrary to the terms of the Prior Approval Scheme.

Overall responsibilities for managing referrals and activity

- 42.16 The Contract identifies that both the commissioner and the provider have responsibilities for managing referrals and activity.
 - Commissioners (SC29.3) (SC29.1 in the shorter-form Contract) must seek to
 ensure that referrals comply with any agreed protocols and (full-length version
 only) any relevant Activity Planning Assumptions. In practice, the reasonable
 expectation will be that commissioners should be making vigorous efforts to
 ensure that GPs and other primary care referrers are following agreed
 protocols.
 - Providers (SC29.4) (SC29.2 in the shorter-form Contract) must also seek to ensure that referrals comply with agreed protocols. They will bear a particular responsibility for managing referrals which are internally generated (consultantto-consultant referrals, say), but may also reasonably be expected to assist commissioners in ensuring that primary care referrals are in line with agreed protocols.
 - Providers will also bear particular responsibility for ensuring that the decisions made by their clinical staff to provide treatment to patients are made in line with

clinical thresholds set out the Contract or notified through Prior Approval Schemes. They must also seek to work within the Activity Planning Assumptions relating to referrals and other metrics.

NHS e-Referral Service

42.17 The Contract contains provisions in relation to use of the NHS e-Referral Service (e-RS) at SC6, summarised in the table below.

Any provider must hold a contract with an NHS commissioner (ICB or NHS England) for a service, in order to be able to list that service on e-RS at all.

Acute providers must

- publish their (relevant) services on e-RS;
- use all reasonable endeavours to ensure that sufficient slots are available to enable direct booking of appointments via e-RS; and
- ensure that they accept all referrals made through e-RS via the "appointment slot issues" route (that is, where a GP or patient is unable to book an appropriate slot, but still wishes to make the referral).

Mental health providers must use reasonable endeavours to publish their (relevant) services on e-RS and be in a position to accept GP referrals.

All providers using e-RS must ensure that their services are listed on the correct menu within e-RS.

- The "secondary care menu" (available to referrals from all ICBs in England) must be used <u>only</u> for services to which the legal right of choice applies under the <u>NHS Choice Framework</u>.
- The "primary care menu" must be used for services outside the scope of the legal right of choice, which have been commissioned specifically by one or more ICBs; these services will then be available to receive referrals from those ICBs <u>only</u>.

Commissioners must use all reasonable endeavours to ensure that all GP referrals

- are made via e-RS; and
- contain accurate patient contact details and the clinical information required under agreed referral protocols.
- 42.18 It is essential that providers take a responsible approach when seeking to change the listing their services on e-RS.

- Where a service is covered by a contract, that contract will normally specify a location or locations from which the service is to be delivered. Where that is the case, the provider is not entitled to, <u>and must not</u>, simply list additional locations on e-RS. If the provider wishes to add additional locations, it must approach
 - its current commissioner to seek a variation to its existing contract (if the new locations are chiefly to be used for referrals from the commissioner which holds that contract); or
 - a new commissioner, with responsibility for patients in the area most obviously served by the new location, to seek a new contract (to cover the delivery of services in a completely different location, primarily to attract potential referrals from that new commissioner).
- If a provider wishes to provide additional services (beyond those specified in its contract) from an existing or new location, it <u>must not</u> simply list these on e-RS. As above, it must approach the relevant commissioner, requesting a contract variation / new contract as appropriate.
- 42.19 The provisions of SC6.8, which apply only to GP referrals into consultant-led elective acute services, deserve particular attention. Under these:
 - a provider need not accept any GP referral into a consultant-led acute outpatient service unless it is made through e-RS; rather, the provider will be able to return any non-e-RS referral to the GP;
 - the provider must implement a process under which, in every case, it notifies any non-acceptance of a non-e-RS referral to the patient's GP without delay (that is, in accordance with specific locally-agreed timescales, as described in the guidance at <u>https://www.england.nhs.uk/digitaltechnology/nhs-e-referral-</u> service/); and
 - each commissioner must ensure that local GPs are made aware of this process.

Indicative Activity Plan

- 42.20 Prior to the start of the contract year, the parties should agree, where relevant, an indicative activity plan (IAP). This plan is an indication of the volume of activity that is estimated by the two parties but it is not a guarantee of a given volume of activity nor a cap on the volume of activity of any particular type which will be paid for by the commissioners.
- 42.21 The IAP should include sufficient detail for all parties to understand the indicative activity that has been agreed and any thresholds for reporting purposes that are required by the commissioner. Any thresholds should act as a trigger for discussion to understand why activity is over or under the indicative levels and are not intended as a cap on activity.
- 42.22 An IAP should reflect the expected impact of demographic changes and any firm trends in demand; it may also need to factor in requirements for additional non-

recurrent activity to reduce waiting times so that national standards can be achieved. Equally, an IAP can reflect planned service expansions – or expected reductions in activity within a given service, because of commissioner development of other services elsewhere or plans to improve referral practice. The net effect should be a realistic plan, shared between commissioner and provider, giving the provider sufficient confidence to put in place an agreed level of capacity which should be sufficient to cope with the expected demand and achieve national access standards.

- 42.23 The IAP, as the name suggests, is indicative. For a provider to provide more or less activity than is included within the IAP is not a breach of a contractual requirement, and the commissioner cannot withhold payment simply on this basis.
- 42.24 Where activity planning discussions identify genuine limitations in capacity in a particular service at a provider, commissioners may need to seek to commission additional providers for patients to choose from or look at whether, within the confines of Good Practice, more appropriate referral criteria for that service should be introduced. However, the underlying requirement within the Contract remains that providers will need to be able to flex their capacity up and down as demand fluctuates, accepting referrals and treating patients rather than turning them away.
- 42.25 For some contracts, an IAP may not be relevant. This may be the case for small contracts commissioned to enable patient choice between multiple providers or for a care home contract. In these cases, the parties may dispense with an IAP or agree an IAP of zero.

Activity Planning Assumptions

- 42.26 The commissioner may also wish to set Activity Planning Assumptions (APAs). These may include assumptions about the expected level of external demand for the Services to be provided under the specific contract and / or assumptions relating to how the particular provider will manage activity once a referral has been accepted. Adherence to APAs is monitored as part of the activity management process.
- 42.27 Whether or not to set APAs is a matter for the commissioner. Where the commissioner wishes to use them, they should be notified to the provider before the start of the contract year. APAs must be consistent with the IAP and should not be set in such a way that, as a result, a provider cannot provide the Services in line with Good Practice or that patient choice of provider (where this applies under the NHS Choice Framework) is restricted. For multi-lateral contracts, commissioners should seek to have common APAs for all commissioners. Where this is not possible, the number of different APAs in the contract must be kept to a minimum.
- 42.28 SC29.7 makes clear that APAs are to be notified by the co-ordinating commissioner to the provider. The Contract provides a schedule (Schedule 2C) in which the notified APAs can be recorded, and we think that it is sensible that this schedule should be used as a matter of normal practice. However, for the avoidance of doubt, as the Contract definition of APAs makes clear, APAs are valid so long as they are properly notified to the provider in accordance with SC29.7, regardless of whether or not they are included in the local contract

<u>schedule</u>. However, the definition also makes clear that APAs must be consistent with the relevant IAP. The effect is that

- a commissioner can only notify APAs which align with the agreed IAP; and
- a provider cannot prevent properly notified APAs, consistent with the IAP, from taking contractual effect by refusing to include them in Schedule 2C.
- 42.29 APAs are likely to be used particularly for acute hospital services. To be effective, they should be measurable and evidence based. Potential APAs include:
 - first to follow up outpatient ratios;
 - referrals by source (GP; other primary care provider; consultant-to-consultant; self-referral);
 - emergency readmissions; and
 - non-elective admissions as a proportion of A&E attendances.
- 42.30 By contrast with an IAP, the provider is under a contractual obligation to use all reasonable endeavours to manage activity in accordance with APAs, and the commissioner can use the processes set out in SC29 (Activity Management Plans, for instance) to ensure that this happens. Commissioners should act reasonably, however, in assessing providers' compliance with APAs, reflecting that APAs such as those listed in paragraph 42.29 above tend to be statistical constructs, giving indicative information about the way in which services are being delivered, rather than setting precise standards requiring precise compliance.

Activity Query Notices

- 42.31 On receipt of an activity report which indicates variances against the thresholds set out in the IAP, either party may issue an Activity Query Notice (AQN).
- 42.32 Where an AQN is received, the parties must meet to review referrals and activity and the exercise of patient choice. There are two possible outcomes of the meeting:
 - the AQN is withdrawn; or
 - a Joint Activity Review is held.

Joint Activity Review and Activity Management Plan

- 42.33 A Joint Activity Review will be used to identify the reasons for variances in activity and may result in an Activity Management Plan (AMP) being agreed. Where there is disagreement, either as to whether an AMP is required or as to the actions which it should set out, the parties may refer the matter to dispute resolution.
- 42.34 The AMP may include agreements on how activity should be managed for the remainder of the contract period. The plan should not in any way restrict patient choice of provider. Where it is found that the provider's actions have been causing

increased internal demand for services, for example by reducing clinical thresholds, changing clinical pathways or introducing new services without the agreement of the commissioner, the plan may include an immediate consequence of non-payment for that activity.

- 42.35 Any AMP will usually include:
 - details of the IAP/APA threshold that has been breached including a breakdown of actual activity, actual cost of activity (where appropriate) and actual variance; and
 - evidence of review of the activity, including source data (waiting lists, interviews, sample of patient notes, clinical process and patient flow) and analysis of the likely causes of any breach.
- 42.36 Beyond that, depending on the particular situation, an AMP may set out
 - provider-specific actions to improve the management of internal demand, to improve its utilisation of existing capacity and resources, or to expand capacity – and timescales for those actions to be completed;
 - commissioner-specific actions to manage external demand and timescales for those actions to be completed; and/or
 - any proportionate financial consequences where actions are not completed on time.
- 42.37 The table below gives more detailed examples of the ways in which an AMP can be used to address a specific situation.

Issue	Potential actions in an AMP include:
GP referrals driving increase in elective Activity (above IAP) at provider	 Commissioner reviews adherence by GPs to agreed protocols / thresholds – and may consider introducing tighter ones. Commissioner reviews process for offering patients choice of provider – ie to ensure that full range of options are discussed with patients. (Note that commissioner cannot require provider to "slow down" rate of treatment.)
Activity exceeds IAP because of increase in provider "decisions to treat" for an elective procedure (above APA)	 Provider arranges internal review of clinical practice by consultants, aimed at ensuring adherence to agreed treatment guidelines. Commissioner notifies and implements a new / revised Prior Approval Scheme.
Activity exceeds IAP because of increase in follow-up ratio in a particular specialty (above APA)	 Commissioner undertakes to promote better use of existing shared care arrangements, so that more follow-up is arranged in primary care. Provider agrees to implement measures to ensure hospital follow-up is only offered where strictly necessary / expand its implementation of patient-initiated follow-up.
Referrals at expected level, but Activity below	 Provider takes action to improve its internal productivity / efficiency so that more Activity can be delivered.

IAP and waits increasing	•	Provider agrees to place a new sub-contract with another provider for additional capacity.
Activity exceeds IAP because referrals to the provider are being made by GPs to the provider direct, rather than (as intended) via the ICB's triage service	•	Commissioner engages with GPs to promote the benefits of the triage approach and encourage use, focussing on those practices which are not aware of / using the triage service. Potentially, provider starts to return clinically inappropriate referrals to GPs or redirect them to the triage service, rather than accepting them.

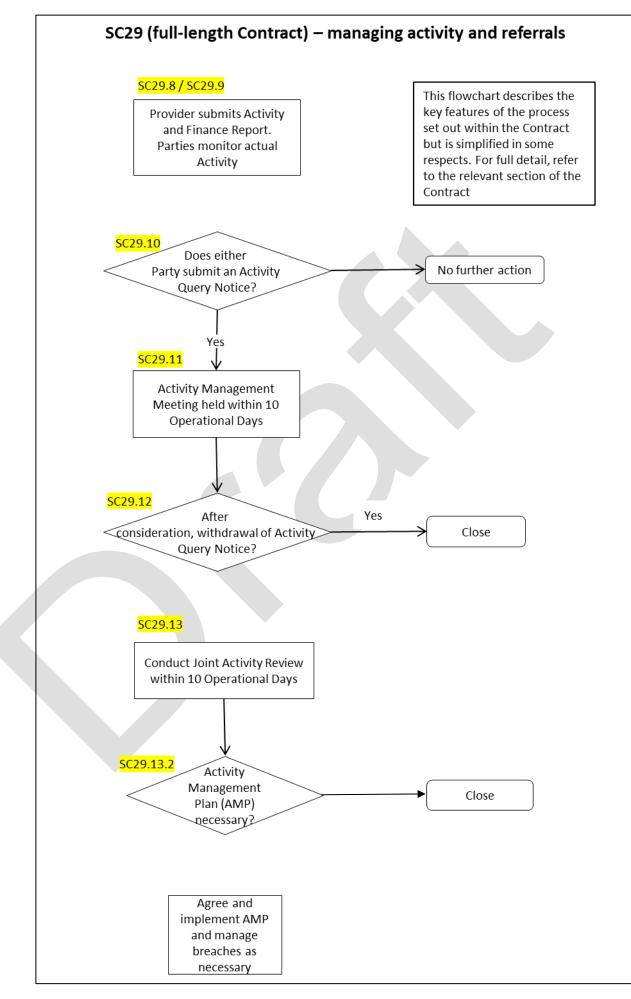

42.38 In extreme situations, where a provider is unable to cope safely with the flow of new referrals into a particular service, discussions under SC29 may lead the commissioner to suspend (under GC16) all new (or all non-urgent) referrals into that service for a time-limited period. See paragraph 25.14 above for more detail on this and paragraphs 47.11-13 below for more information about the suspension provisions. Note that suspension can only be initiated by the commissioner. A provider can only properly close a service, without commissioner agreement, as part of an Incident Response under SC30. For this to apply, the clinical risks associated with continuing to accept referrals and provide treatment would have to be very significant.

Financial consequences under SC29

- 42.39 It is evident from the queries we receive that there is some misunderstanding about the ability of a commissioner to withhold funding from a provider under SC29. Clarification is set out below.
- 42.40 Exceeding the level of activity described in the IAP or breaching a ratio (or similar) set in an APA does not create an automatic entitlement for the commissioner to withhold funding. Rather, the contractual requirement is for an AQN to be served and an Activity Management Meeting to take place, followed by agreement and implementation of an AMP where indicated. By agreement, an AMP may include financial consequences (on either party) for failing to implement the actions set out in the AMP, but the primary purpose of the AMP (as made clear in the Contract definition) is to "restore levels of Referrals and/or Activity to within agreed thresholds".
- 42.41 More broadly, failure by the provider to comply with its SC29 obligations may properly lead a commissioner to
 - pursue remedy under the GC9 contract management process (which may ultimately result in withholding of funding – see paragraph 45 of this Guidance); or
 - seek to apply the provisions of GC11.2 (indemnity for losses incurred as a result of the provider's breach of contract see paragraph 47.32 onwards).
- 42.42 Equally, a provider's response to an AQN may prompt the commissioner to contest payment under SC36.30 (see section 46), either on the basis of simple inaccuracy or because of failure to notify a locally-proposed change in the counting and coding of activity under SC28 (see section 44).

- 42.43 The only ways, however, in which a commissioner can properly withhold funding <u>directly under SC29</u> are
 - to apply a financial consequence agreed in an Activity Management Plan (SC29.16); or
 - to withhold payment for activity carried out in contravention of the terms of a duly notified Prior Approval Scheme (SC29.18).

Yellow = updated from the 2023/24 version of the Guidance published in March 2023

43 Information, audit and reporting requirements

The **shorter-form Contract** does not include the specific processes and sanctions relating to Information Breaches. Failure to comply with reporting and information requirements under the shorter form should be dealt with via the GC9 provisions.

- 43.1 The Contract sets out a range of provisions relating to records and data, whether used for clinical or management purposes. Some of these are contained, for instance in SC23 (Service User Health Records), GC20 (Confidential Information of the Parties) and GC21 (Data Protection, Freedom of Information and Transparency).
- 43.2 The focus of this section of our guidance is on processes through which commissioners can access information about how the provider is providing services under Schedule 6A (Reporting Requirements), SC28 (Information Requirements), and GC15 (Governance, Transaction Records and Audit).

Reporting Requirements

- 43.3 Good quality information is essential to enable providers and commissioners to monitor their performance under the contract. The following guiding principles should underpin the provision of information to support contract management:
 - the provision of information should be used for the overall aim of high-quality service user care;
 - it should be for a clearly communicated purpose or to answer a clearly articulated question, which may be required on a regular or occasional basis;
 - the parties should recognise that some requests for information may require system improvements over a period of time;
 - requests for information should be proportionate to the balance of resources allocated between clinical care and meeting commissioner requirements;
 - unless there are justifiable reasons for doing so, which they can explain to providers, commissioners should not request information directly from providers where this information is available through national systems; and
 - information provided should be of good quality.
- 43.4 Schedule 6A outlines the reports required under the Contract:
 - National requirements reported centrally. This references the <u>list of</u> <u>mandatory national-level data collections, approved by the Data Alliance</u> <u>Partnership Board</u>. Providers must submit data returns as appropriate for their

organisation type and the services they provide from the list. This also includes the delivery of any data or definition set out in relevant national guidance, and any Information Standards Notice (ISN) relevant to the service being provided.

- **National requirements reported locally.** This lists data and reporting requirements which are set nationally, but where the reporting is to commissioners locally.
- Local requirements reported locally. This is where any locally agreed requirements should be inserted. Commissioners should be clear why these reports are required and whether the information requirement is occasional or routine and should set the timeframe, content and method of delivery for these reports accordingly. Note the requirement to ensure that local datasets containing patient-identifiable data are submitted via the Data Landing Portal.
- 43.5 Schedule 6A provides a simple template for documenting local reporting requirements. The headings used are explained in the table below.

Local Reporting Requirement	What is the specific requirement here? A report covering what indicators for what Services?
Reporting Period	Is the report to be provided to cover a month, a quarter or a year?
Format of Report	How is the report to be presented? Written document or spreadsheet? How granular is the data to be – provider-wide, or broken down by site / locality / commissioner?
Timing and Method for delivery of Report	How soon is the report to be produced after the end of the period to which it refers? Is it to be sent to a particular person or presented to a particular meeting?

- 43.6 Despite the established principles above and the existing Contract wording which supports them in SC28, we receive consistent feedback about the high level of burden for providers which is generated by Local Reporting Requirements under the Contract.
- 43.7 As with Local Quality Requirements (see paragraph 39.7 above), a targeted approach with a limited number of well-chosen Local Reporting Requirements is likely to be the most effective approach. SC28.4 requires that commissioners must have regard to the burden their information requests will impose on providers and that they must be able to demonstrate the purpose which any new local information flow serves and the benefits which it yields. Particularly given the new legal duties on ICBs and local partner Trusts, under the Health and Care Act 2022, to work together to deliver system financial balance, it is essential that commissioners are rigorous in reviewing the information burden they place on providers, ensuring that they only require information is in proportion to the costs the provider incurs in collating it and that the information is not already being submitted via a different route.

Failure to comply with SC28 and Reporting Requirements

43.8 For 2024/25, we have removed the arrangements for "Information Breaches" from SC28. Breaches of information and reporting requirements should instead be handled under the overall GC9 process, which is already used for managing all other unrectified breaches – see paragraph 45 below.

<u>SUS</u>

43.9 SC28.17 mandates submission of datasets by providers to the Secondary Uses Service (SUS), where required under <u>national guidance.</u>

Data Quality Improvement Plans

- 43.10 Data Quality Improvement Plans (DQIPs) allow the commissioner and the provider to agree a local plan to improve the capture, quality and flow of data to meet the requirements of Schedule 6A and to support both the commissioning and contract management processes. Although completion of a DQIP is not mandatory for each contract, we nonetheless encourage commissioners to use DQIPs routinely to address data quality issues highlighted through direct reporting at point of submission or through the Data Quality Maturity Index (DQMI).
- 43.11 Note that SC28 includes a specific requirement for the provider to use all reasonable endeavours to optimise its performance under the DQMI, where applicable, demonstrating its progress through implementation of a DQIP or other appropriate mean. The DQMI currently covers the national datasets for admitted patient care, A&E, community services, diagnostic imaging, IAPT, mental health, maternity and outpatients.
- 43.12 Commissioners will need to differentiate between situations where a provider's data quality is acceptable overall, but with some improvements needed (in which case a DQIP will be appropriate) and those where data quality is unacceptable (which need to be managed formally using the provisions in GC9). Putting in place a DQIP means that, in relation to any information requirements contained within the DQIP, the provider will be held to account under GC9 only if the requirements of the DQIP are not achieved.
- 43.13 Multiple DQIPs can be included within the same contract. DQIPs should be included in Schedule 6B at the point where the contract is signed or incorporated into the contract subsequently by a locally initiated Variation. Once included in the Contract, however, commitments set out in DQIPs are contractually binding. Progress against the DQIP should be reviewed through the contract review process (GC8) and any issues addressed through the contract management process (GC9). In a multi-year contract, DQIPs should be updated periodically, as initial issues relating to data quality are resolved and new ones are identified.
- 43.14 In terms of coverage, DQIPs should provide quantified assurance that action is being taken in each of the following areas:
 - Coverage that where a data set exists and is relevant to a provider it is completed for all relevant services;

- Consistency that is, where a data set is produced, the volume of submitted records is consistent over a timeseries;
- Completeness that is, where a data set is produced, all relevant items hold expected values;
- Validity that all data conforms to recognised national standards. Codes must map to national values and wherever possible, computer systems should be programmed to only accept valid entries;
- Defaults the level to which default values specified in applicable information standards have not been used in excessively within the data collected;
- Timeliness that all data is recorded to a deadline in line with the national reporting, and extract and refresh deadlines;
- Cleansing covering duplication (that all necessary processes are in place to remove duplicated records), merging (that steps are being taken to ensure that separate records are not merged inappropriately) and auditing (that clinical coding checks are undertaken on a regular basis).
- 43.15 Commissioners are encouraged to use a range of evidence sources to inform what should be included in a DQIP as well as to identify and quantify the progress they need to make through DQIPs, including in particular the DQMI. Other possible sources are set out below.
 - The monthly SUS data quality dashboard provides benchmarked evidence that commissioners should use to drive improvements in quantitative and processbased data quality indicators for admitted patient care, outpatients and Emergency Care data sets as well as for maternity and critical care. Each of the SUS Commissioning Data Sets are covered by the DQMI.
 - Other data quality reports are published relating to national data collections including the Mental Health Services Data Set, the IAPT Data Set, Community Services Data Set and Diagnostic Imaging Data Set. Each of these data sets is also covered by the DQMI.
 - GC21.6 requires each provider to undertake audits of its performance against the Data Security and Protection Toolkit, and these audits will be a valuable source of information about where data quality needs to be improved, including clinical information assurance and aspects of patient safety-related data quality.
 - The DQMI is used across a number of different frameworks, including the Single Oversight Framework within the Digital, Data & Technology Dashboard of the Model Hospital and is collected by the Care Quality Commission as part of their Well-Led Domain. To ensure consistency across each of these and to assist in setting thresholds for the DQMI within DQIPs, guidance is published on the <u>Data Quality web page</u>.
- 43.16 DQIPs may be particularly useful where new national reporting requirements or datasets have been introduced and where providers are not yet routinely

complying with these. Commissioners should therefore ensure that they monitor closely the data submitted by providers of the relevant services and consider whether use of one of the available contractual levers (DQIP or GC9) would be appropriate to ensure that any problems with the quality of data submitted by individual providers are swiftly rectified.

<u>Audit</u>

- 43.17 GC15 covers Governance, Transaction Records and Audit and makes clear:
 - the provider's responsibilities for carrying out a programme of audit at its own expense (GC15.7 in the full-length Contract, GC15.5 in the shorter-form); and
 - the right of the commissioner to appoint independent auditors (who must be appropriately qualified) to review any aspect of the Services, the provider's invoices and/or the performance of any of the provider's obligations (GC15.8 in the full-length contract, GC15.6 in the shorter-form).

For 2024/25, we have removed from the full-length Contract the detailed provisions which governed how the financial implications of audit findings were to be managed. Both the full-length and the shorter-form versions of the Contract now feature a much simpler and less transactional approach.

- 43.18 Note that the Contract requires the co-ordinating commissioner to give the provider at least ten Operational Days' notice of its intention to appoint an independent auditor (GC15.8).
- 43.19 We have been asked about the relationship between independent audits and information governance requirements in relation to personal confidential data. This issue may obviously arise in the case of audits focusing on clinical services. Providers need a legal basis for disclosing personal confidential data. Without this they are entitled, and indeed required, not to disclose such information, and GC15.8 (GC15.6 in the shorter-form) therefore makes clear that access to such data must be "subject to compliance with Data Protection legislation (including any applicable Service User consent requirements)".

44 Counting and coding changes

As the **shorter form Contract** is not used for acute services, in which activity recording issues tend to be more contentious, it does not include specific provisions for the management of counting and coding changes.

- 44.1 SC28 sets out how changes in the counting and coding of activity should be managed. In the past, this has often been a complex and contentious area, but encouragingly recently very few disputes have been brought to our attention. So we have retained the counting and coding provisions in the Contract but we are making clear that in certain situations it is open to commissioners and providers to implement them in a light-touch way. This applies where:
 - an ICB is commissioning services from a partner Trust in the same local system (given that the ICB and the Trust are now under a legal duty to work together to deliver system financial balance, local disagreements about the financial impact of counting and coding changes should simply not be allowed to arise); and
 - an ICB is commissioning services from a provider on an Aligned Payment and Incentive (API) basis, as set out in the NHS Payment Scheme (most counting and coding disputes have tended to be in relation to "coding drift" in nonelective services – but API involves fixed payment for non-elective care, so this issue should no longer arise).

In these situations, the parties must continue to follow the <u>principles</u> of SC28. It is important that the commissioner is always made aware of <u>material</u> changes in how the provider is recording activity, as there can be no shared basis for planning and monitoring without this. There should be no unplanned financial impacts from counting and coding changes. Within that, however, the parties can adopt – for example – a more flexible local approach to the deadlines and process set out in SC28 for notifying changes and neutralising their financial impact.

- 44.2 SC28 distinguishes explicitly between
 - counting and coding changes made in order to comply with specific new national coding guidance (which we refer to below as "nationally-mandated changes" and which are now covered in SC28.8-28.9); and
 - changes proposed in order to comply with existing previously published national coding guidance which is already in effect ("locally-proposed changes", covered in SC28.11-28.14).

NHS Digital merged with NHS England on 1 February 2023. Prior to that date, the "national coding guidance" described above will have been published by NHS Digital; from that date onwards, it will be published by NHS England.

- 44.3 The requirement to neutralise, in the short term, the financial impact of counting and coding changes applies to both categories. But there is a distinction between the two categories in terms of the requirements around giving notice of proposed changes.
 - The party putting forward a locally proposed change must do so by 30 September, for implementation on the following 1 April; whereas
 - there is no requirement for the provider to give advance notice of a nationallymandated change; all new guidance requiring such a change will be published on a publicly-accessible website, allowing commissioners direct access to the details and removing the necessity for notice. However, the provider must inform the commissioner when it commences implementation of new guidance.
- 44.4 SC28 makes clear that, ultimately, the need for, and extent of, any "neutralising" financial adjustment is triggered by the actual financial impact, in practice, of a counting and coding change, rather than solely by the impact which is estimated in advance, before the change is implemented. (This is made clear in SC28.9 and SC28.14.)
- 44.5 Local disputes over transactional issues such as these must be kept to a minimum, so that commissioners and providers can focus their efforts on more important matters relating to patient care. SC28.15 therefore requires the parties to work jointly and in good faith to monitor the actual impact of counting and coding changes and to agree the extent of any necessary financial adjustments.

Rationale for the national policy on counting and coding changes

- 44.6 For clarity, we have set out below the rationale for why the Contract must continue to contain requirements for the short-term neutralisation of the financial impact of counting and coding changes.
- 44.7 The NHS Payment Scheme guidance does not itself set rules for how patient activity is to be recorded these are contained in the <u>NHS Data Dictionary</u>. Rather, the NHSPS guidance sets the basis on which recorded activity is to be grouped into different categories (e.g. healthcare resource groups (HRGs) for inpatient spells) and the prices which are to apply to those categories.
- 44.8 The national prices in the NHSPS (and under the National Tariff Payment System and Payment by Results before that) have always been based on historic actual reference costs submitted by providers. So national prices are a product of:
 - the historic actual costs of providing specific forms of patient activity; and
 - the way in which providers have, historically, actually recorded that patient activity.
- 44.9 When each new national payment scheme is designed, the impact of changes to that design such as the new grouping structure of HRG4+ for the 2017-19 iteration is carefully modelled at national level, alongside other important factors such as inflation uplifts and efficiency requirements. This informs the eventual

national prices, which aim to strike a reasonable balance between commissioners and providers.

- 44.10 For any national payment scheme to achieve its intended financial impact, it is fundamental that patient activity continues to be recorded on broadly the same basis that informed the calculations underpinning the scheme's development. Changes in recording practice could, under an activity-based payment system, have destabilising financial effects. For this reason, there have always been provisions in national guidance for managing changes in recording practice. These provisions were originally included in the PbR Code of Conduct and then, when that was discontinued in 2013, transferred into SC28 of the NHS Standard Contract.
- 44.11 The Contract provisions aim to strike a reasonable balance between
 - on the one hand, promoting, in the medium term, accurate recording of activity in line with national data definitions, with providers being rewarded on the basis of accurately recorded activity data; and
 - on the other, offering protection in the short-term, for commissioners and providers, against the financial impact of changes in the way activity is recorded.
- 44.12 We believe that it is essential that the short-term financial protection provided by the Contract provisions applies both to locally-proposed and to nationallymandated changes, because neither can have been built into the national calculations for the setting of NHS Payment Scheme unit prices described in paragraphs 44.6-44.9 above.

What do we mean by a counting and coding change?

- 44.13 The SC28 provisions relate to the counting and coding (that is, recording) of activity (that is, how Service Users are cared for or treated clinically under the contract).
- 44.14 In that context, a change in counting and coding practice is:
 - a change from a previous, historically established way of recording activity which affects or would affect how or whether that activity is visible (i.e. reported) to the commissioner, through submission of datasets through SUS or other local reporting routes;
 - a change which is systematic, in that it affects a group of patients in a similar way or ways, rather than just affecting an individual patient; and
 - a change which may affect whether a certain activity is recorded at all or how it is recorded, in terms of how it is classified (as inpatient, outpatient etc.) and/or the extent of any detailed clinical coding of diagnoses and procedures.
- 44.15 There are two key points to bring out from the first element of this.

Is this a change from historically established practice?

- 44.16 Realistically, we know that activity recording practice is not static. A provider may record a particular activity on basis A for five years, then a key member of staff may leave and his or her replacement may, in error, start recording on basis B. This may go on for, say, three months before the provider or commissioner spots the change. Clearly, the historically established practice here is basis A. So the provider has been at fault in making the change to basis B (firstly because it has not given prior notice and secondly because basis B is technically incorrect), but there is no question of it having to give notice in order to revert to basis A.
- 44.17 Not all cases will be so clear-cut, of course. A good rule-of-thumb is that a particular activity recording practice should be considered 'historically established' to the extent that it has informed the Expected Annual Contract Value for the current Contract Year.

Is this a change in what is or would be visible to the commissioner?

- 44.18 What matters is what the commissioner has been and will be able to see about a particular activity. If there is a change in this, then that is a counting and coding change.
- 44.19 Some cases will be very straightforward a provider may start recording a certain group of cases as daycases, rather than outpatient procedures, say. This will immediately flow through to SUS in a way that is visible to the commissioner so it will be a counting and coding change.
- 44.20 But take a different example. A provider has always recorded data about a particular clinic on its own PAS but has never charged for the activity. It realises that there is a national price for that service which it has not been applying and starts to apply it. Is this a counting and coding change? It depends:
 - If the provider has historically submitted the relevant datasets to SUS (or to the commissioner / CSU via another local route), then the commissioner has always been able to see the activity data for the clinic. All that has changed is that the provider has started to apply the national price. This is <u>not</u> a counting and coding change, and the provider may therefore start to charge for the clinic prospectively as soon as it is able.
 - But if the provider has never submitted the relevant datasets for the clinic, but starts to do so for the first time as backing data for the charges it is wishing to make, then that is a change in what the commissioner can see about the service – so it *is* a counting and coding change, the provider cannot start to charge immediately, and the provisions of SC28 must be followed.
- 44.21 The following are therefore <u>not</u> counting and coding changes.

Changes in service provision:

44.22 A change solely in the way in which services are provided may have a knock-on effect on the type, volume or casemix (and therefore cost) of activity recorded (because Service Users are now experiencing a different service). For a service

change of this kind to proceed, it is likely that agreement of a locally-initiated Variation under GC13 will be required, but a service change such as this does not fall within the provisions of SC28 on counting and coding changes.

Changes in charging:

- 44.23 A change solely in the way in which activity is charged for, where there is no change in the way in which that activity is recorded and made visible to the commissioner (as described in the first bullet point of 44.20 above, for instance), is not a counting and coding change.
- 44.24 It is worth saying a little more about the interplay between the counting and coding provisions in SC28 and the NHSPS.
 - Clearly, the provisions of SC28 are <u>not</u> intended to prevent or delay the adoption of new prices, currencies and rules mandated through the NHSPS. Providers and commissioners do <u>not</u> need to give each other notice under SC28 of the application of new NHSPS arrangements, and the impact of the new NHSPS is not subject to the provisions in SC28 for financial neutrality.
 - Applying new NHSPS arrangements without changing the way in which activity is recorded is one thing; making changes to how activity is recorded in order to increase, or with the effect of increasing, income under those new NHSPS arrangements is another. The latter definitely <u>does</u> fall within the scope of the counting and coding provisions at SC28.
 - The two examples below explain this further.
 - A national change such as the introduction of HRG4+ and the associated payment grouper does not, per se, fall within the requirement for financial neutralisation at SC28. HRG4+ is not about how patient activity is recorded in terms of activity classification and diagnostic and procedure codes; it is about how recorded activity is grouped and then charged for. The crucial difference is that the financial impact of HRG4+ has been allowed for, to the extent possible, as part of commissioner allocations and NHSPS setting – there is therefore no need for local adjustments to neutralise its impact.
 - By contrast, if a provider makes a change to its historically-established approach to the counting and coding of activity, in order to benefit financially from a change to the national structure of the payment scheme such as HRG4+, then that does qualify as a counting and coding change under SC28.
 - Best Practice Tariffs are worth particular mention here. The whole intention of the national BPT approach is to give providers an incentive to adopt proven new approaches to service delivery. So, whilst it is good practice for providers to alert commissioners to their intention to achieve a BPT, there should be no requirement for a locally-initiated Variation to be agreed in respect of any change of service provision necessary to achieve this, and the implementation of the BPT would not fall with the prior notification requirements for counting and coding changes under SC28 – because the BPT is about service delivery,

not activity recording. (The one exception to this is where a provider intends to achieve compliance with a BPT simply by changing how it records activity.)

Notifying and implementing locally proposed counting and coding changes

- 44.25 Providers must notify any locally proposed changes which they intend to make to their recording practice to their commissioners six months in advance. Equally, if commissioners wish to propose local changes in how a provider records activity, they must give that provider six months' notice.
- 44.26 The Contract does not set explicit requirements for the form which notifications of proposed changes should take, but they must be made be in writing and delivered in accordance with the notice provisions set out in GC36.
- 44.27 The issue of whether notice has been properly given can cause disputes, and so we have sought to clarify the requirements below.
 - The notice must describe the nature of the change proposed (that is, what actual change is proposed relative to the provider's current practice) and the rationale for it (that is, why it is technically correct under NHS Data Dictionary definitions and national guidance on clinical coding). A notice letter which simply states a broad intention to improve recording or coding, without any specific detail, would not be valid; there must be a concrete actual proposal.
 - As a matter of good practice, notice should contain the best available estimate
 of the impact on the type and mix of activity recorded and of the impact, at
 current prices, on payments between the parties. However, it is not always
 possible to quantify in advance either accurately or at all the financial
 impact of a particular proposed counting and coding change. Failure to
 quantify, when giving notice, the expected financial impact of a proposed
 change does not render that notice invalid.
- 44.28 The expectation in the Contract is that any locally proposed changes agreed will be implemented
 - (for multi-year contracts not in their final year) at the start of the Contract Year following the Contract Year in which notification is given;
 - (for single-year contracts or expiring multi-year contracts), from the start of the contract covering the year following the one in which notification is given (assuming of course that such a contract is awarded to the same provider).
- 44.29 As a general rule, notice of locally proposed changes must therefore be given no later than 30 September in any year, with the changes to be implemented on the following 1 April. However, the parties may instead <u>agree</u> a different implementation date.
- 44.30 Changes proposed by either party should be discussed and agreement reached on whether they are consistent with national recording guidance and should be implemented.

- 44.31 Where agreement cannot be reached on whether a change should be implemented, the parties may refer the matter for dispute resolution.
- 44.32 Any locally proposed changes which are notified after 30 September 2023 will be too late for implementation from 1 April 2024 (unless the party not proposing the change agrees that it can go ahead then). They should instead be re-submitted for the following year (that is, by 30 September 2024), with a consequent delay in potential implementation, if agreed, and full financial impact.

Nationally mandated counting and coding changes

- 44.33 Information about formal changes to requirements for clinical coding, activity recording and submission of datasets is available as follows.
 - Guidance on clinical coding, and Coding Clinic publications, can be accessed via the Resource Library page of the Delen system at <u>https://nhsengland.kahootz.com/t_c_home/grouphome;</u>
 - Information Standards Notices are published at https://digital.nhs.uk/data-and-information/information-standards/information-standards-and-data-collections-including-extractions/publications-and-notifications/information-standards-notifications/information-standards-notifications/information-standards-information-standards
 - Approved Collections relating to the NHS Standard Contract are listed at <u>https://digital.nhs.uk/data-and-information/information-standards/information-standards/information-standards-and-data-collections-including-extractions/publications-and-notifications/nhs-standard-contract-approved-collections.</u>
- 44.34 Since commissioners can access and view new guidance of this kind in the same way that providers can, the provisions of SC28 make it explicit that providers are not required to give advance notice to commissioners of their intention to implement changes to the counting and coding of activity as a result of specific, new formal national guidance (that is, a nationally mandated change).
- 44.35 Rather, the expectation in the Contract will be that the provider will automatically implement any nationally mandated change on the date required in the relevant national guidance but will inform the commissioner when it commences implementation, so that the parties can then discuss and agree appropriate payment adjustments to neutralise the financial impact, as described further below. (At the point of informing the commissioner of implementation, the provider should as described at paragraph 44.27 above for locally proposed changes also give the commissioner its best available estimate of the impact of the change.)
- 44.36 At this stage, we are not aware of specific <u>major</u> changes which are planned to national guidance on activity recording and clinical coding for 2024/25.

Neutralising the financial impact of counting and coding changes

44.37 Whenever a counting and coding change is implemented, SC28 provides for timelimited protection against the financial effect (if there is one), by requiring that the parties must make a payment adjustment, so that the financial impact of each agreed change is rendered neutral in the short term. This applies to both locally proposed and nationally mandated changes.

44.38 What this means specifically is as follows.

For nationally mandated changes, the period of neutralisation is

- where, for any reason, the change is implemented during the Contract Year during which the relevant new national guidance was published, for the remainder of that Contract Year; and
- in any event, for the full Contract Year following the Contract Year in which the relevant new national guidance was published.

For locally proposed changes, the period of neutralisation is

- where, for any reason, the change is implemented during the Contract Year in which it was proposed, for the remainder of that Contract Year; and
- in any event, for the full Contract Year following the Contract Year in which the change was proposed.
- 44.39 For 2024/25, therefore, for locally proposed changes which are notified up to and including 30 September 2023:
 - If a change is implemented with effect from 1 April 2024 or later, the financial impact is neutralised for the whole of the 2024/25 Contract Year.
 - If a change is implemented <u>before</u> 1 April 2024, the financial impact is neutralised for the relevant part of the 2023/24 Contract Year <u>and</u> for the whole of the 2024/25 Contract Year.
- 44.40 Where a reasonable estimate of the expected impact of a change can be made in advance, the parties should make a provisional neutralising adjustment, at the start of the Contract Year, to the Expected Annual Contract Value. But, in all cases, the parties will need to agree a process for monitoring the actual financial impact of the change in practice. Where an estimated up-front adjustment has been made, this can then be amended to reflect the actual impact through the year and where no up-front adjustment has been made and in-year monitoring establishes that there has been an impact, an adjustment (both retrospective and ongoing, as appropriate) can be made as a result. SC28.15 sets out a requirement for the parties to approach this jointly and in good faith.

Delays in implementing changes

44.41 When new national guidance is published on activity recording or clinical coding, the expectation is of course that providers will implement this on the date or phased sequence of dates set out in the guidance; indeed, doing so is a contractual requirement. However, we recognise that implementation by a particular provider may occasionally be delayed – advertently or inadvertently. If the provider realises, after the mandated implementation date, that it has not implemented the required change, can it still do so as a nationally-mandated

change – or must it now give notice of its intention to do so as a locally-proposed change?

- 44.42 Equally, where a provider has given proper notice of a locally-proposed change, and the parties have agreed that it should be implemented on a certain date, then the provider is under a contractual duty to implement the change on that date. But if the provider nonetheless fails to implement the change to the agreed timescale, what is the consequence? Can the provider still proceed to implement the change later than agreed, or must it give notice again in the next annual cycle?
- 44.43 A simple rule of thumb applies in both these situations. If actual implementation is delayed but still takes place within six months of the intended implementation date (either as set out in national guidance or, for locally-proposed changes, as agreed between the parties in both cases, typically 1 April), then no further notice is required. If implementation is delayed beyond this point, the provider must notify the change (as a locally proposed change) by the next relevant deadline under SC28.11, and the period of financial neutrality will be extended accordingly.

Counting and coding changes for services with local prices

- 44.44 The provisions relating to counting and coding changes are of most relevance where services are being provided at National Prices. With services covered by Local Prices:
 - the requirement for prior notification of proposed changes applies (so that neither party can be financially disadvantaged by application of an in-year counting change); and
 - the impact of any proposed counting changes should be considered as part of the review of Local Prices for the following year, with the likely outcome being that the Local Price will be rebased to reflect the revised activity levels implied by the different approach to recording – this will have the effect of ensuring that any change is financially neutral.

What a provider should do if evidence of inaccurate recording emerges

- 44.45 There is inevitably a tension between the underlying requirement in SC28.7 that activity should be recorded correctly as required under relevant national guidance (the NHS Data Dictionary, for instance) and the recognition, through the arrangements elsewhere in SC28 for locally-proposed counting and coding changes, that provider recording is, in practice, not always accurate. What does this mean for how providers should behave?
- 44.46 Technically, a commissioner could take the view that any instance of systematically inaccurate counting and coding amounted to a breach by the provider of its obligations under SC28. For the provider, therefore, the correct response on identifying such an instance is to notify the commissioner immediately of a locally proposed counting and coding change. By doing so, the provider is taking the appropriate action under the Contract to rectify the breach.

Implementation of local changes without prior notice

- 44.47 SC28.10 makes clear that providers must not implement local changes in counting and coding practice without prior notification and agreement. But if a provider nonetheless does so, what should happen?
- 44.48 Where a provider becomes aware only after the event that its staff have implemented a local change without proper prior notification of the commissioner, it must notify the commissioner at once, identifying the financial impact of the change as accurately as possible.
- 44.49 Similarly, if the commissioner is the first to become aware of such a change, it should notify the provider and, to protect its position, should contest payment for the financial impact of the change (as accurately as it can reasonably assess), at the earliest opportunity, under the arrangements for financial reconciliation at SC36. (Remember that a commissioner contesting payment under SC36.30 must always give its reasons "in reasonable detail"; so the commissioner should, in such an instance, set out to the provider proper evidence that a counting and coding change has taken place and that it has had the direct effect of increasing commissioner payments.)
- 44.50 In either case, because the provider has not given proper notice, the commissioner is likely to be justified in challenging payment in respect of any adverse financial impact for itself of the revised recording basis. This will apply both <u>prospectively</u> (until such point as proper notification of the change has taken place and the necessary period of financial neutrality has been enforced, as required under SC28) and <u>retrospectively</u> (to the date at which it contested payment under SC36.30).
- 44.51 If an un-notified counting and coding change is identified only well after its implementation, the question then arises as to whether the commissioner can properly seek retrospective financial protection back to the date of implementation, even if this pre-dates by some months the point at which the commissioner contested payment. Two points are relevant here.
 - The wording on financial neutrality in SC28.9 and 28.14 now includes a reference to changes "found following implementation to have had" a financial impact. The intention of this wording is to ensure that neutralising financial adjustments are based on the actual impact of the change, not just on an in-advance estimate which may prove inaccurate. The wording of SC28 does not, however, create an automatic entitlement for a commissioner to receive financial redress for an un-notified counting and coding change back to the point of implementation.
 - The provider may of course offer such retrospective redress voluntarily, but if not – the commissioner may instead seek it using the provisions of GC11.2 (Liability and Indemnity). These provisions of GC11 allow either party to claim redress for losses it may suffer as a direct result of the other party's breach of contract. Note, however, that GC11.12 requires the party seeking to make such a claim to "take all reasonable steps to minimise and mitigate" its losses – so, for a retrospective claim under GC11 to be successful, a commissioner is likely to have to demonstrate that it has been vigilant in identifying and

contesting the un-notified counting change at the earliest reasonable opportunity.

Assessing whether a change has happened and what its impact has been

- 44.52 Counting and coding changes are not always easy to identify or assess. There can be local disagreements over whether an un-notified change has actually taken place and over what the impact of a change (notified or un-notified) has been. This is particularly true where the issue relates to a gradual increase in the acuity of reported inpatient casemix, for instance, with an associated increase in the depth of diagnostic coding at episode level.
- 44.53 There are two important points here.
 - Firstly, an un-notified counting and coding change is easiest to detect where it
 is a step-change that is, for instance, where a provider reclassifies activity as
 daycase rather than outpatient. A change of this kind will usually be readily
 apparent from a straightforward analysis of commissioning datasets. However,
 a gradual but sustained change for example, an increase over a year in the
 average number of diagnostic codes per episode in a particular service from
 three to four <u>may</u> also be a counting and coding change. A counting and
 coding change does not have to be an "overnight" step-change.
 - However, a reported increase in depth of diagnostic coding may have many potential explanations. A counting and coding change may be one (or indeed the only) factor in some cases. In other cases, an increase in reported casemix complexity for one commissioner may be explained by planned service developments / pathway changes or changes in patient flows between providers, change in attribution of patients between ICB and NHS England, genuine increase in patient acuity and, more basically, normal fluctuations in casemix from year to year as well as, or instead of, a change in recording practice by the provider. So an increase in depth of coding cannot be <u>automatically</u> construed as a counting and coding change under SC28 of the Contract; that may be the explanation, or part of the explanation, or it may not, depending on the precise circumstances of the individual case.
- 44.54 Where issues of this kind arise as SC28.15 requires the local parties therefore need to review the evidence and work together, openly and in good faith, to reach a shared understanding, on the balance of probabilities, of what has occurred and what the financial impact has been.

Counting and coding changes and financial reconciliation and audit

- 44.55 Care must be taken to distinguish between:
 - issues which a commissioner may legitimately challenge through the financial reconciliation process in SC36 and the audit process in GC15; and
 - situations where the appropriate action is for the commissioner to propose a recording change under SC28.

- 44.56 Legitimate challenges under SC36 / GC15 may focus, for example, on inaccuracies in recording at individual patient level, allocating patients to the wrong commissioner, double-counting or inaccurate calculations. But where the commissioner questions a historically-established, systematically-adopted recording approach by a provider, use of which has informed the Expected Annual Contract Value agreed by both parties, then the correct approach will be for this to be handled as a locally-proposed counting and coding change under SC28, rather than as an issue to be handled in-year under SC36 or GC15. For the avoidance of doubt, this applies even where the provider's recording practice is not compliant with national standards and guidance.
- 44.57 By contrast, an audit under GC15 may appropriately be instigated by the commissioner as a way of assessing whether an un-notified counting and coding change has indeed taken place and what its financial impact has been. But, in such cases, it is essential that the audit is set up and undertaken as GC15 intends with the Auditor acting as "an appropriately qualified, independent third party" (as the Contract definition in the General Conditions describes it), with a duty to establish the factual position impartially and objectively, taking into account all reasonable evidence and arguments. The role of the auditor under GC15 must not be confused with that of an external consultant to the commissioner. The auditor's role is emphatically <u>not</u> to provide the commissioner with advice on how best to interpret the evidence to its advantage; rather, GC15 must be used with the aim of providing the local parties with a "single version of the truth" from an authoritative, impartial source, albeit one appointed by the commissioner.

Conclusion

44.58 Although the Contract provisions on counting and coding changes remain absolutely necessary, we recognise that they can be complex to operate in practice. Many cases will be very clear-cut, but others will involve an element of interpretation and judgement, and quantifying the financial impact of counting and coding changes is not always a precise science. Good management of potential counting and coding changes will therefore rely on a reasonable approach from both commissioner and provider at local level. Both should work in good faith to the common goal that – while in the medium term the provider should be reimbursed in relation to accurately recorded activity – the aim of the contractual provisions on notification and financial impact of counting and coding changes is to avoid short-term financial gains or losses to either party. As we have noted above, the moves to system working and the API model for payments to Trusts should also make rigid application of much of the Contract mechanism for counting and coding changes increasingly unnecessary.

45 Contract management

The provisions in the **shorter-form Contract** for contract management are very significantly simplified. Either party may issue a Contract Performance Notice, and the parties may then agree and must subsequently implement appropriate remedial actions.

Contract review process

- 45.1 The contract review process is set out in GC8 (Review).
- 45.2 The necessary frequency of reviews will generally depend on the subject matter and size of the contract and the level of financial or clinical risk involved. The parties may agree a suitable interval between reviews, which should be at least every six months. The review frequency agreed should be set out in the Particulars. (Under the shorter-form Contract, we expect review meetings to be held as and when required, rather than on a fixed schedule.)
- 45.3 The matters for review will depend on the type of contract. Potential areas for review will include service quality, finance and activity, information, and general contract management issues. Commissioners and providers should identify those areas which require review, taking into account the reporting requirements set out in the quality and information schedules.
- 45.4 Either party may call an emergency review meeting at any time. Representation at meetings is left to local discretion. However, the parties will wish to ensure appropriate senior clinical representation, where relevant to the services.

Contract management process

45.5 The stages of the contract management process are set out in the flowchart below, but we have also clarified some points below about the way in which the process is intended to work.

Informal queries and Contract Performance Notices:

45.6 Factual queries to aid understanding should normally be handled informally between the parties or, if necessary, more formally as a request for information under SC28. By contrast, the formal Contract Management process is initiated through a Contract Performance Notice when either party has a clear understanding that the other has, or may have, breached a contractual obligation.

Joint Investigations:

45.7 Where a Contract Performance Notice has been discussed and is not withdrawn, the default position is that a Remedial Action Plan (RAP) is agreed (and/or, if the safety of patients, staff or the public is at risk, an Immediate Action Plan is implemented). However, where there is disagreement between the parties about whether either form of action plan is required, they must undertake a Joint Investigation (to be completed within two months).

Failure to engage or agree:

45.8 The expectation in the Contract is that the parties will engage in good faith to remedy breaches of any contractual obligations. However, where the remedial process described at GC9.7 (Contract Management Meeting) or GC9.8-9 (Joint Investigation) is stalled for any reason, GC9.15 makes provision for the governing bodies of the parties to be notified. If, after a further ten Operational Days, it has still not been possible "due to unreasonableness or failure to engage on the part of the Provider" to move the process to the next stage of GC9, GC9.16 allows the coordinating commissioner to withhold a reasonable and proportionate sum of up to 2% of the Actual Monthly Value for each further month in which no progress is made.

Exception Reports:

- 45.9 GC9.20 makes provision for the issue of an Exception Report where a party has breached the requirements of a RAP. Exception Reports offer the opportunity for the injured party to set out formally, to the highest management tier within the other party, the contractual requirement which has been breached and the remedial action which is urgently required.
- 45.10 GC9.21 gives the co-ordinating commissioner the power to withhold funding following the issue of an Exception Report see paragraph 45.12 below.

Remedial Actions Plans and financial consequences:

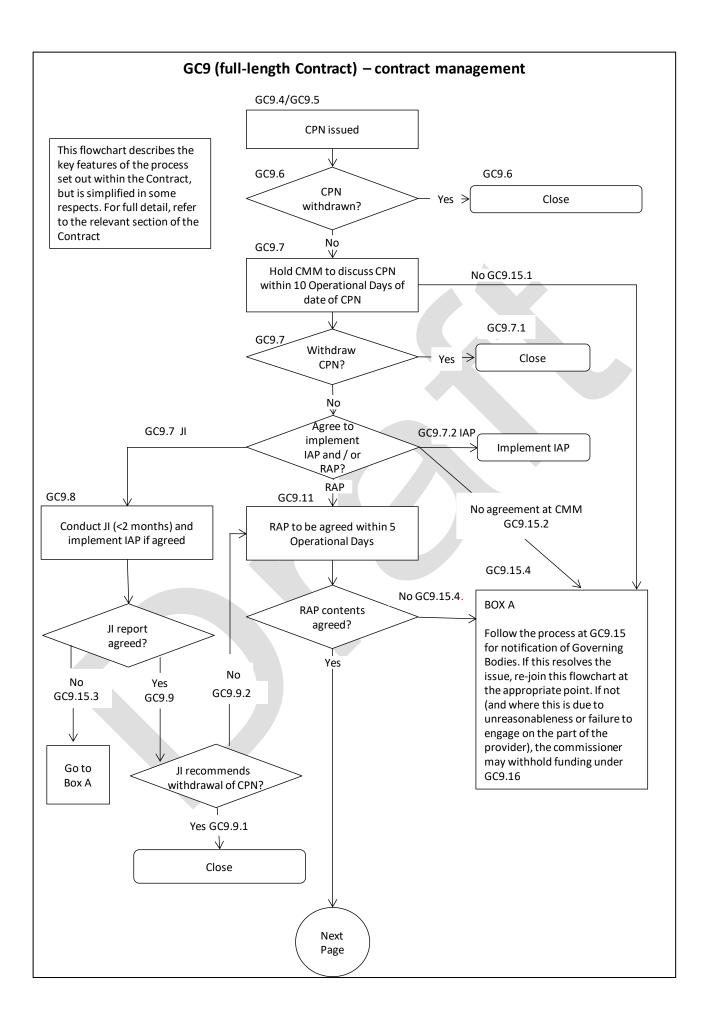

- 45.11 A RAP may set out both actions to be undertaken <u>and</u> improvements to be <u>achieved and maintained</u>, with the RAP setting out required timescales for each.
- 45.12 Clearly, the intention of a RAP is that it leads to remedy of the contractual obligation that has been breached. But the Contract sets out provisions which apply where this is not the outcome.
 - By agreement, a RAP may include reasonable and proportionate financial consequences (on either the provider or the commissioners) which are to be applied where the actions / outcomes set out in the RAP are not undertaken / achieved as the RAP requires. Where this is the case, these financial consequences may be applied immediately the breach of the RAP is clear. No Exception Report is required in order for these financial consequences to be exercised.
 - Alternatively, where no immediate financial consequences are agreed as part
 of the RAP itself and where the provider breaches the RAP, the co-ordinating
 commissioner has the opportunity under GC9 to issue an Exception Report.
 The co-ordinating commissioner may at this point withhold funding ("a
 reasonable and proportionate sum of up to 2% of the Actual Monthly Value" in
 respect of each action not completed or improvement not met, "subject to a
 maximum monthly withholding in relation to each Remedial Action Plan of 10%
 of the Actual Monthly Value"). Following issue of the Exception Report, the
 Contract then allows the provider a further 20 Operational Days to resolve the
 breach of the RAP. If the breach remains unresolved at this point, the co-

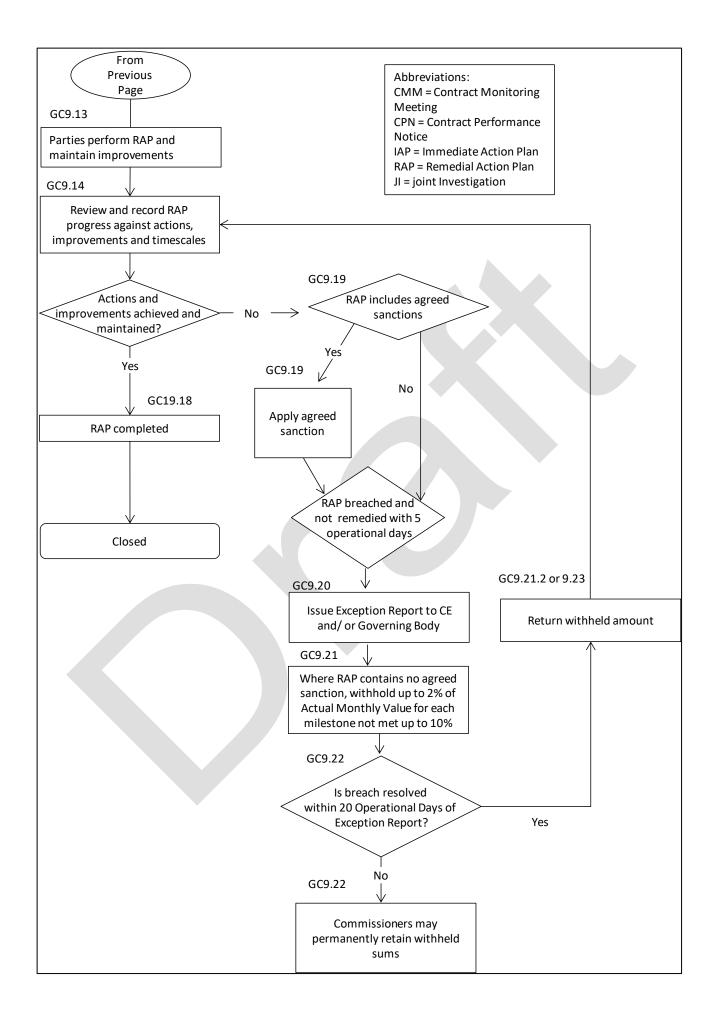

ordinating commissioner may permanently retain, at its discretion, the sums it has previously withheld.

- 45.13 The intention of these provisions is a) to emphasise that financial consequences should be reasonable and proportionate and b) to create a greater incentive for specific, appropriate financial consequences to be agreed between the parties as part of RAPs, rather than encouraging reliance on the broader provisions for withholding of up to 2% of Annual Monthly Value.
- 45.14 These broader provisions for withholding funding under GC9 are deliberately available to the commissioner only since the priority here is to protect services to patients, which it is the provider's role to provide. But note the following.
 - We anticipate that these withholding provisions should need to be used only very infrequently and any withholding must be "reasonable and proportionate", as the Contract wording requires. This is especially true in the context of the new legal duties, under the Health and Care Act 2022, on ICBs and local partner Trusts to work together to deliver system financial balance.
 - Funding is <u>withheld temporarily</u> in the first instance and is repayable to the provider, once the provider engages properly in the remedial process (if the withholding is under GC9.16) or fully implements an agreed Remedial Action Plan (if the withholding is under GC9.21). Funding may only be <u>retained</u> <u>permanently</u> by commissioners in the specific circumstances set out in GC9.22 or GC9.24-25.
 - Where a provider believes that a commissioner is refusing to address its own breaches of contract under GC9, it may a) pursue the matter through the dispute resolution process at GC14 and/or b) seek compensation under GC11 for losses which it can demonstrate that it has incurred as a direct result of the commissioner's breach of contract.

Breach of new national requirements in the Contract

45.15 The annual update of the NHS Standard Contract typically introduces a range of new policy requirements. Not all providers will be in a position to comply fully with all such requirements from the first day on which the new Contract takes effect. Where this is the case, commissioner and provider should discuss a prompt, but realistic, timescale for implementation, with this recorded in the local contract as a Remedial Action Plan or Service Development and Improvement Plan if required.

46 Payment

The payment provisions in the **shorter-form Contract** are similar to those in the full-length version but omit certain details. The shorter-form Contract no longer references CQUIN.

46.1 This section describes the contractual processes and schedules relating to the making of payments between the parties.

Note regarding CQUIN

NHSE is considering a change to the current 2023-25 NHS Payment Scheme, under which the operation of the <u>Commissioning for Quality and Innovation</u> <u>scheme</u> (CQUIN), which forms part of the Aligned Payment and Incentives Rules for Trusts within the Payment Scheme, would be "paused" during 2024/25..

In terms of the implications for the Contract, SC38.1 requires a CQUIN Scheme to be implemented "where and as required by the Aligned Payment and Incentive Rules and by CQUIN Guidance". If a pause to CQUIN for 2024/25 is confirmed following consultation, the Rules and Guidance will not require CQUIN to be implemented for the duration of that pause, and so the rest of SC38 will simply be redundant for as long as the pause continues, pending the outcome of the broader review of incentives. But those provisions could become "live" again if and when the pause is terminated. We have therefore not proposed any specific changes to the Contract wording at this stage as a result of the potential CQUIN suspension.

References to CQUIN in the Guidance below should be read in this context.

Payment schedules

- 46.2 Under the Health and Care Act 2022, the previous National Tariff Payment System has been replaced by the NHS Payment Scheme. Prices payable under an NHS Standard Contract must always be agreed in accordance with the rules set out in the NHS Payment Scheme.
- 46.3 The wording of SC36 and the relevant Schedules (3A-F) reflect the approach and terminology in the NHS Payment Scheme for 2023/25.
- 46.4 Under the 2023/25 NHS Payment Scheme, the approach to the pricing of Services varies depending on the type of provider.
 - All non-NHS providers (that is, providers which are not NHS Trusts or NHS Foundation Trusts) will be paid,
 - for certain elective acute services, on the basis of Unit Prices published under the "activity based payment" rules at section 6 of the NHS Payment Scheme (note that the Contract deliberately does not contain a specific schedule where relevant Unit Prices are to be recorded; rather, the

published Unit Prices, subject to applicable MFF and specialist top-ups, apply automatically); and/or

- for all other services, on the basis of Local Prices, agreed in accordance with the "local payment arrangements" rules at section 7 of the NHS Payment Scheme.
- All NHS Trusts and NHS Foundation Trusts will be paid primarily on the basis of the "aligned payment and incentive" (API) rules at section 4 of the NHS Payment Scheme.
 - Within this approach, all services other than elective activity will be paid for through a single commissioner-level fixed payment.
 - Elective activity (as defined within the API rules) will be paid for on the basis of actual volumes at 100% of Unit Prices (where published), subject to applicable MFF and specialist top-ups, or at agreed Local Prices.
 - The CQUIN financial incentive scheme would normally apply only under API, but see above for details of the potential proposal that CQUIN is "paused" for 2024/25.
 - In respect of services in scope of rules 4 and 5 of the API rules, Trusts will be paid on the basis of agreed Local Prices.
- 46.5 Locally agreed details relating to prices and payment are to be recorded in Schedule 3, as set out below. Not all of the sub-schedules with Schedule 3 will need to be completed for every contract. Schedule 3A on API will only be used for Trust contracts, for example.
 - Schedule 3A records agreed API arrangements for each commissioner-Trust relationship. Detailed guidance on completion of this schedule is contained in italics in the schedule itself.
 - Schedule 3B records any Locally Agreed Adjustments to Unit Prices. These are local agreements between a commissioner and a provider to depart from the Unit Prices set out in the NHS Payment Scheme. Adjustments may only be agreed specifically as set out in the NHS Payment Scheme. The commissioner must publish any Locally Agreed Adjustments using the template provided by NHS England and must also notify the Adjustments to NHS England. See the NHS Payment Scheme for full details.
 - Schedule 3C records Local Prices (including details of the basis on which payment is made for each locally priced Service – "activity x price", block payment, marginal rate etc). In the case of a contract covering more than one Contract Year, there is a specific provision (SC36.6) for the parties to record within Schedule 3C any agreement they reach in terms of how local prices should be adjusted for subsequent Contract Years.
 - Schedule 3D sets out the Expected Annual Contract Value (EACV). This is the figure on which any payment on account is then based see below for further detail. Note that, under SC36.12, an EACV <u>must</u> be agreed if the provider is

an NHS Trust or an NHS Foundation Trust and <u>may</u> be agreed if the provider is a non-NHS organisation. This reflects the expectation that Trusts will operate under API and will therefore always have an agreed EACV.

- Schedule 3E allows for recording of timing of payments in the first or final contract year (required only where a local contract does not commence on 1 April or expire on 31 March).
- Schedule 3F would normally record the relevant national CQUIN indicators which a Trust is incentivised to achieve – but, if the potential "pause" described above is confirmed following consultation, completion of this Schedule will not be necessary for 2024/25.
- 46.6 The arrangements for payment for high-cost drugs, devices and innovative products require explanation.
 - A workbook published as Annex A to the NHS Payment Scheme identifies a range of specified high-cost drugs, devices and products, the costs of which have been excluded from Unit Prices.
 - The NHS Payment Scheme sets a general rule for how these are to be paid for the "excluded items pricing rule" at section 3.4.
- 46.7 What this means for provider payment is set out below.
 - Where Unit Prices or Local Prices apply, the items identified in Annex A above are therefore to be paid for separately by commissioners, in addition to the Unit Price or Local Price.
 - Where payment for a drug, device or product is to be made separately, this is generally handled on a "pass-through" (i.e. actual cost) basis, but – under the "excluded items pricing rule" – specific prices for some items may in some cases apply or be agreed. There should generally be no need to list all of the excluded items in any of the schedules above, but any specific agreements on prices for excluded items do need to be recorded in Schedule 3C.
 - The EACV in Schedule 3D can where agreed locally include an estimate for any excluded items, with in-year reconciliation to ensure final payment reflects actual costs; this approach will mean that that the provider receives an in-advance payment in relation to the excluded items. Otherwise, payment for excluded items can be purely retrospective.

Invoicing, payment and reconciliation

46.8 Detailed arrangements for invoicing, payment and financial reconciliation are set out in SC36 and in the flowcharts below. Note the changes, for 2024/25, to the language of SC36 in relation to invoices. Historically, payments to providers under the Contract have been made on the basis of an invoice submitted by the provider to the commissioner. This remains the case for non-NHS providers, but payments from commissioners to Trusts are now to be made on the basis of a different, less burdensome approach, the "invoice payment file" described further in the Revenue, Finance and Contracting Guidance. Under this approach, commissioners make payments to Trusts, without the need for submission of invoices and based instead on discussion and agreement in advance of values to be paid.

- 46.9 The arrangements will vary between contracts in a number of ways.
 - EACV agreed with block payment. The simplest arrangement will be where the commissioner and provider agree that the EACV will be paid on a block basis, with no adjustments to payment to reflect actual in-year activity volumes. In this case, under SC36.13-14, the commissioner pays the provider the agreed amount, in advance, on the 15th day of each month. Note that, although the default remains that up-front payments are made in equal 12ths, SC36.13-14 allow the parties to agree a more realistic, tailored profile to reflect expected seasonal patterns or the phased impact of recovery plans, for example.
 - EACV agreed with reconciliation required. In this situation, commissioner and provider have agreed an EACV which is being paid in advance in the same way but they have also agreed that payment will be adjusted in-year, for example to reflect whether the provider over- or under-performs against the Indicative Activity Plan in the contract. In this case, the commissioner makes monthly on-account payments as described above, but the provider also submits quarterly reconciliation (SC36.17-19) accounts to the commissioner, adjusting for any difference between the payment already made and the actual sum due. Reconciliation accounts are always submitted quarterly, but the arrangements and timescales differ depending on whether the provider is required to submit any data to SUS see further detail below.
 - No EACV agreed (non-NHS providers only). In this situation, the provider invoices retrospectively, on a monthly basis, for activity actually undertaken (SC36.23-24). Again, the arrangements and timescales differ depending on whether the provider is required to submit any data to SUS see further detail below.

Invoicing and reconciliation under SUS

- 46.10 The provider must submit data to SUS in accordance with <u>SUS Guidance</u> (SC28.17).
- 46.11 Where the provider has an agreed EACV and provides any Services for which data must be submitted to SUS, then a two-stage reconciliation process (commonly referred to as "flex and freeze") applies for all the Services provided under the contract (SC36.17-18), with the provider submitting to the commissioner both a first and a final reconciliation account, in accordance with the national SUS process and timeline.
- 46.12 Key deadlines from the <u>SUS+ Submission Timetable 2024/25</u>, by which data for each month must be submitted, are shown below. The Reconciliation Inclusion date is what is informally known as the "flex" date and provides an initial non-binding view of the month's data. The Post-Reconciliation Inclusion date is the point at which a provider's submitted data for the month is "frozen" and may not

subsequently be changed for payment purposes. The Delivery date in each case is the date on which the SUS data is made available for commissioners to view.

	Reconciliation		Post-Reconciliation	
Activity Month	Inclusion	Delivery	Inclusion	Delivery
April	Mon 20 May 24	Thu 23 May 24	Wed 19 Jun 24	Fri 21 Jun 24
May	Wed 19 Jun 24	Fri 21 Jun 24	Wed 17 Jul 24	Fri 19 Jul 24
June	Wed 17 Jul 24	Fri 19 Jul 24	Mon 19 Aug 24	Wed 21 Aug 24
July	Mon 19 Aug 24	Wed 21 Aug 24	Wed 18 Sep 24	Fri 20 Sep 24
August	Wed 18 Sep 24	Fri 20 Sep 24	Thu 17 Oct 24	Mon 21 Oct 24
September	Thu 17 Oct 24	Mon 21 Oct 24	Tue 19 Nov 24	Thu 21 Nov 24
October	Tue 19 Nov 24	Thu 21 Nov 24	Tue 17 Dec 24	Thu 19 Dec 24
November	Tue 17 Dec 24	Thu 19 Dec 24	Mon 20 Jan 25	Wed 22 Jan 25
December	Mon 20 Jan 25	Wed 22 Jan 25	Wed 19 Feb 25	Fri 21 Feb 25
January	Wed 19 Feb 25	Fri 21 Feb 25	Wed 19 Mar 25	Fri 21 Mar 25
February	Wed 19 Mar 25	Fri 21 Mar 25	Mon 17 Apr 25	Wed 23 Apr 25
March	Mon 17 Apr 25	Wed 23 Apr 25	Tue 20 May 25	Thu 22 May 25

46.13 Reconciliation and retrospective invoicing, and validation by commissioners of provider data, take place in the context of these dates, as explained further below.

Data queries at the flex stage (SC36.29):

- 46.14 Providers should do all they can to make their data as accurate as possible at the initial flex stage.
- 46.15 Once the Reconciliation Delivery date for a month has passed, the commissioner can see the provider's SUS data and can raise any data queries from this point onwards. It is in the interests of both parties that such queries are raised and answered by the provider promptly, so that any inaccuracies in the data can be corrected by the freeze point for that month (the Post-Reconciliation Inclusion date) a month later. This is particularly important in giving providers the opportunity to recode any activity initially attributed to the wrong commissioner, so that they still have time to recoup income from the correct commissioner.

Quarterly reconciliation (SC36.17-18):

- 46.16 Where, as described above, quarterly reconciliation applies, the Contract requires the provider to submit, for each quarter:
 - an initial (flex) reconciliation account by what the Contract calls the First Quarterly Reconciliation Date – that is, the relevant Reconciliation Delivery date in the table above; and

- a final (freeze) reconciliation account "within five Operational Days after the Final Quarterly Reconciliation Date" that is, within five working days of the relevant Post-Reconciliation Delivery date in the table above.
- 46.17 The quarterly deadlines, in 2024/25, for submission under the Contract of quarterly reconciliation accounts to the commissioner are therefore as follows:

	Initial reconciliation account	Final reconciliation account
Quarter 1	Fri 19 Jul 2024	Weds 21 Aug 2024 plus five working days = Thurs 29 Aug 2024
Quarter 2	Mon 21 Oct 2024	Thurs 21 Nov 2024 plus five working days = Thurs 28 Nov 2024
Quarter 3	Weds 22 Jan 2025	Fri 21 Feb 2025 plus five working days = Fri 28 Feb 2025
Quarter 4	Weds 23 Apr 2025	Thurs 22 May 2025 plus five working days = Fri 30 May 2025

46.18 So, as an example, the initial reconciliation account for quarter 1 must be based on frozen SUS data for April and May (in each case frozen at the relevant monthly deadline shown in the table at paragraph 46.12 above) and flex SUS data for June. The final reconciliation account for quarter 1 must be based on frozen data for April, May and June (in each case frozen at the relevant monthly deadline shown in the table at paragraph 46.12 above).

Monthly retrospective invoicing (SC36.23):

- 46.19 As described above, monthly retrospective invoicing only applies for non-NHS providers with no agreed EACV.
- 46.20 The provider must issue a monthly invoice to the commissioner "within five Operational Days after the Final Monthly Reconciliation Date" – that is within five working days of the Post-Reconciliation Delivery date in the table at paragraph 46.12 above. For April 2024, the deadline for invoicing is Fri 21 June 2024 plus five working days – i.e. Fri 28 June 2024. The same approach then applies in each succeeding month.

Invoicing and reconciliation where SUS does not apply

- 46.21 The arrangements where SUS does not apply to any of the provider's Services are simpler.
 - Where an EACV has been agreed, then the commissioner makes monthly payments in advance in the normal way under SC36.13-14. However, the provider then only submits a single quarterly reconciliation account (SC36.19)

 there is no flex and freeze process. The quarterly reconciliation account must be submitted within 20 working days of the end of the relevant quarter.
 - Where there is no agreed EACV (non-NHS providers only), invoices for actual activity undertaken must be submitted retrospectively each month (SC36.24).

The invoice must be submitted within 20 working days of the end of the relevant month.

Other points

- 46.22 Throughout SC36, the onus is on the provider to submit invoices and/or reconciliation accounts and on the commissioner to validate these, paying uncontested elements promptly in line with the timescales set out in the Contract and challenging any contested elements through the process set out in SC36.30.
- 46.23 Note that guidance about technical aspects of financial reconciliation and invoice validation is available at https://www.england.nhs.uk/ig/in-val/. This provides advice on how to ensure that any processing of Personal Confidential Data, for the purposes of invoice validation, is undertaken lawfully.

Applicability and payment of CQUIN

Paragraphs 46.24-29 below describe the arrangements for CQUIN which would normally apply. If the potential "pause" to CQUIN is confirmed following consultation, the arrangements below will not be relevant for 2024/25.

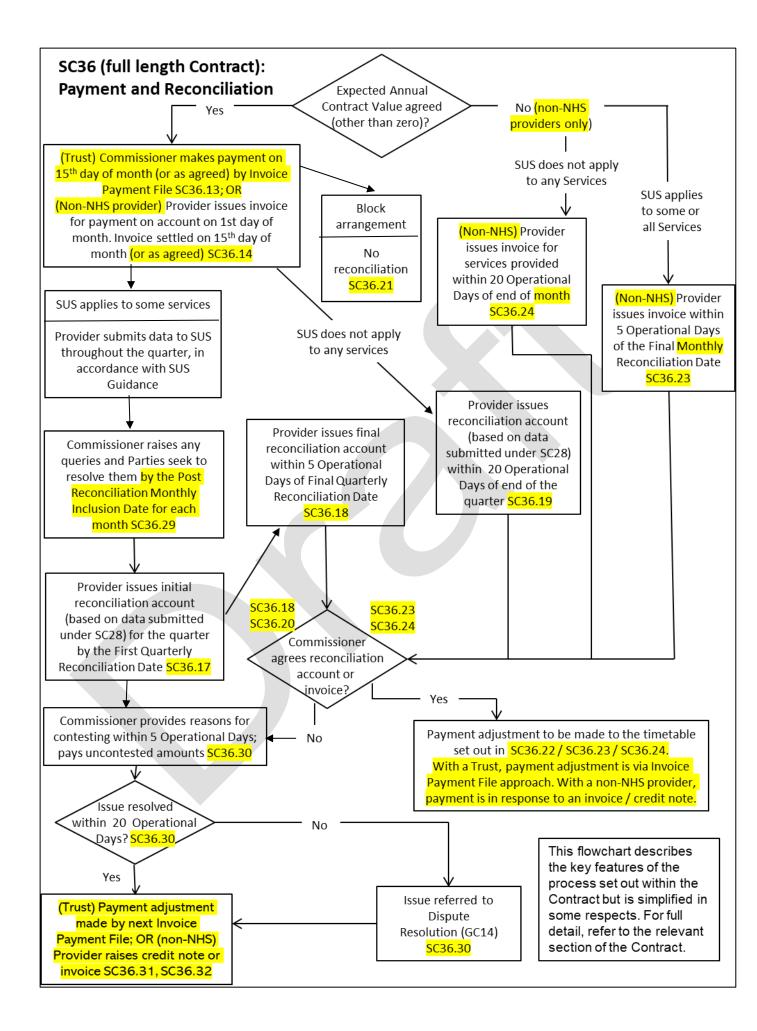

- 46.24 Under the NHS Payment Scheme for 2023/25, CQUIN is covered by the API rules and applies only to NHS Trusts and NHS Foundation Trusts, not to other providers. See the NHS Payment Scheme and <u>CQUIN Guidance</u> for further detail.
- 46.25 As described at paragraph 46.4 above, the value of the CQUIN scheme, for any individual commissioner-Trust relationship, will be 1.25% of the total of the fixed API payment <u>and</u> the amount included in the Expected Annual Contract Value in respect of elective activity.
- 46.26 This value is to be paid in full to the provider in advance in monthly instalments, as part of the EACV. The provider reports its CQUIN performance periodically to the commissioner (via the CQUIN Performance Report), and there is an annual financial reconciliation (via the CQUIN Reconciliation Account), through which the commissioner will claw back any underperformance, depending on the provider's performance against the CQUIN indicators include in Schedule 3F. These arrangements are set out in SC38 and are managed by the co-ordinating commissioner on behalf of the other commissioners.
- 46.27 Any claw-back of CQUIN is calculated by reference to the opening value described at paragraph 46.25 above. CQUIN payments do not need to be adjusted to reflect changes in actual elective activity levels compared to the opening planned value.
- 46.28 It is important to distinguish correctly between the CQUIN Performance Report and the CQUIN Reconciliation Account.
 - The CQUIN Performance Report is what demonstrates whether or not the provider has met the requirements of the relevant CQUIN indicators. If the commissioner wishes to challenge the content of the provider's CQUIN Performance Report (in other words, to disagree with the provider's report on

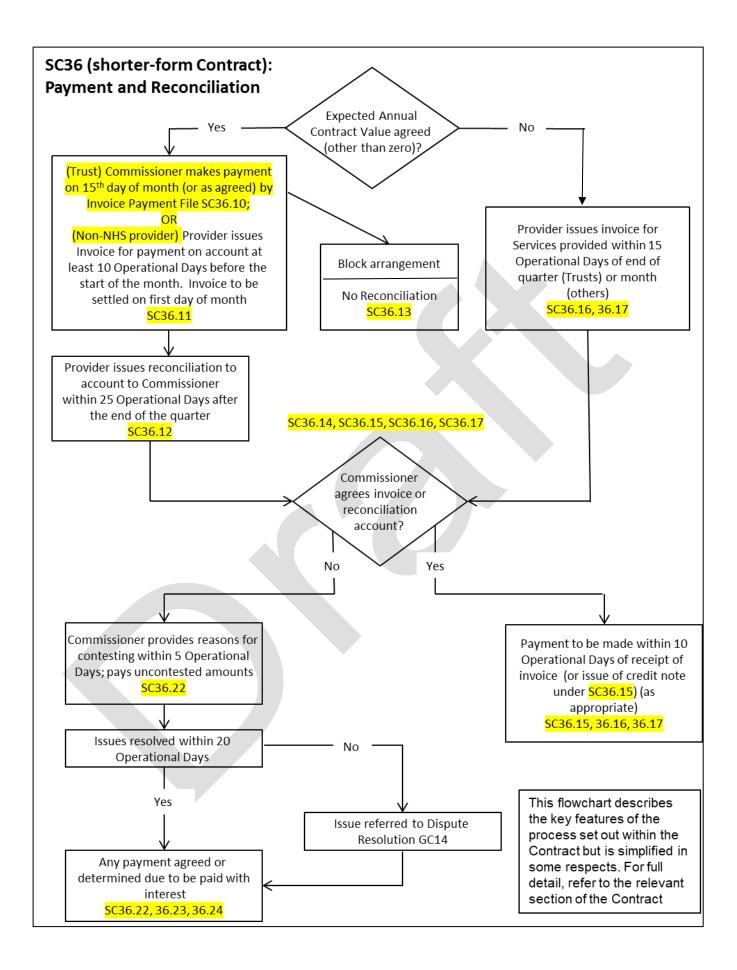

its own performance), it can do so under SC38.4 – but it must do this within ten working days of receipt of the CQUIN Performance Report.

- The CQUIN Reconciliation Account sets out the provider's calculation of the financial impact, for the full Contract Year, of the agreed outcomes from the various CQUIN Performance Reports which it has submitted during that year. Again, the commissioner can challenge the content of the CQUIN Reconciliation Account (under SC38.8 the deadline here being five working days from receipt).
- The key point is that the CQUIN Reconciliation Account can only be challenged in relation to whether it "gets the maths right"- that is, whether it sets out accurately what CQUIN payment the provider is entitled to, reflecting the payment on account made and the level of CQUIN performance demonstrated. A commissioner cannot use the CQUIN Reconciliation Account process to challenge whether, in fact, the provider met the requirements of the CQUIN indicators; this must be done in relation to each CQUIN Performance Report as it is submitted during the year, in accordance with the timescales set out in SC38.4.
- 46.29 CQUIN is not referenced in the shorter-form version of the Contract, and CQUIN does not apply to non-contract activity or in LVA arrangements.

Charging overseas visitors and migrants

- 46.30 SC36.26 (full-length Contract) / SC36.19 (shorter-form) contain requirements on providers relating to identification of, and collection of charges from, Service Users who are overseas visitors or migrants, reflecting the Regulations and guidance governing this area.
- 46.31 Current DHSC guidance in this area, referred to in the Contract, is available at https://www.gov.uk/government/collections/nhs-visitor-and-migrant-cost-recoveryprogramme. Resources for Trusts to help manage overseas visitors and migrant charging have been published by the Department of Health and Social Care and are available at <u>https://www.gov.uk/government/publications/help-for-nhs-to-</u> recover-costs-of-care-from-visitors-and-migrants.

47 Other contractual processes

The provisions in the **shorter-form Contract** for variation, dispute resolution, suspension of services, termination of the contract and exit arrangements are all significantly abbreviated and simplified. Where necessary, additional locally agreed requirements may be included at Schedule 2G. As with the full-length version, optional provisions relating to staff pensions rights can be included within the shorter-form Contract at Schedule 7 where necessary.

Variation

- 47.1 Arrangements for varying contracts are set out in GC13 (Variations). The only variations which may be made locally to contracts are variations to locally agreed insertions, selections or content of the Particulars. Nationally-mandated elements of the NHS Standard Contract may not be varied locally (GC13.3), and it is essential that commissioners and providers do not try to vary, depart from or disapply the terms of the NHS Standard Contract as nationally mandated from time to time.
- 47.2 As explained at paragraph 33 above, from 2022/23 onwards, the GCs and SCs now exist in their up-to-date form online, as published by NHS England from time to time, and will be incorporated into, and will apply automatically as part of, each local contract by reference. This will mean that it will not be necessary for contracts in the 2022/23 or later form to be updated periodically via local signing of mandatory National Variations. References to National Variations have therefore been deleted from GC13. However, see paragraph 22.2 above for advice on updating non-expiring multi-year contracts for subsequent years.
- 47.3 Commissioners and providers may agree Variations as permitted by GC13.3. The process for this is straightforward. In summary, the issuing party submits a draft Variation Agreement to the receiving party (a template is provided at https://www.england.nhs.uk/nhs-standard-contract/). The receiving party responds within ten operational days; there is discussion as necessary, and, if agreed, the final Variation Agreement is then signed by the co-ordinating commissioner and the provider, as set out at paragraph 21 above.
- 47.4 There is no specific period of notice which must be given for Variations. Rather, the agreed timescale for implementation should be set out in the Variation Agreement and should reflect the complexity of the issues involved and the time realistically needed to implement the specific changes proposed and, of course, when the parties wish the changes to take effect.
- 47.5 The general principle in GC13 is that Variations proposed by either commissioner or provider only proceed where the other party <u>agrees</u> to the proposed Variation but note the following points.
 - An exception to this is set out in GC13.3 (full-length Contract) and GC13.2 (shorter-form version). <u>Revised Standing Rules Regulations</u> will, once approved by Parliament, describe the circumstances in which, and the process by which, a provider of services to which patients' rights of choice

apply may ask a commissioner to assess it for the award of a contract – or for its existing contract to be "modified" (i.e. varied) – to allow it to deliver new "choice" services, or to deliver "choice" services which it already delivers from a new location or subject to new accessibility requirements. Where the commissioner's assessment criteria are met, the commissioner must award the provider an appropriate contract or agree an appropriate modification to the existing contract, as the case may be. GC13.3 (full-length) and GC13.2 (shorter-form) therefore now make clear that commissioner may not refuse to agree a modification to the provider's contract where doing so would be contrary to these amendments to the Standing Rules Regulations.

- Otherwise, where any form of Variation is rejected by either party and if that rejection is considered by the other party as a serious issue threatening the ongoing viability of the contract or of specific Services – the other party of course has the option of no-fault termination, on notice, under GC17 (GC17.2-3 in the full-length Contract, GC17.1-2 in the shorter-form version). Under the shorter-form Contract, this must be termination of the whole Contract (GC17.2), whereas under the full-length version there is also the option to terminate specific Services (GC17.2-3).
- Note also the specific termination right for the commissioner under GC13.13 and GC17.5 (full-length Contract only) in relation to any Service Variation refused by the provider. See the definition in the General Conditions for full detail, but a Service Variation is essentially a Variation which directly affects a specific Service. Where such a Service Variation is refused by the provider, the commissioner may terminate the affected Service by giving the provider not less than three months' written notice (or six months' written notice where the termination is likely to have a material adverse effect on the provider's staff).
- 47.6 Whenever a contract is being varied, the parties must ensure that they use, as the starting point for that Variation, the latest version of the contract (which may be the original contract or the contract as most recently updated by a signed and dated Variation Agreement). Parties to a contract should not progress more than one Variation to it in parallel or in competition with another, as doing so is likely to result in confusion and, potentially, dispute as to the terms of each proposed Variation and of the contract itself.
- 47.7 In relation to any variations, commissioners should take into account the provisions of regulations 13 and 14 of the <u>Health Care Services (Provider</u> <u>Selection Regime) Regulations 2023</u> (which apply to all healthcare contracts, whether awarded before or after the PSR coming into force and which limit the extent and scope of variations which may be made to existing contracts without readvertising the contract). A commissioner cannot refuse a variation where it is required to add a service or a new service location following a provider's request for assessment against the commissioner's qualification criteria under Choice rules: see regulation 42D of the <u>amended Standing Rules regulations</u>. The parties should seek their own legal advice before proceeding with any Variation which might be caught by the applicable regime.

Dispute resolution

- 47.8 The dispute resolution procedure (GC14) requires the parties in dispute to try to resolve their differences by negotiation, escalating to senior managers and then board-level representatives as required. If the dispute remains unresolved, the parties must refer it to mediation, under which the appointed mediator will attempt to facilitate the agreement of a satisfactory settlement of the dispute.
- 47.9 If mediation fails to resolve matters, the dispute must be referred to an independent expert for determination. The expert's ruling on the dispute will be binding on the parties.
- 47.10 The dispute resolution process at GC14 applies only once a contract is in operation. In relation to the agreement of new contracts, see paragraph 23 above.

Suspension

- 47.11 The provisions governing suspension of services are set out in GC16. It is worth commissioners reminding themselves of the scope which these provisions give to require a suspension, particularly when concerned about patient safety.
- 47.12 If commissioners and/or a regulatory body are concerned about the quality or outcomes of services being provided, or that the provider may not be meeting legal requirements (including, now, its duties in respect of the Fundamental Standards of Care), or about patient safety more generally, they should consider using commissioners' powers to require a suspension of services under the provider's contract. Services may be suspended until the provider is able to demonstrate that it can and will provide services to the required standard.
- 47.13 If considering exercising the right to require suspension of services on such grounds, commissioners should liaise with others commissioning services from the same provider, and of course with the regulatory authorities, with a view to acting in a concerted and consistent manner. Note that NHS England and other national organisations have published a <u>Joint Working Protocol</u>: when a hospital, services or facility closes at short notice.

Termination

47.14 The provisions for termination in GC17 cover different circumstances under which the contract may be terminated – for commissioner default, provider default or where there is no fault.

No fault termination (GC17.1 – 17.8) (GC17.1 – 17.3 in the shorter-form)

- 47.15 GC17 makes explicit the ability of the parties to terminate the contract at any time by mutual consent.
- 47.16 It also provides for flexibility in the notice period required for either the provider or the co-ordinating commissioner (on behalf of all commissioners) to terminate the contract, or a particular service, in circumstances where neither is at fault. The notice period required for no fault termination is for local agreement (at the outset of the contract).

- 47.17 Under the full-length Contract, different periods of notice may be agreed for provider-instigated and co-ordinating commissioner-instigated termination, and the parties may agree that the right to terminate voluntarily may not take effect before a specific date (i.e. that the contract must be allowed to run for at least a set period of time before being terminated).
- 47.18 See paragraph 47.5 above in relation to termination under GC13.13 / GC17.5 where the provider refuses to accept a Service Variation to the contract.
- 47.19 Under GC17.8 (GC17.3 in the shorter-form), there is a right for the co-ordinating commissioner to terminate (on a no-fault basis) in specific circumstances as required by the Public Contracts Regulations (or equivalent provisions under the proposed NHS Provider Selection Regime).

Termination for commissioner default (GC17.9) (GC17.4 in the shorter-form)

47.20 The provider may terminate the contract (as a whole or in respect of the relevant commissioner only) in the event of significant late payment or material breach on the part of a commissioner.

Termination for provider default (GC17.10) (GC17.5 in the shorter-form)

47.21 The Contract sets out (in abbreviated form in the shorter-form) the grounds of provider default on which the co-ordinating commissioner (on behalf of all commissioners) may terminate the contract or a service.

Consequences of expiry or termination

- 47.22 GC18 contains provisions governing what is to happen when the contract expires or is terminated, the primary objective of which is to ensure that the parties act in such a way as to effect a smooth transition of services and provider, with least inconvenience or risk to patients. This may involve the agreement (on or just before expiry or termination) of a Succession Plan (which might deal with patient handover, staffing matters, handover of premises and equipment and so on) with a new provider, and if so, all parties will be required to comply with their obligations under that plan.
- 47.23 Commissioners must ensure that they put in place clear arrangements with incoming and outgoing providers for the maintenance and storage of patients' health records at the expiry or termination of a contract. SC23.2 enables the commissioner to require an outgoing provider to deliver such records to a new provider (where they may be needed to support ongoing delivery of care or require storage until they have met the required retention period) but, when putting in place the contract with an incoming provider, the commissioner itself must build into that contract clear requirements as to whether that provider will be expected to receive, store and maintain ongoing and/or historic records transferred from the outgoing provider. In that way, a situation will be avoided where neither the outgoing nor the incoming provider will take responsibility for records storage.

Exit arrangements

- 47.24 The parties may agree, at the outset of the contract, more wide-ranging actions and consequences to take effect on expiry or termination of the contract. These may include:
 - arrangements in relation to staff and TUPE, supplementing the provisions of GC5;
 - arrangements in relation to staff redundancies;
 - arrangements for transfer of freehold or leasehold premises, or of major items of equipment;
 - requirements for exit payments to be made by commissioners or by the provider, depending on the circumstances in which the contract (or provision of a service) comes to an end; and/or
 - arrangements for the secure transfer of active and inactive Service User Health Records to the incoming Provider or to any third-party Provider.
- 47.25 Any such arrangements should be set out, as clearly as possible, in Schedule 2I (Exit Arrangements) (or Schedule 2G (Other Local Agreements, Policies and Procedures of the shorter-form Contract).
- 47.26 GC18.2 provides a right for commissioners, if the contract or a service is terminated for provider default, to recover from the provider additional costs they incur (over and above what they would have paid the provider) to secure provision of the relevant services for six months following termination.
- 47.27 Commissioners may feel it appropriate (depending on the nature of the contract and the relationship with the provider) to supplement this provision by including in Schedule 2I (or Schedule 2G of the shorter-form Contract) requirements for:
 - payment of additional compensation by the provider to the commissioners in the event of termination for provider default, or of voluntary termination by the provider; and/or
 - payment of compensation by the commissioners to the provider in the event of termination for commissioner default, or of voluntary termination by the commissioners (for example, to compensate the provider for otherwise irrecoverable capital expenditure incurred in the expectation of the contract running its full term).
- 47.28 Commissioners should consider taking expert legal and financial advice before agreeing exit arrangements and should refer to <u>Treasury guidance</u>.

Change in control, novation and assignment

47.29 It is important to distinguish correctly between the provisions for change in control at GC24 and the arrangements under which a contract may be novated or assigned.

- The change in control provisions apply where the legal entity which holds the contract remains the same, but the effective control of that organisation (through voting rights at general meetings), usually as a result of a transfer of shares, changes hands. (Note that the change in control provisions do not apply where the provider is a public company listed on a stock exchange.)
- By contrast, where the intention is that one of the legal entities which are a party to the contract should change, the process of assignment or novation may be considered, for which the consent of the co-ordinating commissioner is required. See paragraph 38.2 above.

TUPE (Transfer of Undertakings (Protection of Employment))

47.30 Note that the Contract no longer includes an obligation on commissioners (previously at GC5.16 in the 2015/16 Contract) to use reasonable endeavours to procure TUPE indemnities from an incoming provider in favour of the outgoing provider. This is because the "chain" of indemnities from outgoing and incoming providers (now at GC5.14 to 5.17) is now well-established: incoming and outgoing providers are given rights to enforce those indemnities directly by GC29 (Third Party Rights).

New Fair Deal for staff pensions

- 47.31 The Department of Health and Social Care has published <u>guidance</u> on the treatment of staff pensions on the transfer of staff from public bodies to the independent sector. The NHS Standard Contract includes provisions in line with that guidance:
 - An entitlement under GC17.10.16 (GC17.5.7 in the shorter-form) for the coordinating commissioner to terminate the contract if the NHS Business Services Authority notifies the commissioners that the provider or any subcontractor is materially failing to comply with its obligations under the NHS Pension Scheme (including those under any Direction/Determination Letter);
 - Schedule 7 (Pensions), at which commissioners may (in the appropriate circumstances i.e. where TUPE applies to transfer NHS staff to an independent sector provider or sub-contractor) include further provisions (template wording and guidance available on the <u>NHS Standard Contract</u> webpage dealing with, among other things:
 - the provider's obligations to ensure that transferring staff are able to stay, or remain eligible to become, members of the NHS Pension Scheme;
 - > the offer of broadly comparable benefits, where appropriate; and
 - the treatment of pension benefits on expiry of termination of the contract or Services).

We strongly recommend that both commissioners and providers take expert legal advice in relation to NHS Pensions before seeking to use or amend Schedule 7.

Liability and Indemnity

- 47.32 We have received a number of queries in this area and have expanded this section of our Guidance in response.
- 47.33 GC11 (Liability and Indemnity) states that each commissioner is liable to the provider, and the provider is liable to each commissioner, and they are required to indemnify the other, in respect of losses, costs and claims suffered by one party as a result of the other's negligence or breach of contract. "Indemnify" means to protect someone from loss, costs and claims, by paying money to that person when a specified event happens.
- 47.34 Note that the acts and omissions of staff and sub-contractors are the responsibility of the provider for this purpose.
- 47.35 "Negligence" is an act or failure to act by a party which breaches a duty of care owed by that party to someone else. A provider, for example, will owe a duty of care to its patients, to its employees, and to visitors to its facilities, among others. The provider's actions or failures to act, whether in providing healthcare services or in maintaining its facilities and equipment, may cause physical injury or other harm to a person to whom the provider owes a duty of care. That may result in a claim for compensation by or on behalf of the person harmed, and – whether in relation to that claim or otherwise – may lead to expenses being incurred by a commissioner.
- 47.36 A "breach of contract" is a failure by a party to a contract to comply fully with its obligations under it. A provider, for example, may not deliver a commissioned service in accordance with the service specification in its contract, or may not provide information to a commissioner in the manner required and by the deadline set by its contract. In either case, the provider would be in breach of its contract. That breach of contract may cause the commissioner to incur costs in relation to further treatment for a patient, or in itself having to put information submitted by the provider into the format required by the contract. Note other examples given at paragraphs 42.42, 44.51 and 45.14 above.
- 47.37 If a commissioner or the provider incurs losses, costs or claims as a result of the other's negligence or breach of contract, the innocent party is entitled to be indemnified by the other (GC11.1, 11.2). Note however that each party must take all reasonable steps to minimise any losses, costs and claims for which it is entitled to be indemnified under the contract (GC11.12).
- 47.38 But the type of losses and costs which can be claimed from the other party under the contract will depend on whether they relate to death or personal injury or damage to property resulting from the negligence or breach of contract (in which case both direct and indirect losses and costs will be recoverable) or other effects of the negligence or breach of contract (in which case only direct losses are recoverable). (See GC11.1, 11.2 and the definition of "Losses".)
- 47.39 A direct loss is any loss that is the natural result of the breach or negligence in the ordinary course of events. An example of recoverable direct losses would be the additional costs incurred by the commissioner when arranging replacement clinical services to cover for the provider's failure to deliver services in accordance with its

service specification. Indirect losses are generally understood as losses that are not the natural result of the breach or negligence but arise from the particular or unusual circumstances of the case – the NHS Standard Contract definition of the term expands on this with examples.

- 47.40 A party to a contract is likely to need expert legal advice when considering whether another party is liable for losses it has incurred and exactly what may be recoverable from that other party.
- 47.41 Neither the provider nor a commissioner may cap or limit its liability to the other under the indemnities provided for under GC11, and the provider's liability is not limited to the amount it can recover under its insurance or other indemnity arrangements (on which see below).
- 47.42 If the parties agree, or it is decided through the dispute resolution process, that one party to a contract must pay money to the other under an indemnity obligation under the contract, the sum due can either be claimed from the first party as a one-off debt or be set off against any payment otherwise due to the first party from the party that has suffered the loss – see SC36.33. For example, if the provider has breached its contract and the commissioner has incurred a direct loss as a consequence, the commissioner may deduct its loss from the sum otherwise payable to the provider for services delivered.
- 47.43 The provider must put in place, and keep in place, insurance or other "indemnity arrangements" to cover its potential liabilities to patients and their dependents for negligence in providing or failing to provide healthcare, to its employees, to visitors and other members of the public. The provider may be providing other, non-clinical services, and if so it must maintain indemnity arrangements in respect of those as well. The provider must ensure that its sub-contractors have appropriate cover too. The provider must not require its employees to bear the cost of indemnity arrangements (GC11.3).
- 47.44 The commissioner's interest in these arrangements is in having comfort (i) that there is cover in place to meet patient and other claims should they arise and (ii) that the risk of such claims jeopardising the financial viability of the provider is mitigated.
- 47.45 NHS Resolution has published helpful <u>guidance</u> for NHS commissioners of clinical services seeking to ensure that providers with which they are proposing to contract have in place adequate indemnity arrangements.
- 47.46 Independent sector providers will typically have in place commercial insurance policies to cover public liability and employer's liability (insurance for the latter being a legal requirement).
- 47.47 NHS Trusts and NHS Foundation Trusts instead rely on <u>NHS Resolution's</u> <u>Liabilities to Third Parties Scheme</u> (LTPS) to cover these risks. Membership of this scheme is not open to other types of provider.
- 47.48 NHS Trusts and NHS Foundation Trusts rely on NHS Resolution's <u>Clinical</u> <u>Negligence Scheme for Trusts</u> (CNST) to cover potential liabilities for clinical negligence. Membership of this scheme is also available to other types of

provider. Where a CNST member sub-contracts services under its NHS Standard Contract, the indemnity cover provided by that member's CNST membership extends to clinical negligence liabilities of the sub-contractor.

- NHS Resolution's Clinical Negligence Scheme for General Practice (CNSGP) 47.49 provides cover for clinical negligence in respect of activities carried out in connection with the delivery of primary medical services under GMS, PMS or APMS arrangements. This includes primary medical services provided under an APMS 'bolt on' arrangement included in Schedule 2L to an NHS Standard Contract. But note that if Schedule 2L is included in an NHS Standard Contract. the primary medical services to be provided under it must be clearly described in that Schedule: CNSGP cover will generally only apply to those specified primary medical services, and not to services commissioned under the composite NHS Standard Contract/APMS contract more generally. Under no circumstances should Schedule 2L be included in an NHS Standard Contract if none of the services to be delivered under that contract are primary medical services. CNSGP also covers activities connected to the provision of services other than primary medical services when they are carried out by the holder of a GMS, PMS or APMS contract and are ancillary to the services carried out under that GMS, PMS or APMS contract – and those ancillary services may be all or some of the services commissioned from that provider under a separate NHS Standard Contract. Where CNSGP covers activities under an NHS Standard Contract it will also cover activities of any sub-contractor involved in those activities.
- 47.50 Detailed queries on eligibility for or coverage of CNST, CNSGP or LTPS should be directed to NHS Resolution: <u>Contact - NHS Resolution</u>.
- 47.51 Commissioners should require their providers to produce evidence of appropriate insurance or other indemnity arrangements in respect of the provider and its sub-contractors (at the latest) as a condition precedent to service commencement (see Schedule 1A) and at regular intervals during the contract term (see GC11.4). Appropriate evidence might comprise confirmation in writing of membership of CNST, CNSGP and/or LTPS, and/or current insurance policy schedules, as appropriate. Where commercial insurance is being relied upon by the provider, the commissioner should ensure that it is satisfied that the sums insured (per claim and in aggregate) are adequate given the nature of the services and facilities, staff numbers etc, and that any excesses payable or exclusions from cover are acceptable. If in doubt, commissioners should seek advice from a reputable insurance broker.
- 47.52 It is very important that cover is maintained to meet claims made after (sometimes long after) a Contract expires or is terminated in respect of treatment delivered under it. That is why GC11.7 (GC11.3 in the shorter-form Contract) requires the provider to ensure that its indemnity arrangements to cover liabilities to patients remain in force "until … liability may reasonably be considered to have ceased" (in other words, until the statutory limitation periods on potential claims have expired).
- 47.53 We have, at the request of the Department of Health and Social Care and NHS Resolution, included, as GC11.8 (GC11.5 in the shorter-form Contract), a requirement to support the obligation under GC11.7/11.3 to ensure that "run-off" cover is in place. The provider must provide evidence that this cover is in place, and if it fails to do so the commissioner may put cover in place itself (which it

would do by paying the appropriate additional contribution to NHS Resolution for CNST cover)) and charge the provider for the costs incurred in doing so (and a commissioner may consider withholding payments due to the provider at or near the expiry or termination of its contract until satisfied that cover is in place, to ensure that funds are available to the commissioner if necessary). This is to address concerns that an independent sector provider may go out of business following expiry or termination of a contract, leaving "uninsured" potential claims for its clinical negligence, and both Service Users and the public purse therefore at risk.

48 Status of this guidance

48.1 This Contract Technical Guidance is intended to support commissioners in using the NHS Standard Contract and sets out clear expectations for how certain aspects should be addressed. In the event of conflict between this guidance document and the Contract, the terms of the Contract will prevail. Commissioners and providers should seek their own legal advice as necessary.

49 Advice and support

49.1 The NHS Standard Contract Team provides a helpdesk service for email queries. Please contact <u>england.contractshelp@nhs.net</u> if you have questions about this Guidance or the operation of the NHS Standard Contract in general. If you would like to be added to our stakeholder list to receive updates on the NHS Standard Contract, please email your contact details to <u>england.contractsengagement@nhs.net</u>.

Appendix 1 Summary guide to completing the Contract

This Appendix provides a summary of the key elements of the Contract which are for local agreement and completion prior to signature and a guide to some of the key clauses in the Contract. Initial advice on the general interpretation of NHS Standard Contract terms and use of the NHS Standard Contract is available through the NHS Standard Contract help email at: england.contractshelp@nhs.net.

The scope of the contract

The NHS Standard Contract (full-length or shorter form) may be used as:

- a multilateral contract to be entered into by a number of commissioners and a single provider; or
- a bilateral contract entered into by a single commissioner and a single provider.

For multilateral contracts, the roles and responsibilities table set out in the collaborative commissioning agreement will be used to identify the roles each commissioner will play in relation to the contract i.e. who will play the role of co-ordinating commissioner in respect of specific, or all, provisions in which the co-ordinating commissioner is mentioned.

The Contract contains provisions which are either:

- mandatory and non-variable, whether for all NHS services or only for specific types of service; or
- mandatory, but for local agreement and definition; or
- non-mandatory and for local agreement and definition.

As explained in paragraph 33 above, the General Conditions and Service Conditions (as published online by NHS England from time to time) will be incorporated in their <u>up-to-date online form</u> into, and will apply automatically as part of, each local contract by reference only. All of the **General Conditions**, as applicable from time to time, will be mandated and cannot be amended or deleted or disapplied locally. They apply to all services and to all providers of NHS funded clinical services. The **Service Conditions**, as applicable from time to time, will apply automatically to all services or to the relevant service, as indicated, and will be mandated for all services or the relevant service, as appropriate. The Service Conditions applicable to the relevant service cannot be changed, amended, deleted or disapplied locally. The **Particulars** contain all the elements in the contract that are for local completion, colour coded in this guide as 'amber' or 'green'. Action is required on all items that are amber coloured and must be completed prior to signing the contract. The parties must not leave any amber marked element for later completion.

Any element indicated as 'green' is optional and may be left blank, although for good practice and clarity any 'green' element that is not used should be marked as 'not applicable'.

Where a term in the contract is capitalised, this means that the term is defined in the definitions section at the end of the General Conditions. Text in red highlights where the position differs under the shorter-form Contract.

We are often asked about the best way of populating the Contract schedules and, particularly, about embedding documents within contracts. Our recommendation has always been that either

- text is entered in full into the relevant schedule itself, within the Particulars (this will work where the text is reasonably brief); or
- the schedule contains a reference to a separate document or spreadsheet which is then appended to the contract as a separate attachment.

We envisage that most complex contracts will need a series of such attached schedules, often in EXCEL, and it is obviously vital that there is a clear audit trail so that there can be no doubt as to the agreed final versions. Where it can be avoided, we do not recommend an approach where an embedded document is inserted within a schedule. There is a risk that the embedded documents may become corrupted and cease to open, in which case the agreed wording is lost.

We are also asked about whether requirements which are not applicable to the services being commissioned may be deleted from the Particulars. Our advice is as follows:

- Commissioners should not delete inapplicable requirements from the Particulars, in case of error. Any requirements which are not applicable to the services being commissioned are simply 'read over'.
- Note that, in some of the schedules within the Particulars, guidance notes are included in italics. These should be deleted locally when the Particulars are completed.

Front page		
Contract reference	Enter a local contract reference number or identifier	
Particulars		
Date of Contract	Once the contract has been signed on behalf of all parties, that has been confirmed to all parties and all parties have agreed that the contract should be dated, that day's date must be inserted as the Date of Contract. This is the date the contract is legally executed and is not (necessarily) either the date from which it has been agreed it will be effective (the Effective Date) - or the date on which services start to be provided under it (the Service Commencement Date).	
Service Commencement Date	Enter the date when the services actually start delivery. This will usually be 1 April in the relevant year but will be the date agreed between the Commissioner and the Provider (the Expected Service Commencement Date) or the date on which any Conditions Precedent to Service Commencement (see GC3 and Schedule 1A) are satisfied, whichever is later. (See further below.)	
Contract Term	Enter the initial contract term, excluding any potential extension period (which may be stated in Schedule 1C), and the date on which that term begins (usually the Expected Service Commencement Date). Commissioners should refer to paragraphs 18-19 above regarding contract duration and any provisions to extend the contract.	
Commissioners	Enter the full legal name and address of each commissioner organisation (ICBs, NHS England and, if appropriate, the local authorities) which will be a commissioning party to the contract. Include the relevant ODS code for each as this will aid identification and is linked to the information flows. All Commissioners to this contract will need an ODS code. Information on ODS codes can be found at https://digital.nhs.uk/services/organisation-data-service	
Co-ordinating Commissioner	This is the Commissioner (or Commissioners) identified by the other Commissioners fulfilling the role (or roles) of Co- ordinating Commissioner for this contract. This links to Schedule 5C and the Collaborative Commissioning Agreement. Where the contract is a bilateral contract, the sole Commissioner will be the Co-ordinating Commissioner.	
Provider	Enter the full legal name, address and ODS code of the Provider.	
Contract award process	 The Commissioner(s) must record here whether the specific contract was awarded under the Public Contract Regulations; awarded under one of the different provider selection processes envisaged in the PSR; or called off under a specific framework compliant with regulation 18 of the PSR (such as the Increasing Capacity Framework). As explained in paragraph 3.12 above, this is for two reasons. As a general principle, as the NHS transitions from awarding healthcare contracts under the Public Contracts 	

 Regulations to doing so under PSR, it will be vital for commissioners to be clear under which process a particular contract has been awarded. The requirements of each regime are different, and the commissioner can of course be challenged for non-compliance. Note the expectation that procurements commenced prior to the date on which PSR takes effect must either be completed on the basis of existing procurement regulations and guidance (Public Contracts Regulations and Procurement, Patient Choice and Competition Regulations) – or abandoned and then restarted under the new PSR regulations and guidance. More specifically, being clear about which process has been used will have a direct bearing on the operation of General Condition 13 (Variations). The 2023 PSR Regulations allow (through regulations 13-14 described above) a broader range of "modifications" where the contract has been awarded under PSR direct award process A or B than where the contract has been awarded under other processes (including non-PSR processes). 		
above) a broader range of "modifications" where the contract has been awarded under PSR direct award process A or B than where the contract has been awarded		commissioners to be clear under which process a particular contract has been awarded. The requirements of each regime are different, and the commissioner can of course be challenged for non-compliance. Note the expectation that procurements commenced prior to the date on which PSR takes effect must either be completed on the basis of existing procurement regulations and guidance (Public Contracts Regulations and Procurement, Patient Choice and Competition Regulations) – or abandoned and then re- started under the new PSR regulations and guidance. Table of contents	The table of contents must not be changed.	
Contract		
Signatures	The contract must be signed by an authorised signatory of each Commissioner which is a party to it, and by an authorised signatory of the Provider. Refer to paragraph 21 above. The date on which each signatory signs, and their title or position with the relevant organisation, should be inserted beneath their signature where indicated. Insert additional signature blocks as required for the number of Commissioners that are party to the contract.	

Completion of the tables in the Particulars headed **Service Commencement and Contract Term** and **Services** will determine whether certain of the Service Conditions or the content of certain of the schedules apply to the contract.

Service Commenc	ement and Contract Term
Effective Date	Insert the date on which the contract is to take effect (i.e. the date on which the rights and obligations on the parties become operational). This will usually be the Date of Contract but could be a later date.
Expected Service Commencement Date	Enter the date (or dates) when the services are expected to start to be delivered. The Provider must satisfy all Conditions Precedent by this date. Services may not start until it has done so.
Longstop Date	This is the longstop date for satisfying Conditions Precedent. This should be no later than three months after the Expected Service Commencement Date in most instances. If the Longstop Date is reached and the Conditions Precedent have still not been met, the Co-ordinating Commissioner can then terminate the contract under GC17.10.1. The longstop date must not be used to 'park' issues which the parties have not

	been able to agree by the time of contract signature, for later resolution.
Contract Term	Enter the initial contract term excluding any extension period, and the date on which that term begins (usually the Expected Service Commencement Date).
Option to extend Contract Term	Indicate here whether the Commissioners are to have an option to extend the term of the contract (noting and complying with guidance at paragraph 19 above), and the length of the permitted extension(s).
Commissioner Notice Period GC17.2	Enter the Commissioner Notice Period for termination under GC17.2. (Not applicable in the shorter form, as the same Notice Period applies whichever party serves notice)
Commissioner Earliest Termination Date GC17.2	Enter the earliest date on which a commissioner notice to terminate may take effect. (Not applicable under the shorter form)
Provider Notice Period GC17.3	Enter the Provider Notice Period for termination under GC17.3. (Not applicable in the shorter form, as the same Notice Period applies whichever party serves notice)
Provider Earliest Termination Date GC17.3	Enter the earliest date on which a provider notice to terminate may take effect. (Not applicable under the shorter form)
Notice Period	Enter the notice period for termination by either the Co- ordinating Commissioner or the Provider.
Service Categories

	. If so, they are free to do so.	
Addresses for service		
of notices	relating to the contract should be sent.	
GC36	Telating to the contract should be sent.	
Frequency of Review	Insert the frequency of the contract review meetings	
Meetings	between the parties. The review meeting will focus on the	
GC8	quality and performance of the Services. The frequency of	
	the review meetings should reflect the nature of the	
	Services and the relationship between the parties. It is	
	· · · ·	
	recommended that the minimum frequency should be every six months.	
	(Not applicable to the shorter form; review meetings are to	
	be held on an ad hoc basis.)	

Commissioner	Insert for each Commissioner the name and contact details	
Representative(s)	of the person who will be the primary contact point for the	
GC10.3	Provider.	
	Where the ICBs have contracted with a commissioning	
	support service, then the name and the contact details of	
	the relevant contact point within the commissioning support	
	service may be entered.	
Provider	Insert the name and contact details of the person who will	
Representative	be the Provider's primary contact point for the	
GC10.3	Commissioners.	
Schodulo 1 Sorvia	Common comont	

Schedule 1 – Service Commencement		
A - Conditions	Insert details of any documents which must be provided	
precedent	and/or actions which must be completed by the Provider	
GC3, GC4	before it can start providing services. The items / actions on	
	the list should be provided / completed prior to the Expected	
	Service Commencement Date. Where this is not done by	
	the Longstop Date, the Co-ordinating Commissioner is able	
	to terminate the contract under GC17.10.1 (GC17.5.1).	
	quare brackets indicate that an item can be deleted at the	
	Commissioner's discretion. In relation to:	
	Sub-contracts, see paragraph 38 above	
	 Determinations / Direction Letters, see paragraph 47.31 above 	
B - Commissioner	Insert details of any specific documents that have to be	
Documents	provided by the Commissioner(s) to the Provider prior to	
GC4.2	Service Commencement.	
004.2	(Not applicable to the shorter form)	
C – Extension of	To be used only as described in paragraph 19 above.	
Contract Term	Where applicable, insert the extension period of the	
Contract Term	contract, as advertised to potential providers during the	
Schedule 2 – The Ser	procurement process.	
A - Service	Commissioners and Providers should agree Service	
Specifications	Specifications for all services commissioned under this	
opecifications	contract.	
2Ai – Service	See paragraph 36 above for further details.	
	Indicative requirements marked YES are mandatory	
Specifications –	requirements for any Provider of community physical and	
Enhanced Health in	mental health services which is to have a role in the delivery	
Care Homes	of the EHCH care model. Indicative requirements marked	
SC4.9	YES/NO will be requirements for the Provider in question if	
	so agreed locally – so delete as appropriate to indicate	
	requirements which do or do not apply to the Provider.	
	The EHCH model is to cover all CQC-registered care home	
	services, with or without nursing. Whether a specific care	
	home is included in the scope of the EHCH model will be	
	determined by its registration with CQC, which can be found	
	by filtering column C in the CQC's ' <u>care home directory with</u>	

	filters'. This directory is updated monthly. All care homes in this directory are in the scope of the EHCH service model. The specific care homes in that directory in respect of which the provider in question is to be involved in delivering the EHCH service model are to be agreed locally and listed in Schedule 2Ai where indicated.	
2Aii – Service Specifications – Primary and Community Mental Health Services SC4.10	Requirements shown are mandatory for any Provider of community mental health services which is to have a role in the delivery of the Primary and Community Mental Health Services Model. (Not applicable to the shorter form)	
B – Indicative Activity Plan (IAP) SC29.5, SC29.6 SC29.3	Insert any IAP identifying the anticipated indicative activity for each service (which may be zero) for the relevant Contract Year. See paragraph 42 above. The overall Indicative Activity Plan should include a breakdown of individual commissioner plans.	
C – Activity Planning Assumptions (APA) SC29.7	Insert any APA for the relevant Contract Year, specifying a threshold for each assumption. See paragraph 42 above for further details. (Not applicable to the shorter form)	
F – Clinical Networks SC26	Set out here any Clinical Networks in which the Provider is required to participate. If there are no relevant clinical networks applicable to the Services, enter 'not applicable'. (Not included in the shorter form, but if the Provider is to be required to participate in a Clinical Network the appropriate details may be included in Schedule 2G.)	
G – Other Local Agreements, Policies and Procedures SC25	If there are specific local agreements, policies and procedures with which the Provider and/or Commissioner(s) are to comply, enter details of them here.	
H – Transition Arrangements GC4	The contract Transition Period is the time between the Effective Date and the Service Commencement Date. There may be certain things that need to be done during that period in order that services commence smoothly. Details of any such arrangements should be inserted here. (Not included in the shorter form, but if necessary arrangements can be set out in Schedule 1A and/or Schedule 2G.)	
I – Exit Arrangements GC18.9	Where the parties agree specific payments to be made by one or more parties, and/or other specific arrangements which are to take effect, on the expiry or termination of the contract or termination or any service, these should be set out in this section. Where there are no exit payments or other arrangements, this section should be marked 'not applicable'. See paragraphs 47.24 – 47.28 above. (Not included in the shorter form, but if necessary arrangements can be set out in Schedule 2G.)	
J – Transfer of and Discharge from Care Protocols	Any local agreement or protocols relating to Service Users' transfer and discharge from various care settings should be set out here. There is no mandatory format for this.	

SC11	A single protocol will not necessarily satisfy the needs of all
	types of Service User. Equally, separate local requirements
	for each Commissioner will need to be balanced against the
	provider's ability to accommodate different protocols for
	similar service users. Ideally, a single set of protocols will
	apply to all Commissioners.
	Where any individual Commissioner needs different transfer
	and discharge protocols, the collaborative commissioning
	group should discuss.
	Several protocols may be tabled for agreement with the
	Provider. The exact number will be for negotiation but it is
	expected that providers and commissioners will agree a
	sufficient number of different protocols broadly to satisfy
	local requirements without over-burdening the provider's
	ability to deliver.
K – Safeguarding	The Provider's written policies for safeguarding children and
Policies and MCA	adults should be appended in Schedule 2K and may be
Policies	varied from time to time in accordance with SC32.
SC32	The policy should reflect the local multi-agency
	safeguarding policy.
L – Provisions	See paragraphs 26.3 and 34.4 above.
Applicable to Primary	(Not applicable to the shorter form. If a package of general
Medical Services	practice and secondary care services are being
	commissioned the full-length contract must be used, with
	Schedule 2L.)
M Development	
M – Development	This optional schedule allows the parties to set out specific
Plan for Personalised	actions which each will take to implement the universal
Care	model of personalised care and to support the roll-out of
SC10.1	personal health budgets. Further detail is provided within
	the schedule itself.
	(Not included in the shorter form.)
N – Health	This optional schedule allows the parties to set out specific
Inequalities Action	actions which each will take, aimed at reducing inequalities
Plan	in access to, experience of and outcomes from care and
SC13.9	treatment. Further detail is provided within the schedule
	itself.
	(Not included in the shorter form.)
Schedule 3 – Paymer	
A – Aligned Payment	Where the Aligned Payment and Incentives Rules apply,
and Incentive Rules	insert details as agreed locally for each relevant
SC36.3	Commissioner, as shown in the schedule itself.
	(Not included in the shorter form.)
B – Locally Agreed	For each Locally Agreed Adjustment which has been agreed
Adjustments to NHS	for this contract, copy or attach the template required – or
Payment Scheme	state 'not applicable'. Additional locally agreed detail may
Unit Prices	be included as necessary by attaching further documents or
SC36.4.1.2	spreadsheets.
C - Local Prices	Insert the detail of any Local Prices, entering text (or
SC36.4.2, SC36.6-10	attaching documents or spreadsheets) which, for each
	separately priced Service, as shown in the schedule itself.
D - Expected Annual	Insert the total Expected Annual Contract Value (EACV) for
Contract Values	each Commissioner (this will provide the basis of calculation

0000 40	af the mean the mean set of a subscription by mean to as
SC36.12	of the monthly payments or quarterly payments as
	appropriate). The EACV must not be seen as an upper or
	lower cap on the provider delivering choice services.
	Where there is no EACV or an EACV of zero, enter 'not
	applicable'.
E – Timing and	If the first or final Contract Year is not 1 April - 31 March,
Amounts of	enter the timing and amounts of payments here.
Payments in First	Where the first and final Contract Year is 1 April – 31 March,
and/or Final Contract	enter 'not applicable'.
Year	(Not included in the shorter form, but if necessary
SC36.15-16	appropriate provisions may be included in Schedule 3C.)
F – CQUIN	Where the Aligned Payment and Incentives Rules apply,
SC38	include here the relevant national CQUIN indicators, in
	accordance with NHS Payment Scheme Guidance and
	CQUIN Guidance. Note that, if the potential "pause" of
	CQUIN for 2024/25 is confirmed, as described in paragraph
	46 above, this Schedule will not need to be completed in
	any contract for 2024/25.
	(Not included in the shorter form.)
Schedule 4 – Local C	
Local Quality	Commissioners may wish to agree additional quality
Requirements	requirements with the Provider. Where these are agreed,
	they should be recorded here. See also paragraph 39
	above.
Schedule 5 – Govern

Schodulo 6 - Contrac	
	t Management, Reporting and Information
A - Reporting	This table is used to set out the information that is required
Requirements	to be reported under the contract. See also paragraph 43
SC28	above.
B - Data Quality	This table is used to record any agreed DQIP. See
Improvement Plans	paragraph 43 above, which sets out certain situations in
(DQIP)	which a DQIP <u>should</u> be included.
SC28.18	(Not included in the shorter form.)
C – Service	This table is used to record any agreed Service
Development and	Development and Improvement Plan. See paragraph 41
Improvement Plans	above, which sets out certain situations in which an SDIP
SC20	
3020	should be included.
	(Not included in the shorter form.)
D – Surveys	Insert here the requirements for frequency, reporting and
SC12.6	publication of any locally agreed surveys.
	(Not included in the shorter form.)
Schedule 6E – Data P	Processing Services
Data Processing	This schedule is to be read and completed in conjunction
Services	with the Provider Data Processing Agreement. This
	schedule must be completed (and the terms of the Provider
Annex B, Service	Data Processing Agreement will apply) only where the
Conditions, Provider	Provider is acting as a Data Processor on behalf of one or
Data Processing	more of the Commissioners. Otherwise state Not
•	
Agreement	Applicable.
	For shorter-form contracts, Schedule 6E will need to be
	added manually to the local contract where the Provider is
	acting as a Data Processor on behalf of one or more of the
	Commissioners. For this purpose, a separate Schedule 6E
	(including the Provider Data Processing Agreement itself)
	has been published at https://www.england.nhs.uk/nhs-
	standard-contract/
	Update: International Transfers of Personal Data
	In the last way there have been needed and the second
	In the last year there have been regulatory changes
	concerning international transfers of personal data from the
	UK. The circumstances in which commissioners or
	providers transfer personal data to recipients abroad are
	likely to be limited. However, where such arrangements are
	in place or proposed they must comply with UK GDPR
*	requirements as described on the Information
	Commissioner's Office (ICO) website. The following
	overview is provided for information only and should not be
	relied upon by commissioners or providers when
	considering international transfers: specialist legal advice
	(including as to any necessary additional information to be
	included in Schedule 6E) should be taken in those
	circumstances.
	Where a transfer is to a country recognised by the UK as
	having adequate arrangements for the protection of

personal data, the transfer can be made on the same terms as if the transferee was located in the UK. All EU Member States and EU institutions and agencies are recognised by the UK as having adequate arrangements for data protection. A list of additional countries to which full or partial adequacy decisions apply is published on the ICO website. It should be noted that the USA is not included in this list.
Where a transfer is to a country which has not been recognised by the UK as having adequate data protection arrangements, the data controller will need to undertake a Transfer Risk Assessment (TRA) to determine whether adequate safeguards can be put in place to facilitate the transfer. The most commonly used safeguard is likely to be an International Data Transfer Agreement (IDTA). The ICO website provides comprehensive guidance on the use of TRAs and the IDTA.
IS
Please refer to paragraph 47.31 above.
Applicable to the shorter form only. It may in certain circumstances be appropriate to omit the text of this schedule or to amend it to suit the circumstances - in particular, if the prospect of employees transferring either at the outset or on termination/expiry is extremely remote because their work in connection with the subject matter of the Contract will represent only a minor proportion of their workload. However, it is recommended that legal advice is taken before deleting or amending these provisions.

Appendix 2 Supplementary definitions

This Appendix provides definitions for certain of the National Quality Requirements set out in Annex A of the Service Conditions.

For the other national requirements within Annex A, definitions are set out (or linked to) in Annex A itself.

E.B.S.6: Urgent operations cancelled for a second time

E.B.S.6: No ur	rgent operation should be cancelled for a second time
Definition	Include all urgent operations that are cancelled, including emergency patients (i.e. non-elective), who have their operations cancelled. In principle the majority of urgent cancellations will be urgent elective patients, but it is possible that an emergency patient has their operation cancelled (e.g. patient presents at A&E with complex fracture which needs operating on, but patient's operation is arranged and subsequently cancelled).
	The definition of 'urgent operation' is one that should be agreed locally in the light of clinical and patient need. However, it is recommended that the guidance as suggested by the National Confidential Enquiry into Perioperative Deaths (NCEPOD) should be followed. Broadly these are: Immediate - Immediate (A) lifesaving or (B) limb or organ saving intervention. Operation target time within minutes of decision to operate. Urgent - Acute onset or deterioration of conditions that threaten life, limb or organ survival. Operation target time within hours of decision to operate. Expedited - Stable patient requiring early intervention for a condition that is not an immediate threat to life, limb or organ survival. Operation target time within days of decision to operate. Elective - Surgical procedure planned or booked in advance of routine admission to hospital.
	Broadly, Immediate, Urgent and Expedited should be regarded as 'urgent' for the purpose of meeting this requirement. The full text of the <u>NCEPOD</u> Classification of Interventions is available online.
	An operation which is rescheduled to a time within 24 hours of the original scheduled operation should be recorded as a postponement and not as a cancellation. For postponements, the following apply: the 24 hour period is strictly 24 hours and not 24 working hours, i.e. it includes weekend / other non-working days; the patient should not be discharged from hospital during the 24 hour period; a patient cannot be postponed more than once (if they are then they count as a cancellation).
Rationale	Improved patient experience and patient outcomes.

Numerator	Number of urgent operations that are cancelled by the provider for non-clinical reasons which have already been previously cancelled once for non-clinical reasons.
Denominator	N/A
National data source	NHS England, monthly situation report (SitRep) collections https://www.england.nhs.uk/statistics/statistical-work-areas/critical- care-capacity/
Calculation	N/A
Operational standard	Operational standard is 0.

E.B.S.8: Ambulance service crew clear time following handover

	ulance crew delays of over <mark>15 minutes following clinical</mark> ospital (including A&E) or Urgent Treatment Centre
Definition	The guideline is that, following handover, the ambulance crew should be ready to accept new calls within 15 minutes. Data is collected to monitor the duration of time following clinical patient handover to crews becoming available.
	Handover Clock Stop: As defined in the <u>AmbSYS specification</u> , the time at which clinical handover has been fully completed (ambulance service) and the patient has been physically transferred onto hospital apparatus. Ambulance apparatus must have been returned enabling the ambulance crew to leave the department.
	Crew Clear: Crew Clear performance (ambulance service) and the ambulance turnaround process as a whole: the time at which the ambulance crew has repatriated equipment, finalised paperwork, restocked where appropriate and cleaned the vehicle ready for the next call.
	Count all accident, emergency and urgent patients being handed over to A&E departments, to Urgent Treatment Centres and to other hospital units (such as Same Day Emergency Care Units, Medical Admissions Units and Surgical Admissions Units). This includes GP urgent patients brought by ambulance to A&E and other hospital units. Do not count non-emergency patients. Patients being transported between locations / trusts / hospitals (e.g. for outpatient clinics, tertiary care) should not be counted.
Rationale	Delays in crews being ready to respond to further calls after handover are not acceptable. There are risks to patients in the community who are not able to receive a 999 response whilst ambulances are waiting at A&E and other hospital units. Ambulance service capacity is severely constrained if crews do not promptly declare themselves clear to respond.
Numerator Denominator	Number of crew clear delays of over <mark>15</mark> minutes.
National	N/A
data source Calculation	N/A
Operational standard	Operational standard is 0. (Note that, in monitoring provider compliance, commissioners should make allowance for exceptional occasions where delays beyond 15 minutes will be justified, for instance where a vehicle requires additional cleaning following a severe bleed, multiple casualties or in order to meet infection control requirements.)

VTE risk assessment

All inpatient service users undergoing risk assessment for venous thromboembolism (VTE)

Definition	Inpatients aged 16 and over at the time of admission who have had a VTE risk assessment on admission to hospital using the clinical criteria of a national tool including: surgical inpatients; inpatients with acute medical illness (e.g. myocardial infarction, stroke, spinal cord injury, severe infection or exacerbation of chronic obstructive pulmonary disease), trauma inpatients or trauma patients discharged from A&E who are immobilised with a cast or brace; patients admitted to intensive care units; cancer inpatients; people undergoing long-term rehabilitation in hospital; patients admitted to a hospital bed for day-case medical or surgical procedures; private patients attending an NHS hospital.
	The following specific groups of patients are not covered by NICE NG89 and are therefore outside the scope of this data collection: people under the age of 16 at admission; people attending hospital as outpatients (other than patients admitted to a hospital bed for day-case medical or surgical procedures, as listed above); people attending hospital emergency departments who are not admitted as inpatients (other than patients being immobilised with a cast or brace); people who are admitted to hospital because they have a diagnosis or signs and symptoms of deep vein thrombosis (DVT) or pulmonary embolism.
Rationale	Improved outcomes for patients. Previous national CQUIN indicator included as a National Quality Requirement in the NHS Standard Contract for 2014/15 onwards, as described in NICE Guideline NG89 (https://www.nice.org.uk/guidance/ng89).
Numerator	Of the sample described below, the number who had a VTE risk assessment on admission to hospital using a tool published by a national UK body, professional network or peer-reviewed journal (including those whose needs for VTE prophylaxis were assessed using NICE guidance that requires universal VTE prophylaxis for a cohort).
Denominator	A locally audited random sample of 100 Service Users in each Quarter (subject to the exclusions described in the Definition section above). Note – where a provider chooses to do so, it may continue to report both Numerator and Denominator on the basis of total inpatients in each Quarter, rather than just a sample.
National data source	N/A
Calculation	Performance is calculated as the numerator divided by the denominator, expressed as a percentage.
Operational standard	Operational standard is 95%.

Sepsis identification, screening and treatment for Service Users presenting as emergencies

Proportion of Service Users presenting as emergency admissions who undergo sepsis screening and who, where screening is positive, receive IV antibiotic treatment within one hour of diagnosis	
Definition	Proportion of Service Users presenting as emergencies who
	undergo sepsis screening and who, where screening is positive,
	receive IV antibiotic treatment within one hour of diagnosis.
Rationale	Improved outcomes for patients. Previous national CQUIN indicator, included as a National Quality Requirement in the NHS Standard Contract for 2019/20 onwards.
Numerator	Of the sample described below, the number
	 who were screened for sepsis; <u>and</u>
	 who, if found to have suspected sepsis, received IV
	antibiotics within one hour of diagnosis.
	This timing starts from when the clinical decision maker has decided the patient has suspected sepsis, and stops when effective antibiotics have been administered.
Denominator	 A locally audited random sample of 50 Service Users in each Quarter this applies to all adult patients arriving in hospital as emergency admissions; who were appropriate, at the time of presentation, for screening for sepsis on the basis of the local protocol on NEWS2 (a score of greater than or equal to 5 plus a senior clinical decision-maker using their judgement to decide if it's likely that the patient has sepsis. Excluding those where an alternative diagnosis is clinically more likely, e.g. major trauma and where a patient's normal baseline NEWS2 is 5 or more).
National	N/A
data source	
Calculation	Performance is calculated as the numerator divided by the
	denominator, expressed as a percentage and is assessed on a random sample of 50 Service Users each Quarter. Providers with
	low activity should calculate performance on the basis of all
	suspected patients if there are fewer than 50 per Quarter.
Operational standard	Operational standard is 90%.

NB: standard excludes pregnant women and children aged under 16.

Sepsis identification, screening and treatment for inpatient Service Users

	Service User inpatients who undergo sepsis screening and creening is positive, receive IV antibiotic treatment within one osis
Definition	Proportion of Service User inpatients who undergo sepsis
	screening and who, where screening is positive, receive IV
Rationale	antibiotic treatment within one hour of diagnosis. Improved outcomes for patients. Previous national CQUIN
Rationale	indicator, included as a National Quality Requirement in the NHS Standard Contract for 2019/20 onwards.
Numerator	Of the sample described below, the number
	 who were screened for sepsis; <u>and</u>
	 who, if found to have suspected sepsis, received IV
	antibiotics within one hour of diagnosis.
	This time is a starte frame sub on the plinical desiries we have been
	This timing starts from when the clinical decision maker has decided the patient has suspected sepsis, and stops when
	effective antibiotics have been administered.
Denominator	A locally audited random sample of 50 Service Users in each
	Quarter
	 who were being treated in an inpatient ward; and
	 who, on the basis of a deterioration of their condition after
	admission, became appropriate for screening for sepsis on
	the basis of the local protocol on NEWS2 (a score of
	greater than or equal to 5, plus a senior clinical decision-
	maker using their judgement to decide if it's likely that the
	patient has sepsis. Excluding those where an alternative diagnosis is clinically more likely, e.g. major trauma and
	where a patient's normal baseline NEWS2 is 5 or more).
National	N/A
data source	
Calculation	Performance is calculated as the numerator divided by the
	denominator, expressed as a percentage and is assessed on a
	random sample of 50 Service Users each Quarter. Providers with
	low activity should calculate performance on the basis of all suspected patients if there are fewer than 50 per Quarter
Operational	suspected patients if there are fewer than 50 per Quarter. Operational standard is 90%.
standard	

NB: standard excludes pregnant women and children aged under 16.

E.B.S.3: Follow up from psychiatric in-patient care

E.B.S.3: The percentage of Service Users under adult mental illness		
specialties who were followed up within 72 hours of discharge from		
psychiatric in-	psychiatric in-patient care	
Definition	All people discharged from ICB-commissioned inpatient mental health services should be followed up within 72 hours.	
	This applies to everyone who is discharged from an ICB- commissioned adult mental health inpatient bed to their place of residence, care home, residential accommodation, or to non- psychiatric care. All avenues need to be exploited to ensure patients are followed up within 72 hours of discharge.	
Rationale	There is evidence that people are at greater risk of dying by suicide in the period shortly after discharge from hospital. The latest report in 2018 from The National Confidential Inquiry into Suicide and Safety in Mental Health (NCISH), which provides findings relating to people who died by suicide in 2006-2016 across the UK, showed that in 2016 there were 227 suicides in the 3 months after hospital discharge. This equated to 17% of all patient suicides that year. Further, the highest risk is shown to be in the first 2 weeks after discharge, with the highest number of deaths occurring on day 3. While the overall rate of post-discharge suicide has reduced since 2011, the proportion of people who died in the first week after	
	discharge did not change over the full reporting period (2006-2016). This provides compelling evidence that all patients are followed up within 3 days post discharge and the report recommends this as a key measure that services should take to reduce patient suicide risk. By completing follow up within 72 hours, providers are therefore supporting the suicide prevention agenda, ensuring patients have both a timely and well-planned discharge. While the central metric of the new standard focuses on timeliness of	
	follow up, the overarching expectation is that this will incentivise focus on overall quality of discharge planning and support. This is expected to have a direct impact on patient experience as well as outcomes.	
Numerator	Of the denominator, those who have a follow up within 72 hours (commencing at 12am the day after discharge).	
Denominator	Number of people discharged from an ICB commissioned adult mental health inpatient setting of the reporting period.	
National	Mental Health Services Dataset.	
data source		
Calculation	Performance is calculated as the numerator divided by the	
	denominator, expressed as a percentage.	
Operational Standard	The operational standard is 80%	

Waits in A&E from arrival to discharge, admission or transfer

	Service Users attending A&E who wait more than 12 hours odischarge, admission or transfer
Definition	Proportion of Service Users attending A&E who wait more than 12 hours from arrival to discharge, admission or transfer.
Rationale	Better patient experience and more appropriate clinical care.
Numerator	Number of Service Users attending A&E during the period who wait more than 12 hours from arrival to discharge, admission or transfer.
Denominator	Number of Service Users attending A&E during the period.
	 For both numerator and denominator: The measure is of the number of Service Users who have stayed in the A&E department for 12 hours or more since their arrival in the department. All waits in excess of 12 hours should be counted, regardless of whether the patient is admitted, transferred or discharged. The measure applies to all types of A&E department (types 1, 2 and 3). The clock starts from the point at which the patient enters the department breaches if they have not left the department by the time 12 hours has elapsed.
National data source	N/A
Calculation	Performance is calculated as the numerator divided by the denominator, expressed as a percentage.
Operational standard	Operational standard is no more than 2%.

Appendix 3 Which form of contract or agreement to use when

Some example scenarios are set out below to help organisations select the correct contract template.

Agreements between commissioners and providers

	Scenario	Recommended form
1	An ICB is commissioning a range of hospital inpatient and community mental health services from a local Trust.	The NHS Standard Contract (full-length version) must be used.
2	An ICB is commissioning and fully funding a single, community-based mental health service from a small charity.	The NHS Standard Contract must be used (use of the shorter-form version is recommended).
3	A charity provides a range of services and support for people with chronic disease. The local ICB does not commission any specific service from the charity, but wants to provide general financial support for its activities, to supplement its income from donations.	A grant agreement must be used (use of our <u>model version</u> is recommended, but not mandatory).
4	An ICB wishes to place an individual patient into an out-of- area care home for a package of NHS Continuing Healthcare.	The NHS Standard Contract must be used (use of the shorter-form version is recommended). (Where multiple placements are made into the same home, use of our <u>model Individual Placement Agreement</u> for each individual is recommended, alongside use of the NHS Standard Contract.)

	Scenario	Recommended form
5	An ICB wants to set up a service to provide blood pressure monitoring equipment for suitable patients to use at home. It intends to contract with a private company for this service. The company will supply and maintain the equipment, but will not be involved in patient treatment or in advising patients about their clinical care.	The NHS Standard Contract must <u>not</u> be used. Use of the <u>NHS terms and conditions for</u> <u>procuring goods and non-clinical services</u> (which comes in several versions) is recommended.
6	NHS England has delegated responsibility for commissioning primary medical services to an ICB. The ICB has identified a sub- group of its population which is under-provided for in terms of core GP services. It therefore wishes to commission a new provider to provide list-based GP services for that population, and is keen to open the opportunity up to the broadest range of potential providers.	The NHS Standard Contract must <u>not</u> be used. An APMS contract should be used – see <u>https://www.england.nhs.uk/gp/investment/gp-</u> <u>contract/</u> .
7	An ICB is commissioning a non- emergency patient transport service using taxis; the provider will not be required to register with the CQC.	The NHS Standard Contract must <u>not</u> be used. Use of the <u>NHS terms and conditions</u> for procuring goods and non-clinical services (which comes in several versions) is recommended. The ICB may consider using a suitable <u>Crown</u> <u>Commercial Services framework agreement</u> as the route through which to select a provider. The relevant framework agreement is likely to specify the form of contract to be used.
8	An ICB is commissioning a non- emergency patient transport service, using ambulances, for unwell patients requiring some level of clinical supervision; the provider will be required to register with the CQC.	The NHS Standard Contract <u>must</u> be used (in either full-length or shorter form version).

	Scenario	Recommended form
9	NHS England has delegated the function of commissioning primary medical services to an ICB. The ICB has identified a part of its area which is under-provided for, in terms of both routine GP services and urgent care. It therefore wishes to commission a provider to provide, <u>under a single contract</u> , both list-based and non-list-based GP services (primary medical services) and an open-access urgent care service (not primary medical services).	The NHS Standard Contract <u>must</u> be used, in the full-length version, <u>with Schedule 2L</u> <u>included</u> (the schedule which imports the relevant APMS provisions).
10	A local authority is commissioning NHS Health Checks from a GP Federation established as a Community Interest Company.	The local authority may choose its own form of contract. It may use the NHS Standard Contract if it wishes (and, if asked, we would recommend that it does so), but use of the NHS Standard Contract by a local authority in this scenario is not mandatory.
11	A local authority and an ICB are contracting jointly for a range of community-based health and care services, to be supplied by a private company. Each will sign, and make payments under, the contract with the provider.	The NHS Standard Contract <u>must</u> be used (in either full-length or shorter form version). Additional information can be included in local schedules as necessary to cover the specific requirements of the local authority.
12	A local authority and an ICB have agreed a s75 pooled budget, for a range of learning disability health and care services, under which the local authority is to act as lead commissioner, awarding contracts to providers in its own name only.	The local authority may choose its own form of contract. It may use the NHS Standard Contract if it wishes (and, if asked, we would recommend that it does so), but use of the NHS Standard Contract by a local authority in this scenario is not mandatory.

Sub-contracts and other agreements between providers

	Scenario	Recommended form
13	A Trust holds a full-length NHS Standard Contract with its local ICBs for elective and emergency acute hospital services. To maintain those services over the winter, it wishes to "buy in" additional capacity from a local independent sector hospital – so that it can arrange for appropriate patients to be transferred there for treatment.	The NHS Standard Contract must <u>not</u> be used. The Trust should instead put in place a sub- contract (use of our <u>template sub-contract</u> , in the full-length version, is recommended but not mandatory).
14	A Trust holds a full-length NHS Standard Contract with its local ICBs for elective and emergency acute hospital services. To maintain those services over the winter, it wishes to "buy in" additional capacity from a local independent sector hospital – so that it can arrange for appropriate patients to be transferred there for treatment – and does so via the Increasing Capacity Framework.	The NHS Standard Contract must <u>not</u> be used. The Trust must instead put in place a sub- contract, and use of our <u>template sub-</u> <u>contract</u> , in the full-length version, is mandatory .
15	A Trust contracts out cleaning services, including for clinical areas, to a private company.	The NHS Standard Contract itself must not be used – but nor should our template sub- contract be used, because that is designed for use when sub-contracting <u>clinical</u> services. Instead, use of the <u>NHS terms and conditions</u> for procuring goods and non-clinical services (which comes in several versions) is recommended. The Trust may consider using a suitable <u>Crown Commercial Services framework</u> <u>agreement</u> as the route through which to select a contractor. The relevant framework agreement is likely to specify the form of contract to be used.

	Scenario	Recommended form
16	A Trust arranges for a mobile scanner, owned by a private company and operated by that company's clinical staff, to visit the Trust's site weekly, in order to provide extra scanning capacity for the Trust's NHS patients (a clinical service).	The NHS Standard Contract must <u>not</u> be used. The Trust should instead put in place a sub- contract (use of our <u>template sub-contract</u> , in the full-length version, is recommended but not mandatory). The private company may propose that its own preferred form of sub-contract is used; any Trust in this situation should take its own legal advice before agreeing to do that. The key is for the Trust to ensure that the sub- contract protects it by "flowing down" to the sub-contractor the relevant terms and conditions of its NHS Standard Contract with its commissioners.
17	A Trust buys in a communications and PR service from a private company.	Use of the <u>NHS terms and conditions for</u> procuring goods and non-clinical services (which comes in several versions) is recommended. The Trust may consider using a suitable Crown Commercial Services framework agreement as the route through which to select a contractor. The relevant framework agreement is likely to specify the form of contract to be used.
18	Two NHS Trusts each rely on, and make payments to, the other for certain things in a mutual aid / collaboration arrangement. None of these things are "whole" clinical services; some relate to clinical time (where one Trust employs staff who spend some of their time working in the other Trust), some to non-clinical support services (where one provides a function such as HR which the other uses) and some to premises (where one uses buildings owned by the other to provide clinical services).	It is unlikely that any published template will be fit-for-purpose to document an arrangement which involves several types of contractual relationship (secondment, sub- contracting of non-clinical services, licence to use premises). It may be better to document the different arrangements separately, using the appropriate form in each case. Trusts may need to take their own legal advice on how best to document them.
19	A Trust "buys in" clinical staff from a neighbouring private hospital to work in its operating theatres, as part of clinical teams managed by the Trust.	This is probably best characterised as a staff secondment arrangement. Neither the NHS Standard Contract nor our template sub- contract should be used. The two parties will need to document the arrangement on a locally agreed basis.

	Scenario	Recommended form
20	Two or more Trusts arrange to deploy staff on a flexible basis across their respective sites and services.	This is probably best characterised as a mutual staff secondment or staff sharing arrangement, on which we recommend Trusts refer to <u>Enabling staff movement between</u> <u>NHS organisations: A toolkit for sharing staff</u> <u>appropriately and efficiently</u> .

Note that scenarios 13-16 above (and elements of scenario 18) all involve sub-contracting.

- For those scenarios, therefore, under GC12.1 of the Trust's NHS Standard Contract with its commissioners, prior written approval is required from the co-ordinating commissioner for the sub-contracting (and, at the commissioner's option, the sub-contract itself).
- Under GC12.4, it is for the co-ordinating commissioner to determine whether or not the sub-contracts are Material Sub-Contracts. Each Material Sub-Contract should be recorded in Schedule 5B of the Trust's NHS Standard Contract.
- The definition of a Material Sub-Contract set out at the rear of the General Conditions refers to "a Sub-Contract for the delivery of any clinical or clinical support service which comprises (irrespective of financial value) all of any Service, or a significant and necessary element of any Service, or a significant and necessary contribution towards the delivery of any Service". In that context, in our view, it would probably be appropriate for all of the sub-contracts at 13-17 to be considered Material Sub-Contracts.
